Mrs. Pedigo,

Per your request:

- 1) Attached is a picture of the drum containment behind the Lab.
- 2) Mechanic uses generic 'Fleet Products' non-chlorinated parts washing fluid.
- 3) Spent fluid gets mixed in with the used oil.
- 4) The two drums outside maintenance contain used oil and are labeled as such.
- 5) One of the two drums inside contains drained used oil filters, the other contains antifreeze and are labeled accordingly.
- 6) The fifth drum was an empty drum of hydraulic fluid and has since been removed and crushed.
