**APPLICATION FOR A HAZARDOUS WASTE PERMIT  
PART I – GENERAL  
TO BE COMPLETED BY ALL APPLICANTS**

Please Type or Print

**A. General Information**

1. Type of Facility in accordance with Part 270.13(a)

DISPOSAL

- Landfill     Land Treatment     Surface Impoundment  
 Miscellaneous Units    Type of Unit \_\_\_\_\_

STORAGE

- Containers     Tanks     Piles  
 Surface Impoundment     Containment Building  
 Miscellaneous Unit    Type of Unit \_\_\_\_\_

TREATMENT

- Tanks     Piles     Surface Impoundment  
 Incineration     Containment Building  
 Boiler / Industrial Furnace    Type of Unit \_\_\_\_\_  
 Miscellaneous Unit    Type of Unit \_\_\_\_\_

2. Type of application:

- Construction Permit  
 Operation Permit  
 Construction & Operation Permit  
 Research, Development & Demonstration (RD&D) Permit  
 Postclosure Permit  
 Clean Closure Plan  
 Subpart H Remedial Action Plan  
 Equivalency Demonstration

3. Revision Number: 0

4. Date current operation began, or is expected to begin: 01 / 31 / 1993

5. Facility Name Safety-Kleen Systems, Inc.

6. EPA/DEP I.D. No. FLD 984 171 165

7. Facility location or street address 600 Central Park Drive

8. Facility mailing address 600 Central Park Drive  
street or P.O. Box  
Sanford FL 32771  
city state zip

9. Contact person Jeff Curtis Telephone (561) 523-4719

Title Sr. Environmental Compliance Manager

Mailing address 5610 Alpha Drive  
street or P.O. Box  
Richardson Boynon Beach TX FL 75080 33426  
city state zip

E-mail address ieff.curtis@safetv-kleen.com

10. Operator's name Safetv-Kleen Svstems. Inc. Telephone (972) 265-2000

Mailing address 2600 North Central Expressway, Suite 200  
street or P.O. Box  
Richardson TX 75080  
city state zip

E-mail address ieff.curtis@safetv-kleen.com

11. Facility owner's name Safetv-Kleen Svstems. Inc. Telephone (972) 265-2000

Mailing address 2600 North Central Expressway, Suite 200  
street or P.O. Box  
Richardson TX 75080  
city state zip

E-mail address ieff.curtis@safetv-kleen.com

12. Legal structure  
 Corporation     Non-profit corporation     Partnership     Individual  
 Local government     State government     Federal government     Other

13. If an individual, partnership, or business is operating under an assumed name, specify the county and state where the name is registered.

County \_\_\_\_\_ State \_\_\_\_\_

14. If the legal structure is a corporation, indicate the state of incorporation.

State of incorporation Wisconsin

15. If the legal structure is an individual or partnership, list the owners.

Name \_\_\_\_\_

Address \_\_\_\_\_  
Street or P.O. Box city state zip

Name \_\_\_\_\_

Address \_\_\_\_\_  
Street or P.O. Box city state zip

4. Attach a topographic map which shows all the features indicated in the instructions for this part.
5. Is the facility located in a 100-year flood plain?  Yes  No
6. The facility complies with the wellhead protection requirements of Chapter 62-521, F.A.C.  Yes  No

**C. Land Use Information**

1. The present zoning of the site is Light Industrial.
2. If a zoning change is needed, what should the new zoning be? N/A.

**D. Operating Information**

1. Is waste generated on-site?  Yes  No
2. List the NAICS codes (5 to 6 digits) 562112
- \_\_\_\_\_
- \_\_\_\_\_

3. Use the codes and units provided in the instructions to complete the following table. Specify:

- a. Each process used for treating, storing or disposing of hazardous waste (including design capacities) at the facility, and
- b. The hazardous waste(s) listed or designated in 40 CFR Part 261, including the annual quantities, to be treated, stored, or disposed by each process at the facility.

PROCESS CODE	PROCESS DESIGN CAPACITY AND UNITS OF MEASURE	HAZARDOUS WASTE CODE	ANNUAL QUANTITY OF HAZARDOUS WASTE AND UNITS OF MEASURE
See Part 1 D.3			

*Part I*

*B. Site Information*

**3. FACILITY LAYOUT AND TRAFFIC PATTERNS**

The facility layout is shown in Figure 2.1-1. The non-building areas of the facility are paved with asphalt, or concrete, as noted on the site plan. Site photographs are provided in Appendix A.

Site traffic patterns are illustrated in Figure 2.1-2. The majority of the vehicular traffic and loading/unloading operation occurs at and near the return/fill area (Area A), which is paved with concrete. Approximately once per week a tractor trailer delivers containerized product and removes containerized waste for transfer to a Safety-Kleen TSDF. This truck backs up to the concrete dock, located on the north-western side of the facility in Area B, to load and unload containers. Areas A & D are used for the loading/unloading of transfer wastes, and containerized permitted wastes from local vans and trucks. The trucks dispatched from the recycle center to deliver parts washer solvent and pick up used parts washer solvent will perform these activities at the above-ground tank truck loading area (Area C) approximately every 20 days. Used oil loading/unloading will also take place in Area C.

U.S. 46, is the major access road to the facility. The access road is designed in accordance with engineering criteria appropriate for sustaining the traffic volume and loading for the industrial activities in this area. The vans that travel the routes daily between the service center and Safety-Kleen customers use the two-lane road within the industrial park (Central Park Drive). Traffic from this facility will have a minor impact on local traffic conditions.

*Part I*

*B. Site Information*

**4. SITE TOPOGRAPHY AND SURROUNDING LAND USE**

Figure 2.2-1 is a USGS topographic map showing the facility. Due to the small size of the site, all of the information requested in FDEP's application form cannot be placed on one map. Therefore, additional maps are provided here to present the additional information requested in the application form. Specific information requested in the permit application is provided below.

*100-Year Floodplain Area*

Based on information available from the Federal Emergency Management Agency (Figure 2.2-2), the central occupied portion of the property is outside of the 100-year flood zone. However, the north, west, and south perimeters along Smith Canal are located in the 100-year flood zone (Zone X).

*Surface Water Bodies Within One-Quarter Mile of the Facility Property Boundary (e.g., Intermittent Streams and Springs)*

Surface water bodies located within one-quarter mile of the facility property boundary include Lockhart Smith Canal, which runs along the northern, western, and southern boundaries of the site, as shown in Figure 2.2-1. Since the last photo revision of the Sanford Quadrangle map in 1988, development in the area has resulted in many man-made stormwater retention ponds being constructed in the vicinity of the site. These figures have been added onto Figure 2.2-1 based on manual annotation from publically available aerial photography of the site vicinity. The locations and shapes are approximate.

*Surrounding Land Uses*

Surrounding land uses are shown in Figure 2.2-3.

*Legal Boundaries of the Facility*

Figure 2.2-4 shows the property boundaries.

***Drinking Water Wells Listed In Public Records or Otherwise Known to the Applicant Within One-Quarter Mile of the Facility Property Boundary***

Information from FDEP's GIS application, Map Direct, is found on the Map Direct Area of Interest Report.

***Intake and Discharge Structures Within One Mile***

Information on intake and discharge structures within one mile of the facility is shown on the Map Direct Area of Interest Report.

***Run-Off Control System***

The facility's paved areas are sloped such that rainwater run-off is directed to the retention swales on the north and south sides of the property. Figure 2.2-5 illustrates the contours and anticipated surface water run-off direction. Overflow will discharge into the Smith Canal. Seepage from the swales percolates into the ground water and then into the same canal.

***Access Control (fences, gates, etc.)***

Figure 2.1-1 shows access control features.

***Injection and Withdrawal Wells Both On Site and Off Site***

There are no injection or withdrawal wells on site. Results of an inventory of wells Within one mile of the facility are presented on the Map Direct Area of Interest Report.

***Buildings and Other Structures***

Buildings and other structures are shown in Figure 2.1-1.

***Contours Sufficient to Show Surface Water Flow***

Figure 2.2-5 shows surface elevations at the facility. The site is nearly flat, with surface elevations in unpaved areas. Paved areas are at slightly higher elevations. Surface water flow is directed toward the drainage catchment basins shown in Figure 2.2-5.

***Loading and Unloading Areas***

Figure 2.1-2 shows loading and unloading areas in relation to the waste management areas.

***Hazardous Waste Units***

Figure 2.2-6 shows hazardous waste management units.

***Wind Rose***

A wind rose for Orlando, Florida is shown in Figure 2.2-7.

FLOODPLAIN MAP  
SAFETY-KLEEN SYSTEMS, INC.  
SANFORD, FLORIDA

**LEGEND**

**SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD EVENT**  
 The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AX, B, B1, and VE. The base flood elevation is the water surface elevation of the 1% annual chance flood.

**ZONE A** - No Base Flood Elevation Determined  
**ZONE AE** - Base Flood Elevation Determined  
 Flood depths of 1 to 3 feet (usually areas of ponding). Base Flood Elevation determined.  
**ZONE AH** - Flood depths of 1 to 3 feet (usually areas of ponding). Base Flood Elevation determined. An area of shallow (shallow) water. Flood depths determined.  
**ZONE AO** - Flood depths of 1 to 3 feet (usually areas of ponding). Base Flood Elevation determined. An area of shallow (shallow) water. Flood depths determined.  
**ZONE AR** - Special Flood Hazard Areas (SFHAs) protected from the 1% annual chance flood event by a flood control system that was substantially completed. Zone AR indicates that the former flood control system is being treated to provide protection from the 1% annual chance or greater flood.  
**ZONE AV** - Areas to be protected from the 1% annual chance flood event by a Federal flood protection system under construction; no Base Flood Elevation determined.  
**ZONE V** - Coastal flood zone with velocity hazard (wave action); no Base Flood Elevation determined.  
**ZONE VE** - Coastal flood zone with velocity hazard (wave action); Base Flood Elevation determined.

**FLOODWAY AREAS IN ZONE AE**  
 The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood height.

**OTHER FLOOD AREAS**  
**ZONE X** - Areas of 2% annual chance flood; areas of the annual chance flood with average depths of less than 1 foot (or less storage areas with 1 square meter) also areas protected by levees from the 1% annual chance flood.  
**OTHER AREAS**  
**ZONE B** - Areas determined to be outside the 1% annual chance floodplain.  
**ZONE C** - Areas in which flood hazards are undetermined, but possible.  
**COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS**  
**OTHERWISE PROTECTED AREAS (OPAs)**  
 CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

**1% annual chance floodplain boundary**  
**0.2% annual chance floodplain boundary**  
**Floodway boundary**  
**Zone A boundary**  
**CBRS and OPA boundary**  
 Boundary showing Special Flood Hazard Areas (SFHAs) with boundary showing Special Flood Hazard Areas of different Base Flood Elevation, Flood depths or flood velocities.

*Part I*

*D. Operating Information*

**2. DESCRIPTION OF FACILITY OPERATION**

*Description of the Business*

Safety-Kleen Systems, Inc. of Richardson, Texas is an international service oriented company whose customers are primarily engaged in automotive repair and industrial maintenance. Since 1968, Safety-Kleen has been offering a leasing service for petroleum-based hydrocarbon solvents and small parts washing equipment.

Safety-Kleen's solvent cycle is essentially a closed loop, moving from the Branch to the customer, from the customer to the Branch, from the Branch to the recycle facility, and then from the recycle center back to the Branch for redistribution to customers. This closed loop supplies Safety-Kleen with most of its solvent requirements (nearly two-thirds of the clean solvent delivered to the field has been previously used by its customers). Ownership of the solvent remains with Safety-Kleen. Solvent containers (product and waste) are transported in specially-equipped, enclosed route trucks. Five aboveground tanks are maintained at the Safety-Kleen Sanford facility. These tanks are used for storage of one-waste solvent, and one-product 150 Premium Solvent, two-Used Oil, and one-Used Antifreeze.

The Safety-Kleen parts washing equipment, together with the solvents are leased to customers; the leasing charge includes regularly scheduled solvent changes and machine maintenance. The business is conducted from local Branches (sales branches) located in 45 states. The Branches warehouse the products and equipment required to service the customers in their sales area. On a contractual basis, service representatives furnish clean solvent to the customers, pick up the used solvent, and ensure that the leased equipment is in good working order. In 1979, Safety-Kleen expanded their scope of operations to make their solvent leasing service available to owners of parts cleaning equipment, regardless of manufacturer, using Safety-Kleen's solvents.

*Revision 0 – 11/10/18*

Basically, Safety-Kleen handles two types of parts washers. The original service offered by the company in 1968 was the parts cleaner service and it remains the primary business activity. This service involves the leasing of a small parts degreasing unit which consists of a sink affixed to a container of parts washer solvent. On a regularly scheduled basis, a Safety-Kleen sales representative cleans and inspects the parts washer machine and replaces the container of used solvent with one of clean product. Safety-Kleen has also established a parts cleaner service for users who own their own machines. This service provides a solvent reclamation service to these customers regardless of machine model. All clean parts washer solvents are delivered to customers in containers. All spent parts washer solvents are transported from the customer to the Branch in containers.

Upon return of the spent solvent to the branch, the material is transferred from the containers to a wet dumpster. Most of the 150 solvent used by customers will be utilized by the Branch for the washing of used containers. After drums have been washed, the spent solvent is pumped into the waste solvent storage tank. Cleaned containers are filled with product solvent in preparation for the next day's services. Periodically, a tanker truck is dispatched from one of the Safety-Kleen TSDF's to deliver a load of clean solvent and collect the spent solvent at the Branch. Containers of clean solvent may be stored at the return/fill station or in the permitted storage areas. Containers of waste solvent may be stored in the permitted storage areas.

A second type of parts washer, the immersion cleaner, is available for the removal of varnish and gum from such things as carburetors and transmissions. This machine consists of an immersible basket with an agitator affixed to a container of the immersion cleaner. The spent solvent remains in the container after delivery to the Branch, where it is stored in a permitted storage area of the warehouse. Periodically, a tanker trailer truck is dispatched from a Safety-Kleen recycle TSDF to deliver fresh solvent and collect the containers of spent solvent for reclamation. Warehouse space is dedicated for the storage of clean immersion cleaner. The immersion cleaner remains in the original covered containers during transfer between the Branch and a Safety-Kleen/Clean Harbors TSDF.

*Revision 0 – 11/10/18*

Safety-Kleen provides a dry cleaning waste reclamation service where containers of dry cleaning wastes are collected and stored temporarily at the Branch before shipment to the TSDF centers for reclamation and processing. All dry cleaning wastes remain in their original containers while at the Sanford facility.

Safety-Kleen also provides a paint waste reclamation service. Wastes containing various thinners and paints are collected in containers and stored temporarily at the Branch before shipment to the TSDF centers for reclamation and processing. Paint wastes are managed as permitted wastes, and 10-day transfer wastes. All paint wastes remain in their original containers while at the Sanford facility.

Fluid Recovery Services (FRS) is a program managed by the Safety-Kleen Branch. Under this program, other types of waste are collected by the Branch and sent out to the TSDF centers. The FRS wastes are managed as transfer wastes. Examples of the types of wastes that may be received from FRS customers include:

- Spent hydrocarbon distillates, such as waste fuel, oil, petroleum, naptha, etc.
- Lubricating oils, hydraulic oils, synthetic oils, and machine oils.
- Industrial halogenated solvents such as 1,1,1-trichloroethane, tetrachloroethylene, Freon, and trichloroethane.
- Photographic and x-ray related wastes.
- Paint and lacquer thinners.
- Other hazardous and non-hazardous halogenated and non-halogenated wastes.

***10-Day Transfer Storage Area (FRS)***

The 10-day transfer storage area is located in the northern portion of the main warehouse, and the northwestern return/fill bay. Signage clearly marks these areas. All hazardous waste containers stored in the 10-day transfer area are manifested and in transit to other permitted facilities. Safety-Kleen Sanford is not the designated facility for wastes stored in the 10-day transfer area.

*Revision 0 – 11/10/18*

In 1990 Safety-Kleen began offering a service for the collection of spent antifreeze (ethylene glycol) from automobile service stations. This service is offered in conjunction with Safety-Kleen's used oil collection service. All used antifreeze collected and managed by Safety-Kleen within Florida is recycled. The trucks used to collect and transport waste ethylene glycol are the same trucks used for collection and transport of used oil. The trucks have more than one compartment so the antifreeze is picked up and stored in a separate compartment until off-load at the branch. At the customer locations, Safety-Kleen pumps used ethylene glycol and transports the material to the Branch for off-loading into a tank for storage. The ethylene glycol is held until shipment to be reprocessed into a pure product. This procedure is in accordance with FDEP's *Best Management Practices for Managing Used Antifreeze at Vehicle Repair Facilities*, dated May 22, 2012. In addition, Safety-Kleen sells its' own Khameleon private label antifreeze in 55-gallon containers. Customers will then place used antifreeze in these containers to be shipped back to the branch. This material is shipped to SK distribution centers, and then shipped to 3<sup>rd</sup> party recyclers.

Safety-Kleen offers a service for the collection of bulk used oil, commonly referred to as Safety-Kleen Oil Services (SKOS). Straight tanker trucks are used to collect and transport bulk used oil. After collection, the used oil is transported to the branch for storage. The Branch is registered as a used oil transfer facility, and may store used oil for more than 24 hours and less than 35 days. The used oil is then transported to the Safety-Kleen Ocala, FL facility. Used oil is subject to specific acceptance criteria prior to collection, and divided into three (3) groups.

**Group 1** used oils are derived from automotive sources (auto maintenance, auto retail, dealerships, fleet rental & leasing, quick lubes, marine transportation, mechanical & equipment service, taxi/bus/other local transportation, airlines, railroads, trucking & transportation companies, utilities – natural gas & propane distribution, telecommunications/cable, and water/sewer, etc.). Prior to collection, used oil at these Sites is field tested using a TIF Halogen Leak Detector. Used oil failing the TIF test for SQG/LQG generators will then be tested using the Dexsil Clor-D-Tect kit. Used oil

passing this test may be collected, and used oil failing this test may not be collected. It may be collected at a later date, provided a sample of the used oil has passed the rebuttable presumption for used oil using an analytical method from SW-846.

**Group 2** used oils are derived from non-automotive sources and may be acceptable if they receive approval from the Central Profile Group (CPG). Examples of group 2 oil sources are: (utility – electrical distribution/power generation, agricultural production, chemical manufacturing/distribution, electrical equipment & computer manufacturers, exploration – drilling/seismic, fabricated metal products, manufacturers – furniture/millwork/cabinets, fixtures/machine (including medical)/miscellaneous, mining/minerals, primary metal manufacturing, natural gas pipeline/processing, manufacturers – plastic/rubber/glass, oil & gas producers, oilsands mines/SAGD facilities, food & kindred products, manufacturers – asphalt/paper products & packaging materials/shoe/leather/textiles & apparel, printing, lumber/wood products, lumber mills, pulp & paper mills, biotechnology, pharmaceutical, refineries, ship builders, steel mills, asphalt terminal, liquid/petroleum, pipeline, liquid/petroleum terminal, manufacturers – transportation equipment, etc.) Group 2 used oils require a pre-qualification sample to be taken and submitted for analysis (Flash point, PCB's, Halogens, Silicone, and VOC's). Pre-qualification results must be approved prior to initial collection. If the generating process changes, or if no oil is picked up for over one year, a pre-qualification sample must be submitted for approval again. Field testing procedures are the same as the above group 1.

**Group 3** are any oils not falling into the Group 1/2 categories, and will not be accepted into the SKOS program. Examples of Group 3 oils are, but not limited to: (electrical insulating oil/transformer oil, gasoline, form release oil, rust preventatives, silicone heat transfer fluid, hydraulic oil dye, diesel fuel treatment, motor flushes, penetrating oil, kerosene, cooking oil, crude oil, distillate fuels, animal fats, TSCA regulated oils, urethane coating, etc.)

In 1996, the Branch became registered in Florida as a transporter and storage facility for

*Revision 0 – 11/10/18*

mercury-containing lamps and devices destined for recycling. This registration includes a commitment to comply with the regulations of Florida Administrative Code (FAC) 62-737.400. As a registered small quantity handler of universal waste lamps/mercury devices, the Branch can only store up to 2,000 Kg of lamps or 100 Kg of mercury-containing devices at any one time. Safety-Kleen provides customers with empty four-foot and eight-foot boxes which hold up to 39 lamps. Boxes containing lamps are picked up from customers and are handled at the Branch as non-hazardous transfer wastes. The boxes are stored at the Branch in a designated area, labeled in accordance with FAC 62-737.400(5)(b), and partially isolated from other transfer wastes to avoid potential for accidental breakage. The boxes are periodically shipped to a permitted mercury recovery or reclamation facility. Prior to shipment out of the Branch, the boxes are placed on pallets and shrink-wrapped with plastic. Safety-Kleen handles all types of batteries with the exception of lithium batteries. All applicable batteries, per 40 CFR Part 273.2 & 273.9, are managed in accordance with the Standards For Universal Waste Management found in 40 CFR Part 273. Batteries not meeting these standards may be managed as 10-day transfer hazardous waste.

Containers of hazardous waste are picked up at customer locations and transported back to the Branch in route trucks. Each route truck is equipped with a hand-truck and electric lift gate for movement of containers. Upon arrival at the Branch, containers are placed on pallets and moved by way of forklift to the appropriate areas. Containers of used parts washer solvent are unloaded at the return/fill area and are dumped by hand into the wet dumpster for transfer via piping to the hazardous waste used solvent tank. Forklifts are used for loading containerized hazardous waste containers onto trucks for transport to Safety-Kleen/Clean Harbors TSDF's.

Safety-Kleen constructed the Sanford Branch with the intent that it will be a long-term facility for the distribution of Safety-Kleen products. No on-site disposal activity occurs at the facility and, hence no disposal capacity will be exhausted that will necessitate closure of the facility. Based on current business and facility conditions, the Sanford facility is expected to remain in operation at least until the year 2035.

**PART I D.3 Process – Codes and Design Capacities**

Waste Type	Process Design Capacity (Gallons)	Process Code(s)	Estimated Annual Amounts (Tons)	Waste Codes
Spent Parts Washer Solvent	20,000	S01* S02**	374	D001 and D-codes listed in note below
Branch-Generated Liquids Solids (Debris)	6,912	S01*	9	D001 and D-codes listed in note below; F002, F003, F005
Dumpster Sediment	6,912	S01*	Included above	D001 and D-codes listed in note below
Tank Bottoms	6,912	S01*	Included above	D001 and D-codes listed in note below
Used Immersion Cleaner (IC 699)	6,912	S01*	6	D-codes listed in note below
Dry Cleaning Waste (Perchloroethylene)	6,912	S01*	7	F002 and D-codes listed in note below
Dry Cleaning Waste (Non-perchloroethylene)	6,912	S01*	Included above	D-codes listed in note below
Paint Wastes	6,912	S01*	18	D001, F003, F005 and D-codes listed in note below
Retain Samples From Used Oil Operations	6,912	S01*	3	D008, D018, D039, D040
Spent Aerosol Cans	6,912	S01*	< 1	D001, D035
Fluid Recovery Service (FRS)	14,080	S01***	100	Transfer wastes-waste codes assigned by generator
Aqueous Brake Cleaner	14,080	S01***	14	Transfer waste-waste codes assigned by generator
Mercury-Containing Lamps/Devices	N/A	N/A***	Less than 2.2	N/A-handled as non-hazardous transfer wastes

**NOTES:**

D-Codes: D004, D005, D006, D007, D008, D009, D010, D011, D018, D019, D021, D022, D023, D024, D025, D026, D027, D028, D029, D030, D032, D033, D034, D035, D036, D037, D038, D039, D040, D041, D042, D043

\* This waste will be stored in containers in the container storage area. The maximum capacity in the container storage area for hazardous waste is 6,912 gallons.

\*\* The spent parts washer solvent storage tank has a capacity of 20,000 gallons and may be filled up to 19,000 gallons.

\*\*\* This waste will be held for transfer in containers in the transfer area and designated mercury bulb storage area.

**APPLICATION FOR A HAZARDOUS WASTE FACILITY PERMIT  
CERTIFICATION  
TO BE COMPLETED BY ALL APPLICANTS**

**Signature and Certification**

Facility Name Safety-Kleen Systems, Inc.

EPA/DEP I.D. No. FLD 984 171 165

The following certifications must be included with the submittal of an application for a hazardous waste authorization. The certifications must be signed by the owner of a sole proprietorship; or by a general partner of a partnership; or by a principal executive officer of at least the level of vice president of a corporation or business association, or by a duly authorized representative of that person. If the same person is a facility operator, facility owner, and real property owner, that person can cross out and initial the signature blocks under "1. Facility Operator" and "2. Facility Owner," and add the words "Facility Owner and Operator" at the line "Signature of the Land Owner or Authorized Representative."

**1. Facility Operator**

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations. Further, I agree to comply with the provisions of Chapter 403, Florida Statutes, and all rules of the Department of Environmental Protection. It is understood that the permit is only transferable in accordance with Chapter 62-730, Florida Administrative Code (F.A.C.), and, if granted a permit, the Department of Environmental Protection will be notified prior to the sale or legal transfer of the permitted facility.

**2. Facility Owner**

This is to certify that I understand this application is submitted for the purpose of obtaining a permit to construct, operate, or conduct remedial activities at a hazardous waste management facility on the property as described. As owner of the facility, I understand fully that the facility operator and I are jointly responsible for compliance with the provisions of Chapter 403, Florida Statutes, and all rules of the Department of Environmental Protection.

**3. Land Owner**

This is to certify that I, as land owner, understand that this application is submitted for the purpose of obtaining a permit for the construction, operation or postclosure of a hazardous waste management facility on the property as described. For hazardous waste facilities that close with waste in place, I further understand that I am responsible for providing the notice in the deed to the property required by 40 CFR 264.119 and 265.119, as adopted by reference in Chapter 62-730, F.A.C.

SAFETY-KLEEN SYSTEMS, INC.

**Consent Resolution of the Directors**

**June 18, 2014**

The undersigned, being all of the Directors of Safety-Kleen Systems, Inc., a Wisconsin corporation (the "Company"), hereby consent to and adopt the following resolutions effective as of the above date.

**Resolved:** That each individual with the title of President, Senior Vice President, Vice President, Director, Manager or Member of the Company, or any of its subsidiaries, shall have the power and authority to sign, certify, and deliver on behalf of the Company or any subsidiary, any necessary or desirable environmental documents, including, without limitation, any permit applications or amendments and any environmental reports in any way related to the operations of the Company or its subsidiaries. In addition to the foregoing, to the extent that the Company operates any facility with more than 250 people or having gross annual sales or expenditures in excess of the \$25,000,000, the General Manager of such facility shall have all of the foregoing authority with respect to the operations of any such facility.

**Resolved:** That the President, and any Senior Vice President, Vice President or Secretary or Assistant Secretary of the Company may designate an employee of an affiliated company to sign and certify, on behalf of the Company or any subsidiary, any necessary or desirable environmental documents, including, without limitation, any permit applications, transportation related documents and environmental reports in any way related to the operations of the Company or one of its subsidiaries.

**Resolved:** That the Secretary or any Assistant Secretary of the Company is hereby authorized on behalf of the Company to certify as to who are the officers of the Company and to the due authority of any officer or other person executing any of the foregoing documents or any other documents on behalf of the Company, and any governmental official or other third party shall be entitled to fully rely on any such certification.

**WITNESS** the execution hereof under seal as of the date first above written.

  
Eric Gerstenberg, Director

**4 Professional Engineer Registered in Florida**

Complete this certification when required to do so by Chapter 471, F.S., or when not exempted by Rule 62-730.220(7), F.A.C.

This is to certify that the engineering features of this hazardous waste management facility have been designed or examined by me and found to conform to engineering principles applicable to such facilities. In my professional judgment, this facility, when properly constructed, maintained and operated, or closed, will comply with all applicable statutes of the State of Florida and rules of the Department of Environmental Protection.

**Part II**

**A. General**

**1. SITE TOPOGRAPHY AND SURROUNDING LAND USE**

Figure 2.2-1 is a USGS topographic map showing the facility per 40 CFR Part 270.14(b)(19). Due to the small size of the site, all of the information requested in FDEP's application form cannot be placed on one map. Therefore, additional maps are provided here to present the additional information requested in the application form. Specific information requested in the permit application is provided below.

***100-Year Floodplain Area***

Based on information available from the Federal Emergency Management Agency (Figure 2.2-2), the central occupied portion of the property is outside of the 100-year flood zone. However, the north, west, and south perimeters along Lockhart Smith Canal are located in the 100-year flood zone (Zone X).

***Surface Water Bodies Within One-Quarter Mile of the Facility Property Boundary (e.g., Intermittent Streams and Springs)***

Surface water bodies located within one-quarter mile of the facility property boundary include Lockhart Smith Canal, which runs along the northern, western, and southern boundaries of the site, as shown in Figure 2.2-1.

***Surrounding Land Uses***

Surrounding land uses are shown in Figure 2.2-3.

***Legal Boundaries of the Facility***

Figure 2.2-4 shows the property boundaries

***Drinking Water Wells Listed In Public Records or Otherwise Known to the Applicant Within One-Quarter Mile of the Facility Property Boundary***

Information from FDEP's GIS application, Map Direct, is found on the Map Direct Area of Interest Report.

***Intake and Discharge Structures Within One Mile***

Information on intake and discharge structures within one mile of the facility is shown on the Map Direct Area of Interest Report.

***Run-Off Control System***

The facility's paved areas are sloped such that rainwater run-off is directed to the retention swales on the north and south sides of the property. Figure 2.2-5 illustrates the contours and anticipated surface water run-off direction. Overflow will discharge into the Smith Canal. Seepage from the swales percolates into the ground water and then into the same canal.

***Access Control (fences, gates, etc.)***

Figure 2.1-1 shows access control features.

***Injection and Withdrawal Wells Both On Site and Off Site***

Results of an inventory of wells within one mile of the site are presented on the Map Direct Area of Interest Report.

***Buildings and Other Structures***

Buildings and other structures are shown in Figure 2.1-1.

***Contours Sufficient to Show Surface Water Flow***

Figure 2.2-5 shows surface water flow direction at the facility. The site is nearly flat, with surface elevations in unpaved areas. Paved areas are at slightly higher elevations. Surface water flow is directed toward the drainage catchment basins shown in Figure 2.2-5.

***Loading and Unloading Areas***

Figure 2.1-2 shows loading and unloading areas in relation to the waste management areas.

***Hazardous Waste Units***

Figure 2.2-6 shows hazardous waste management units.

***Wind Rose***

A wind rose for Orlando, Florida is shown in Figure 2.2-7.

***FACILITY LAYOUT AND TRAFFIC PATTERNS***

The facility layout is shown in Figure 2.1-1. The non-building areas of the facility are paved with asphalt or concrete as noted on the site plan. The storm water retention areas and other unpaved areas are vegetated with grass. Site photographs are provided in Appendix A.

Site traffic patterns are illustrated in Figure 2.1-2. The majority of the vehicular traffic and loading/unloading operation occurs at and near the return/fill area (Area A), which is paved with asphalt and concrete.. Approximately once per week a tractor trailer delivers containerized product and removes containerized waste for transfer to a Safety-Kleen TSDF. This truck backs up to the concrete dock, located on the northwestern side of the facility in Area B, to load waste containers and unload product for the branch.

Area A & D are used for the loading/unloading of transfer wastes, and containerized permitted wastes from local vans and trucks. The trucks dispatched from the recycle center to deliver parts washer solvent and pick up used parts washer solvent will perform these activities at the Tanker Drive-Up Area (Area C) approximately once every 20 days. Truck-to-building transfer of Fluid Recovery Service (FRS) wastes will occur on concrete surfaces within the compound (Areas A, B, and D).

U.S. 46 is the major access road to the facility. The access road is designed in accordance with engineering criteria appropriate for sustaining the traffic volume and loading for the heavy industrial activities in this area. The vans that travel the routes daily between the service center and Safety-Kleen customers use the two-lane road within the industrial park (Central Park Drive). Traffic from this facility will have a minor impact on local traffic conditions.

FIGURE 2.2-2  
FLOODPLAIN MAP  
SAFETY-KLEEN SYSTEMS, INC.  
SANFORD, FLORIDA

**LEGEND**

**SPECIAL FLOOD HAZARD AREAS (SFHAs) SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD EVENT**  
 The 1% annual chance flood (100 year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Areas on this map subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AV, AX, and V. The Base Flood Elevation is the water surface elevation of the 1% annual chance flood.

**ZONE A** No Base Flood Elevations determined.  
**ZONE AE** Base Flood Elevations determined.  
**ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponds); Base Flood Elevations determined.  
**ZONE AO** Flood depths of 1 to 3 feet (usually areas on existing terraces); average depths determined. For areas of unusual topography, maximums also determined.  
**ZONE AV** Special Flood Hazard Area boundary protected from the 1% annual chance flood event by a levee or other system that was subsequently identified. Zone AV indicates that the former flood control system is being retained to provide protection from the 1% annual chance flood.  
**ZONE V** Areas to be protected from 1% annual chance flood event by a federal flood protection system (under construction); no Base Flood Elevations determined.  
**ZONE VE** Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.

**FLOODWAY AREAS IN ZONE AE**  
 The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without significant increases in flood heights.

**OTHER FLOOD AREAS**  
**ZONE X** Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with average areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.  
**OTHER AREAS**  
**ZONE D** Areas determined to be outside the 1% annual chance floodplain.  
**ZONE I** Areas in which flood hazards are undetermined, but possible.  
**COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS**  
**OTHERWISE PROTECTED AREAS (OPAs)**  
 (CBRS areas and OPAs are normally, treated as not subject to Special Flood Hazard Areas.)

***Part II***

***A. General***

***2. FINANCIAL ASSURANCE FOR CLOSURE***

Safety-Kleen is the operator of the Sanford, Florida Branch. Financial assurance is provided through the use of the financial test specified in Subpart H of 40 CFR Part 264.143. Per 40 CFR Part 264.142 closure cost estimates are provided here.

Table 1 Closure Cost Estimate Worksheet, Safety-Kleen Sanford, FL 2018

Activity	Category	Hourly Rate or Unit Charge	Hours or Unit Estimate	Subtotal Cost
<b>1. INVENTORY REMOVAL</b>				
<u>Assumptions</u>				
- Waste mineral spirits tank(s) is full			Capacity (gallons)	
- Tank One			20000	
- Tank Two (IF APPLICABLE)			0	
	Total Tank Capacity		20000	
- Return Fill station is full				
- Maximum capacity of drum washers added to waste mineral spirits tank quantity			216	
- Container storage area(s) full				
- CSA 1			6912	
- CSA 2 (IF APPLICABLE)			0	
	Total CSA Capacity		6912	
<u>Subcontractor Costs</u>				
- Transfer tank contents to tankers				
Tank Capacity (total gallons)			20216	
Work Rate to Unload Tank Capacity (hours per gallon)			0.0003	
Total Hours to Unload			6.1	
Labor and equipment rate to unload (PPE Level D) and cost	Labor/Equipment	\$175.95	6.1	\$1,067
- Transport waste mineral spirits to a TSD for treatment/disposal				
Number of tanker trailers required (6,000 gallons max each load)			4	
Cost per mile = \$5.64/mile				
Mileage = 500 miles (Number in second column is 500 miles x number trucks)	Transport = 500 miles each	\$5.64	2000	\$11,280
Disposal/treatment cost (per gallon - low cost based on suitability for fuel)	TSD @ \$0.45/gallon	\$0.450	20216	\$9,097
- Transfer drums from CSA(s) to trucks				
Labor/Equipment (PPE Level D)	Labor/Equipment per drum	\$3.57	126	\$450
(Number in second column is number of drums determined from total CSA capacity)				
- Transport drums to TSD for Treatment/Disposal				
Total Number of Drums (Number is total of CSA drums and Flam Shed drums)			126	
Total Number of Trucks Required to Transport Drums (64 per truck max)			2	
Cost per mile = \$5.64/mile				
Mileage = 500 miles (Number in second column is 500 miles x number of trucks)	Transport trailer(s) x 500 miles	\$5.64	1000	\$5,640
Disposal/treatment cost (per drum - low cost based on suitability for fuel)	TSD @ \$90/drum	\$90	63	\$5,670
Disposal/treatment cost (per drum - not suitable for fuel)	TSD @ \$179/drum	\$179	63	\$11,277
	<b>Activity 1 Subtotal</b>			<b>\$44,481</b>
<b>2. STORAGE TANK DECONTAMINATION</b>				
<u>Assumptions</u>				
- The tanks, piping and appurtenant equipment are decontaminated and remain in place				
- Rinse sampling necessary because the tank will remain in place. Assumes 1 rinse sample per tank				
- Includes decontamination of the containment area				
- Assumes containment area to remain in place following decontamination				
- Assumes 1 rinse sample required to leave containment in place				
- Assumes 2 soil samples required from beneath containment area. Actual number of samples will be based on engineer's inspection.				
- Tank Interior Square Footage (based on tank volume)			Square Footage	
Tank 1			1206	
Tank 2 (IF APPLICABLE)			0	
	Total Tank Interior Square Footage		1206	
- Tank Farm Containment Square Footage (includes floor and walls)			2908	
<u>Prime Contractor Costs</u>				
- Costs for oversight and engineer's inspection included in Closure Certification Activity below				
- Collect Rinse Sample(s) (1 per tank and 1 per containment)				
Work Rate for Sampling (hours per sample)			0.5000	
Number of Samples			1	
Labor and equipment per work hour (PPE Level D)	Labor/Equipment	\$91.66	0.50	\$46
- Drilling for Soil Samples (2.5 in boring to 1 ft each)				
Work Rate for Drilling (hours per foot)			0.3050	
Number of Feet (subslu sample depth = 1 foot each)			2	
Labor and equipment per work hour (PPE Level D)	Labor/Equipment	\$146.29	0.61	\$89
- Collect 2 Soil Samples				
Work Rate for Sampling (hours per sample)			0.5000	
Number of Samples			2	
Labor and equipment per work hour (PPE Level D)	Labor/Equipment	\$91.66	1.00	\$92
<u>Subcontractor Costs</u>				
- Decontaminate waste AST, piping and appurtenant equipment				
Work Rate to Pressure Wash (hours per square foot)			0.0405	
Area of Tanks to be decontaminated			1206	
Labor and equipment for tank decon (PPE Level C)	Labor/Equipment	\$97.23	49	\$4,749
- Decontaminate Tank Containment Area				
Work Rate to Pressure Wash 1 sq ft (hours per square foot)			0.0405	
Total Area of Containment (includes walls and floor)			3591	
Labor and equipment for CSA decon (PPE Level D)	Labor/Equipment	\$55.77	145	\$8,565
<u>Laboratory Subcontractor Costs</u>				
- Analyze rinse sample(s) from tank(s) and containment area for VOCs, SVOCs and RCRA metals				
	VOCs @ \$189/sample			
	SVOCs @ \$359/sample			
	8 RCRA Metals @ \$110/sample			
Total per sample cost	\$658		1	\$658
- Analyze soil sample(s) from containment area for VOCs, SVOCs and RCRA metals				
	VOCs @ \$189/sample			
	SVOCs @ \$359/sample			
	8 RCRA Metals @ \$110/sample			
Total per sample cost	\$658		4	\$2,632
	<b>Activity 2 Subtotal</b>			<b>\$17,831</b>

Table 1. Closure Cost Estimate Worksheet, Safety-Kleen Sanford, FL 2018

Activity	Category	Hourly Rate or Unit Charge	Hours or Unit Estimate	Subtotal Cost
<b>3. DECONTAMINATE THE RETURN/FILL STATION</b>				
<u>Assumptions:</u>				
- Decontamination shall consist of washing with detergent/water solution and rinsing with high-pressure spray				
- Return/Fill structure and dock area will remain in place following decontamination				
- Drum washers to remain in place or sent offsite for reuse following decontamination				
- Rinsate sampling required from each drum washer to remain in place or sent offsite for reuse, and from containment				
- Assumes 2 soil samples required from beneath containment area. Actual number of samples will be based on engineer's inspection				
- Square footage used for decontamination includes containment, dock and drum washer units				
				<b>Square Footage</b>
				<b>4212</b>
<u>Prime Contractor Costs</u>				
- Costs for oversight and engineers inspection included in Closure Certification Activity below				
- Collect Rinsate Samples (1 per drum washer plus containment)				
Work Rate for Sampling (hours per sample)				
Number of Samples				
Labor and equipment per work hour (PPE Level D)				
	Labor/equipment	\$91.88	1.00	\$92
- Drilling for Soil Samples (2.5 in boring to 1 ft each)				
Work Rate for Drilling (hours per foot)				
Number of Feet (subslab sample depth = 1 foot each)				
Labor and equipment per work hour (PPE Level D)				
	Labor/equipment	\$146.26	0.61	\$89
- Collect Soil Samples				
Work Rate for Sampling (per sample)				
Number of Samples				
Labor and equipment per work hour (PPE Level D)				
	Labor/equipment	\$91.88	1.00	\$92
<u>Subcontractor Costs</u>				
- Decontaminate waste AST, piping and appurtenant equipment				
Work Rate to Pressure Wash (hours per square foot)				
Area of Return/Fill to be decontaminated				
Labor and equipment for tank decon (PPE Level C)				
	Labor/equipment	\$97.23	171	\$16,586
<u>Laboratory Subcontractor Costs</u>				
- Analyze 1 rinsate sample per drum washer and containment for VOCs, SVOCs and RCRA metals				
VOCs @ \$189/sample				
SVOCs @ \$359/sample				
8 RCRA Metals @ \$110/sample				
Total per sample cost				
		\$658	2	\$1,316
- Analyze soil sample(s) from containment area for VOCs, SVOCs and RCRA metals				
VOCs @ \$189/sample				
SVOCs @ \$359/sample				
8 RCRA Metals @ \$110/sample				
Total per sample cost				
		\$658	2	\$1,316
<b>Activity 3 Subtotal</b>				<b>\$19,491</b>
<b>4. DECONTAMINATE CONTAINER STORAGE AREA(S)</b>				
<u>Assumptions:</u>				
- Decontamination shall consist of washing with a detergent water solution and rinsing with a high-pressure spray				
- CSA(s) to remain in place following closure				
- Decontamination of CSA includes floor, curbing and containment trenches				
- Assumes 1 rinsate and 2 soil samples required per CSA. Actual number of soil samples will be based on engineer's inspection				
- CSA Containment Square Footage				
				<b>Square Footage</b>
				<b>3792</b>
				<b>3792</b>
<u>Prime Contractor Costs</u>				
- Costs for oversight and engineers inspection included in Closure Certification Activity below				
- Collect Rinsate Samples (1 per CSA)				
Work Rate for Sampling (hours per sample)				
Number of Samples				
Labor and equipment per work hour (PPE Level D)				
	Labor/equipment	\$91.88	0.50	\$46
- Drilling for Soil Samples (2.5 in boring to 1 ft each)				
Work Rate for Drilling (hours per foot)				
Number of Feet (subslab sample depth = 1 foot each x number of samples)				
Labor and equipment per work hour (PPE Level D)				
	Labor/equipment	\$146.26	0.61	\$89
- Collect Soil Samples				
Work Rate for Sampling (hours per sample)				
Number of Samples				
Labor and equipment per work hour (PPE Level D)				
	Labor/equipment	\$91.88	1.00	\$92
<u>Subcontractor Costs</u>				
- Decontaminate CSA(s)				
Work Rate to Pressure Wash (hours per square foot)				
Total Area of Permitted CSA(s) to be decontaminated				
Labor and equipment for CSA decon (PPE Level D)				
	Labor/equipment	\$65.77	154	\$10,101
<u>Laboratory Subcontractor Costs</u>				
- Analyze rinsate sample(s) from each CSA for VOCs, SVOCs and RCRA metals				
VOCs @ \$189/sample				
SVOCs @ \$359/sample				
8 RCRA Metals @ \$110/sample				
Total per sample cost				
		\$658	1	\$658
- Analyze 2 soil sample(s) from each CSA for VOCs, SVOCs and RCRA metals				
VOCs @ \$189/sample				
SVOCs @ \$359/sample				
8 RCRA Metals @ \$110/sample				
Total per sample cost				
		\$658	2	\$1,316
<b>Activity 4 Subtotal</b>				<b>\$12,302</b>

Table 1. Closure Cost Estimate Worksheet, Safety-Kleen Sanford, FL 2018

Activity	Category	Hourly Rate or Unit Charge	Hours or Unit Estimate	Subtotal Cost
<b>5. CONTAINERIZE, STAGE, TRANSPORT AND DISPOSE OF DECONTAMINATION WASTES</b>				
<u>Assumptions:</u>				
- Amount of decon wash water generated derived from previous closure experience. Quantity based on approximately 0.8 gal/sq ft for tank systems and 0.1 gal/sq ft for containment area floors				
Unit Description	Square Footage	Number Gallons	Number Drums	
STORAGE TANK DECONTAMINATION	1,206	955	18	
DECONTAMINATE TANK CONTAINMENT	2,998	291	6	
DECONTAMINATE THE RETURN/FILL STATION	4,212	3370	62	
DECONTAMINATE CONTAINER STORAGE AREA(S)	3,792	379	7	
PPE, CONSUMABLES, DEBRIS	NA	NA	5	
- Purchase 55-gallon drums to containerize wash water	Drums @ \$83 each	\$83	98	\$8,947
<u>Subcontractor Costs</u>				
- Transfer drums to trucks	Labor/Equipment (PPE Level D)	\$3.57	98	\$350
- Transport drums to TSD for Treatment/Disposal				
Total Number of Trucks Required to Transport Drums (84 per truck max)			2	
Cost per mile = \$5.64/mile				
Mileage = 500 miles (Number in second column is 500 miles x number trucks)	Transport trailer(s) x 500 miles	\$5.64	1000	\$5,640
Disposal/treatment cost (per drum - low cost based on lack of hazardous constituents)	TSD @ \$90/drum	\$90	93	\$8,370
Disposal/treatment cost for PPE drums (assumed haz to landfill)	TSD @ \$250/drum	\$250	5	\$1,250
<b>Activity 5. Subtotal</b>				<b>\$24,557</b>
<b>6. CLOSURE CERTIFICATION</b>				
<u>Assumptions:</u>				
- Cost Pro unit rate per unit to be closed is \$4,118				
- Unit rate includes engineer inspection and decontamination oversight of each unit				
<u>Prime Contractor Costs</u>				
- Oversee and certify closure per unit times number of units	Project Manager/Engineer	\$4,118	3	\$12,354
<b>Activity 6. Subtotal</b>				<b>\$12,354</b>
<b>COST ESTIMATE ACTIVITIES SUMMARY</b>				
1. INVENTORY REMOVAL				\$44,481
2. STORAGE TANK DECONTAMINATION				\$17,831
3. DECONTAMINATE THE RETURN/FILL STATION				\$19,481
4. DECONTAMINATE CONTAINER STORAGE AREA(S)				\$12,392
5. CONTAINERIZE, STAGE, TRANSPORT AND DISPOSE OF DECONTAMINATION WASTES				\$24,557
6. CLOSURE CERTIFICATION				\$12,354
<b>TOTAL CLOSURE COST ESTIMATE</b>				<b>\$131,017</b>
CONTINGENCY				15%
<b>TOTAL CLOSURE COST WITH CONTINGENCY</b>				<b>\$150,668</b>

Notes:

- Estimate assumes that waste management units are at permitted capacity at time of closure, which is the most expensive in the facility's operating life.
- All unit rates obtained from Coal Pro version 6.0, which is designed to be representative of 2nd party costs and includes the following:
  - Transportation @ \$5.64/mile and 300 mile trip
  - Disposal for bulk liquids \$0.45/gallon based on suitability of waste mineral splits as fuel
  - Disposal for CSA liquids \$90/drum based on suitability of drummed waste streams as fuel
  - Disposal of decon wash water \$90/drum based on lack of hazardous constituents in waste (soapy water)
  - Subcontractor Decontamination Rate for tanks and return/fill based on PPE Level C
  - Subcontractor decontamination rates for tank containment, CSAs and Flamm. Shed (if applicable) based on PPE Level D
  - Prime Contractor Rates based on hourly rate for rinsate sampling, drilling and soil sample collection
  - Lab subcontractor rates for analysis of rinsate and soil samples (Assumes VOCs, SVOCs and metals)
  - Closure Certification Activity includes contractor oversight, PE integrity inspections and reporting/Certification

Instructions: Enter unit capacity and dimensions for each permitted unit. See notes below for color code key.  
 Only cells highlighted in red should be changed to match site conditions.

Numbers in red are site specific and should be changed to match actual permitted units. Enter appropriate dimensions or capacities based on actual dime  
**Numbers in bold red are linked and will autopopulate on the closure cost estimate worksheet**  
**Closure cost estimate worksheet includes 2 tanks and 2 CSAs. Enter 0 for second unit capacity if a second unit is not present**  
**Numbers in blue below represent cells with formulas and are calculated values - DO NOT CHANGE CELLS WITH BLUE NUMBERS**  
**Numbers in bold blue below are linked and will autopopulate on the closure cost estimate worksheet**  
 Numbers in black below are generally not included in SK permits or closure plans and are estimated based on typical dimensions  
**Numbers in bold black are typical dimensions that are linked and will autopopulate on the closure cost estimate worksheet**

*Part II*

*A. General*

*4. FACILITY SECURITY*

***SECURITY PROCEDURES AND EQUIPMENT***

In accordance with 40 CFR 264.14, access to the facility is controlled through the following methods:

1. Entry to the container and return/fill areas will be controlled through gates and doors. All gates and doors will be locked at all times when facility is not in operation. The entire facility is surrounded by a chain-link fence topped with barbed wire.
2. The combination of doors and signs prevents unknowing entry and minimizes the potential for unauthorized entry of people or livestock into the facility.
3. Signs are posted at the entrance of the facility and additional locations so that they are visible from any approach at 25 feet. Signs are marked “DANGER – UNAUTHORIZED PERSONNEL KEEP OUT”.
4. “NO SMOKING” signs are posted in areas where hazardous wastes are handled.

Primary Emergency Coordinator: Alex Hilley Mobile Number (24/7): (407) 790-9814  
Secondary Emergency Coordinator: Gary Howard Mobile Number (24/7): (321) 363-6524  
Safety-Kleen Emergency Response Number: (24/7): (800) 468-1760

**Note:** Safety-Kleen operates Monday-Friday 7:00 am – 6:00 pm. The Safety-Kleen Emergency Response Number is available 24/7 for response to emergency situations at all Safety-Kleen facilities.

**Hazardous Waste Information:**

Name of Waste	Waste codes/hazards	Location Accumulated	Maximum Amounts Present	Response Notes	Special Notes to Hospital/Treatment Personnel
Branch Contaminated Debris	D001 (ignitability, flash point <140 °F), D004 (toxicity), D005 (toxicity); F002, F003, F005 (tetrachloroethylene, trichloroethylene, acetone, methyl ethyl ketone, toxicity)	NW corner of warehouse, container storage area	Four, 55-gallon drums (1,600 lbs.)	If personnel come into direct contact with material, decontamination at the hospital may be required prior to treatment.	None
Branch Contaminated Debris	D001 (ignitability, flash point <140 °F), D004 (toxicity), D005 (toxicity); F002, F003, F005 (tetrachloroethylene, trichloroethylene, acetone, methyl ethyl ketone, toxicity)	Two Satellite accumulation areas as noted with (BCD) facility figure	One, 55-gallon drum at each location (400 lbs.)	If personnel come into direct contact with material, decontamination at the hospital may be required prior to treatment.	None

**Hazardous Waste Information (continued):**

Name of Waste	Waste codes/hazards	Location Accumulated	Maximum Amounts Present	Response Notes	Special Notes to Hospital/Treatment personnel
Spent aerosol cans	D001 (ignitability, flash point <140 °F), D035 (toxicity)	NW corner of warehouse, container storage area	One, 30-gallon drum (100 lbs.)	In the event of excessive temperatures (fire) cans may depressurize and possibly explode in severe cases.	None
Spent aerosol cans	D001 (ignitability, flash point <140 °F), D035 (toxicity)	Warehouse – midpoint of container storage area noted by (AC) on figure	One, 30-gallon drum (100 lbs.)	In the event of excessive temperatures (fire) cans may depressurize and possibly explode in severe cases.	None
Paint Gun Cleaner	D001 (ignitability, flash point <140 °F), D018, D035; F003, F005	NW corner of warehouse, container storage area	Fifteen, 5-gallon drums (600 lbs.)	In case of fire use carbon dioxide, regular foam, regular dry chemical, water spray and water fog for extinction. Use PPE to prevent contact with skin/eyes/respiratory system. Prevent sources of ignition and open flames.	If inhaled remove person to fresh air, if in eyes rinse cautiously with water for several minutes, if on skin remove immediately all clothing and rinse skin with water, if swallowed immediately call poison center, do not induce vomiting.

**Hazardous Waste Information (continued):**

Name of Waste	Waste codes/hazards	Location Accumulated	Maximum Amounts Present	Response Notes	Special Notes to Hospital/Treatment personnel
Paint Related Wastes	D001 (ignitability, flash point <140 °F), D018 (toxicity), D035 (toxicity); F003, F005 (Benzene, Methyl Ethyl Ketone, Toluene, toxicity)	NW corner of warehouse, container storage area	Eight, 55-gallon drums (3,600 lbs.)	If personnel come into direct contact with material, decontamination at the hospital may be required prior to treatment.	None
Dry Cleaning Waste (Perc) Bottoms	D007, D039, D040 (toxicity); F002 (toxicity)	NW corner of warehouse, container storage area	Four, 15-gallon drums (640 lbs.)	If personnel come into direct contact with material, decontamination at the hospital may be required prior to treatment. Use PPE to avoid absorption into the respiratory tract.	Evaluate and support the airways, breathing and circulation. Establish intravenous access in seriously ill patients. Continuously monitor cardiac rhythm.
Dry Cleaning Waste (Perc) Filters	D007, D039, D040 (toxicity); F002 (toxicity)	NW corner of warehouse, container storage area	Two, 30-gallon drums (178 lbs.)	If personnel come into direct contact with material, decontamination at the hospital may be required prior to treatment. Use PPE to avoid absorption into the respiratory tract.	Evaluate and support the airways, breathing and circulation. Establish intravenous access in seriously ill patients. Continuously monitor cardiac rhythm.

**Hazardous Waste Information (continued):**

Name of Waste	Waste codes/hazards	Location Accumulated	Maximum Amounts Present	Response Notes	Special Notes to Hospital/Treatment personnel
Dry Cleaning Waste (Naptha) Bottoms	D001 (ignitability, flash point <140 °F), D007, D039, D040 (toxicity)	NW corner of warehouse, container storage area	One, 16-gallon drum (162 lbs.)	If personnel come into direct contact with material, decontamination at the hospital may be required prior to treatment.	None
Dry Cleaning Waste (Naptha) Filters	D001 (ignitability, flash point <140 °F), D007, D039, D040 (toxicity)	NW corner of warehouse, container storage area	One, 16-gallon drum (120 lbs.)	If personnel come into direct contact with material, decontamination at the hospital may be required prior to treatment.	None
Immersion Cleaner	D027, D039, D040 (toxicity)	NW corner of warehouse, container storage area	Four, 16-gallon drums (280 lbs.)	Fire response: use carbon dioxide/dry chemical/alcohol resistant foam/water spray or water fog.	None
Hydrochloric Acid	D002 (corrosive)	Transfer waste storage areas (southern portion of container storage area or NW Return/Fill station bay	Two, 55-gallon drums (800 lbs.)	Suitable extinguishing agents: water, dry chemical, chemical foam, carbon dioxide or alcohol-resistant foam. Combustion products may include carbon oxides or other toxic vapors. Use PPE to protect eyes, skin, and respiratory tract.	Move exposed persons to fresh air, wash affected areas with soap/water, rinse affected areas with water for at least 15 minutes. Seek medical attention immediately.

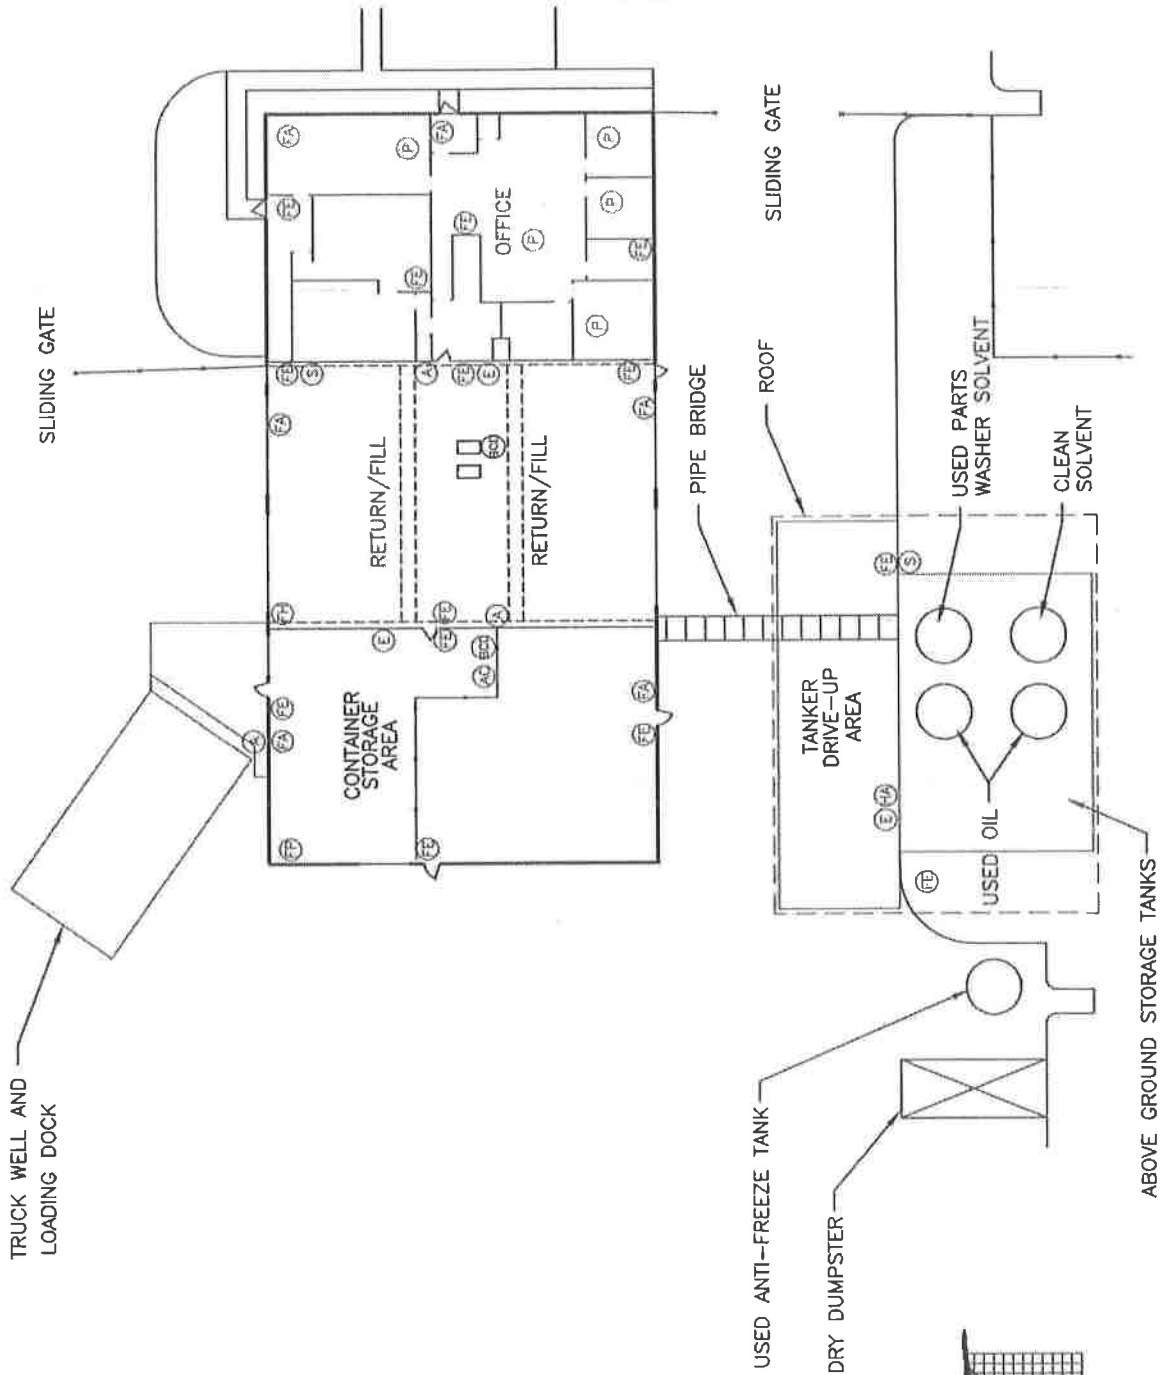

**Hazardous Waste Information (continued):**

Name of Waste	Waste codes/hazards	Location Accumulated	Maximum Amounts Present	Response Notes	Special Notes to Hospital/Treatment personnel
Sulfuric Acid	D002 (corrosive)	Transfer waste storage areas (southern portion of container storage area or NW Return/Fill station bay	Two, 55-gallon drums (800 lbs.)	Suitable extinguishing agents: water, dry chemical, chemical foam, carbon dioxide or alcohol-resistant foam. Thermal decomposition can lead to release of irritating gases & vapors. Use PPE to protect eyes, skin, and respiratory tract.	Move exposed persons to fresh air, wash affected areas with soap/water, rinse affected areas with water for at least 15 minutes. Seek medical attention immediately.
Waste Gasoline	D001 (ignitability, flash point <140 °F), D008, D018 (toxicity)	Transfer waste storage areas (southern portion of container storage area or NW Return/Fill station bay	Two, 55-gallon drums (800 lbs.)	Use dry chemical, CO2, water spray or fire-fighting foam to extinguish. In the event of fire responders should use approved pressure-demand self-contained breathing apparatus with full-face piece and full protective clothing.	Do not induce vomiting if swallowed, rinse mouth, remove any contaminated clothing, rinse affected eye/skin areas with water. Seek immediate medical attention.
Hazardous Waste Liquid (Lead)	D008 (toxicity)	Transfer waste storage areas (southern portion of container storage area or NW Return/Fill station bay	Two, 55-gallon drums (800 lbs.)	If personnel come into direct contact with material, decontamination at the hospital may be required prior to treatment.	None

**Hazardous Waste Information (continued):**

Name of Waste	Waste codes/hazards	Location Accumulated	Maximum Amounts Present	Response Notes	Special Notes to Hospital/Treatment personnel
Waste Petroleum Distillates	D001 (ignitability, flash point <140 °F)	Transfer waste storage areas (southern portion of container storage area or NW Return/Fill station bay	Two, 55-gallon drums (800 lbs.)	Prevent sources of ignition and open flames.	None
Hazardous Waste Solid (Chromium, Silver)	D007, D011 (toxicity)	Transfer waste storage areas (southern portion of container storage area or NW Return/Fill station bay	Two, 55-gallon drums (1,000 lbs.)	If personnel come into direct contact with material, decontamination at the hospital may be required prior to treatment.	None
Paint Related Waste	D001 (ignitability, flash point <140 °F), D018 (toxicity), D035 (toxicity); F003, F005 (Benzene, Methyl Ethyl Ketone, Toluene, toxicity)	Transfer waste storage areas (southern portion of container storage area or NW Return/Fill station bay	Sixteen, 55-gallon drums (7,200 lbs.)	If personnel come into direct contact with material, decontamination at the hospital may be required prior to treatment.	None
Used Parts Washer Solvent	D001 (ignitability, flash point <140 °F), D018, D039, D040 (toxicity)	NE corner of the Above Ground Storage Tank Farm (Used Parts Washer Solvent Tank 20-gallon capacity)	Nineteen thousand gallons. (Note: Normal operating capacity is approximately 7,000 gallons)	If personnel come into direct contact with material, decontamination at the hospital may be required prior to treatment.	None

**PREPAREDNESS, PREVENTION, CONTINGENCY PLAN, AND EMERGENCY  
PROCEDURES FOR DAILY BUSINESS OPERATIONS**

**GENERAL INFORMATION**

***Purpose***

The preparedness, prevention, and contingency plan and emergency procedures are designed to comply with 40 CFR Part 264.30-56. In addition, the procedures in the plan ensure that Safety-Kleen reduces the possibility of emergency situations and, should they occur, respond in a manner to prevent or minimize hazards to human health or the environment from fire, explosion, or any unplanned sudden or non-sudden release of hazardous material constituents to the air, soil, surface water, or ground water at the facility.

The provisions of the plan are to be carried out immediately if there is a fire, explosion, or release of hazardous materials that could threaten human health or the environment. All responses must conform to the procedures contained in this plan.

***General Description of Activities***

The business activities conducted at the Sanford Branch relate to the leasing and servicing of Safety-Kleen Parts Cleaning Equipment, including the provisions of a solvent leasing service for the customers. Clean solvents are distributed from, and the used solvents returned to, the Branch, where separate storage tanks are utilized for the storage of clean and used parts washer solvent. One 20,000-gallon fresh parts washer solvent storage tank currently is utilized at the facility. In addition, a 20,000-gallon tank is used to contain hazardous waste solvent, two 20,000-gallon tanks are used for storage of Used Oil, and a 12,000-gallon tank (double-walled) is used for storage of used antifreeze. Warehouse space is designated for the storage of containers of both clean and used immersion cleaner, parts washer solvent, paint waste, Fluid Recovery Services (FRS) wastes, and dry cleaning wastes. Over-pack containers are used for the management of containers whose integrity has been compromised.

*Revision 0 – 11/10/18*

Parts washer solvents are transported in covered containers between the Branch and customers. Upon returning to the Branch, the used parts washer solvent is transferred from the containers into a wet dumpster (solvent return receptacle) in which coarse solids in the parts washer solvents are retained. Used parts washer solvent from the wet dumpster flows via 2-inch piping into a 20,000-gallon aboveground tank for storage. This piping runs west under the return/fill dock, and then turns south to the tank farm. The piping is connected by threaded connectors from the return/fill (inside secondary containment), and once leaving the return/fill it is connected by welded connectors until it reaches the tank farm. Hazardous waste parts washer solvent is picked up regularly by a bulk tank truck from a Safety-Kleen TSDf, which at the same time delivers clean parts washer solvent. The sludge in the wet dumpster is regularly cleaned out, containerized, and stored as Branch generated waste in a permitted waste storage area for later shipment to a permitted Safety-Kleen/Clean Harbors TSDf for reclamation or disposal.

The immersion cleaner remains in a covered container at all times during transportation and storage. The solvent is not transferred to another container while being used by the customers or while in storage at the Branch.

Dry cleaning wastes are picked up at commercial dry cleaning establishments in containers. Dry cleaning wastes handled by Safety-Kleen consist of spent filter cartridges, powder residue from diatomaceous or other powder filter systems, and still bottoms, all of which fall into the categories of either perchloroethylene-based waste or naphtha-based waste. The dry cleaning wastes are packaged on the customer's premises in containers.

All antifreeze collected and managed by Safety-Kleen within Florida is recycled. At the customer's location, Safety-Kleen pumps used ethylene glycol (antifreeze) into a Safety-Kleen used oil tanker truck. The SK collection trucks have more than one compartment so the antifreeze is picked up and stored in a separate compartment until off-load at the branch. The used antifreeze is transported from the customer site to the branch for storage until shipment to be reprocessed into a pure product. This procedure is in accordance with FDEP's Best Management Practices for Managing Used Antifreeze at Vehicle Repair Facilities, dated May 22, 2012. In addition, Safety-Kleen sells its' own private label antifreeze in 55-gallon containers. Customers

*Revision 0 – 11/10/18*

will then place used antifreeze in these containers to be shipped back to the branch. This material is shipped to SK distribution centers, and then shipped to 3<sup>rd</sup> party recyclers.

Safety-Kleen offers a service for the collection of bulk used oil, commonly referred to as Safety-Kleen Oil Services (SKOS). Straight tanker trucks are used to collect and transport bulk used oil. After collection, the used oil is transported to the branch for storage in two (2) above ground storage tanks within the tank farm. The Branch is registered as a used oil transfer facility, and may store used oil for more than 24 hours and less than 35 days. The used oil is then transported to the Safety-Kleen Ocala, FL facility.

Safety-Kleen also provides a paint waste reclamation service. Wastes containing various thinners and paints are collected in containers and are stored at the permitted container storage area. Paint wastes are received at the Branch on manifests which are terminated at that point. These wastes are then re-manifested and shipped to a permitted Safety-Kleen/Clean Harbors TSDF, and the regenerated solvent may be distributed to Safety-Kleen customers for use as a product.

The FRS wastes are packaged in polyethylene or steel containers which are not opened until they reach a permitted Safety-Kleen/Clean Harbors TSDF. The FRS wastes are transfer wastes and may be stored onsite for up to 10 days. The FRS wastes may also undergo branch-to-branch or truck-to-truck transfer. This transfer will occur at the return/fill station inside secondary containment.

The waste products exhibit essentially the same biological, physical, and chemical properties as the fresh product. Used products are basically fresh products with impurities of dirt and metals. Safety Data Sheets (SDSs) for each hazardous material are available at the Branch and on demand by fax through a company-owned SDS information service. This service provides 24-hour phone or fax access to an extensive SDS database.

The Branch is registered in Florida as a transporter and storage facility for mercury-containing lamps and devices destined for recycling. This registration includes a commitment to comply with the requirements of Florida Administrative Code (FAC) 62-737.400, including all training

*Revision 0 – 11/10/18*

requirements. As a registered small quantity handler of universal waste lamps/mercury devices, the Branch can only store up to 2,000 kilograms of lamps or 100 kg of mercury-containing devices at any one time. Safety-Kleen provides customers with empty four-foot and eight-foot boxes which hold up to 39 lamps. Boxes containing lamps are picked up from customers and are handled at the Branch as non-hazardous transfer wastes. The boxes are stored at the Branch in a designated area within the transfer waste storage area, and labeled in accordance with 62-737.400(5)(b), FAC. This storage area is partially isolated from other transfer wastes to avoid potential for accidental breakage. The boxes are periodically shipped to a permitted mercury recovery or reclamation facility. Prior to shipment out of the Branch, the boxes are placed on pallets and shrink-wrapped with plastic. Figures 5.1-1 and 5.1-2 show the basic site and floor plans and the locations of waste management facilities and facility storage. Table 5.1-1 provides information regarding permitted and transfer wastes handled at the facility.

Safety-Kleen handles all types of batteries with the exception of lithium batteries. All applicable batteries, per 40 CFR Part 273.2 & 273.9, are managed in accordance with the Standards For Universal Waste Management found in 40 CFR Part 273. Batteries not meeting these standards may be managed as 10-day transfer hazardous waste.

**Note: All waste containers are unloaded within 72 hrs. of arrival at the facility and all waste containers are shipped outbound within 72 hrs. of being loaded for shipment.**

## ***INSPECTION PROCEDURES***

### ***Inspection of Safety Equipment***

The purpose of the inspection plan is to establish a procedure and schedule for the systematic monitoring and inspection of emergency and spill control equipment to ensure proper operation, and to maintain compliance. Table 5.2-1 is an Inspection Schedule. Inspections of Safety/Security equipment are completed electronically (CO Safety Security Inspection), or on paper using Figure 5.2-1 if the electronic system is not available. The Branch Manager or designee is responsible for carrying out the inspection in accordance with the following procedure and schedule.

- A weekly inspection of fire extinguishers must be performed to ensure that the tag date has not expired and the units are properly charged and accessible.
- A weekly inspection of eyewash stands must be performed to assure accessibility, and proper operation of this equipment. Inventory of the first-aid kit must be checked on a weekly basis.
- A weekly check of the supply of spill control equipment (absorbent material) must be performed.
- A weekly check of the conditions and inventory of other emergency equipment will be made. This includes gloves, aprons, goggles, respirators, and other personal protective equipment.

### ***Inspection of Security Equipment***

Security equipment inspections are completed electronically (CO Safety Security Inspection), or on paper using Figure 5.2-1 if the system is not available. The Branch Manager or designee, using the Weekly Inspection Log (Figure 5.2-1 or similar), inspects the security features of the facility weekly (e.g., gates and locks), looking for any evidence of sticking, corrosion, or unusual activity. The facility fence will be checked weekly for deterioration, gaps, and broken wire ties.

### ***Inspection of Waste Management Facilities***

The purpose of the inspection plan is to establish a procedure and schedule for the systematic monitoring and inspection of hazardous waste management and other material management facilities to ensure proper operation and maintain compliance. Table 5.2-1 provides an Inspection Schedule. The Branch Manager or designee is responsible for carrying out the inspections of all hazardous waste management facilities in accordance with the following procedure and schedule.

Daily inspections of aboveground tanks will include the following:

- Note volume in tank.
- Observe tank exterior for loose anchoring, wet stops, leaks.

*Revision 0 – 11/10/18*

- Check the automatic high level alarm. In addition, measure the depth of used solvent in the tanks to confirm the proper functioning of the automatic alarm system and to determine unexpected deviations in tank measuring data, or a sudden drop in liquid level, which may indicate leakage.
- Inspect secondary containment walls and piping.
- Inspect transfer pumps for leaking seals and overheated motors.
- Inspect the solvent dispensing hose, fittings, and valve for any leaks, damage, or wear that could cause a leak to develop.
- Inspect the valves for proper seat. Stem leaks from worn glands and warped valve bodies should be repaired. If the valve cannot be repaired, replace the unit.

Also, the tanks will be visually inspected and tested periodically. Daily inspection of the solvent return receptacle (wet dumpster) will consist of an inspection for leaks and excess dumpster mud build-up.

Daily inspections of the container storage area include the following:

- Verify that total volume is within permitted limits.
- Physically examine the condition of containers to verify that leaks have not occurred since the last inspection.
- Verify that all container identification, dates, and hazardous waste labels are attached and current.
- Inspect container placement and stacking such as aisle space, height, and stability of stacks.
- Examine containment areas to detect signs of deterioration and failure of the containment system such as cracks, breakage, settlement, and spillage.

*Corrective Action*

Any discrepancies or deficiencies found during routine inspections will be recorded in the inspection log and brought to the attention of a supervisor. At this time an evaluation of the

seriousness of the problem will be noted and a decision made if the situation requires immediate action or the problem can be handled as routine maintenance. The evaluation of the seriousness of the problem will be recorded in the facility's inspection log. If the problem poses a threat to human health or the environment, action will be taken immediately. The Branch Manager has the overall responsibility for resolving any discrepancies found during the routine inspection.

### ***EMERGENCY NOTIFICATION***

#### ***Emergency Coordinator***

The Branch Manager or designee is the emergency coordinator. Page iii at the beginning of the plan includes the names, home addresses, and both office and home phone numbers of the primary emergency coordinator and alternate. At least one employee will be either present on the facility premises or on call with responsibility for coordinating all emergency response measures at all times. This primary emergency coordinator and alternate emergency coordinator are thoroughly familiar with all aspects of the facility's contingency plan, all operations and activities at the facility, the location and characteristics of materials handled, the location of all records within the facility, and the facility layout. In addition, these coordinators have the authority to commit the resources needed to carry out the contingency plan.

### ***EMERGENCY RESPONSE AGENCIES AND TEAM MEMBERS***

The agencies and response team members to be notified whenever an imminent or actual emergency occurs are presented on page iii, located at the beginning of this plan.

### ***ACTIONS OF THE EMERGENCY COORDINATOR***

Whenever there is an imminent or actual emergency situation, the emergency coordinator (or the designee when the emergency coordinator is on call) must immediately:

- a. Notify all facility personnel present of the emergency. The relatively small size of this facility makes direct verbal communication the most expedient form of emergency

notification. The emergency coordinator may also elect to proceed to the front of the building and repeatedly sound a car horn to notify building occupants of an emergency. A head count will be performed by the emergency coordinator.

- b. Notify appropriate state or local agencies with designated response roles if their help is needed.
- c. Summon the primary emergency coordinator, if that person is absent.

Whenever a release, fire, or explosion occurs, the emergency coordinator must immediately identify the character, exact source, amount, and areal extent of any released materials. Because of the limited types of chemicals in storage, the identification processes can easily be performed visually.

***Procedure for Assessing Possible Hazard to the Environment and Human Health***

- After identification of the character, source, amount, and extent of a release, fire, or explosion, the emergency coordinator must decide whether the situation can be contained or cleaned up by plant personnel and equipment.
- If a fire or explosion is determined uncontrollable by plant personnel or threatening neighboring establishments or population, assistance from a local emergency response agency shall be summoned immediately and an evacuation order requested.
- In case of a release outside of the containment area that is deemed immediately uncontrollable or unrecoverable, the local emergency response agency and/or specialty cleanup contractor shall be called in.
- After termination of a fire or explosion or containment and preliminary cleanup of a spill, evaluate whether residues in the form of gas or liquid have become airborne, seeped into ground water, and/or flowed into surface water bodies.
- Expert assistance should be requested to determine whether the escaped materials are potentially harmful and whether the receiving medium ultimately will be a populated area, public water supply source, a private well, or an environmentally sensitive area.
- Additional steps shall then be taken to mitigate the potential impact on the environment and human health, in accordance with expert recommendations.

If the emergency coordinator determines that the facility has had a release, fire, or explosion or other emergency that could threaten human health, or the environment outside the facility, the coordinator must report those findings, as follows:

- If the assessment indicates that evacuation of local areas may be advisable, the coordinator must immediately notify appropriate authorities. The coordinator must be available to help appropriate officials decide whether local areas should be evacuated.
- The coordinator must immediately notify the State Warning Point at (800) 320-0519 (24 hours).
- The coordinator must immediately notify the Central District of the FDEP, (407) 897-4100 during regular business hours, and if a release equals or exceeds the Reportable Quantity (RQ) the National Response Center (800) 424-8802 must immediately (within 15 minutes) be contacted.

The report must include:

- (1) Name and telephone number of notifier;
- (2) Name and address of facility;
- (3) Time and type of incident (e.g., release, fire);
- (4) Name and quantity of material(s) involved, to the extent known;
- (5) The extent of injuries, if any; and
- (6) The possible hazards to human health, or the environment outside the facility.

The facility will comply with the reports required by permit conditions Part 1.8, and Part V.2 (SWMU information).

Immediate assistance in assessing and responding to an emergency is obtained by the emergency coordinator by calling the 24-hour Safety-Kleen emergency number ((800) 468-1760). The 24 hour emergency number is used by Safety-Kleen to respond to all reports of spills or chemical emergencies. All Safety-Kleen facilities in the state use this 24-hour emergency number. This allows Safety-Kleen to respond to any emergency with a maximum of effort, thereby reducing the threat to human health or the environment.

During an emergency, the emergency coordinator must take all reasonable measures necessary to

*Revision 0 – 11/10/18*

ensure that fires, explosions, and releases do not occur, recur, or spread to other hazardous waste at the facility. These measures must include, where applicable, stopping processes and operations, collecting and containing released waste, and removing or isolating containers.

If the facility stops operations in response to a fire, explosion, or release, the emergency coordinator must monitor for leaks, pressure build-up, gas generation, or ruptures in valves, pipes, or other equipment, wherever this is appropriate.

Immediately after an emergency, the emergency coordinator must provide for treating, storing, or disposing of recovered waste, contaminated soil or surface water, or any other material that results from a release, fire, or explosion at the facility.

The emergency coordinator must ensure that, in the affected area(s) of the facility:

- No waste that may be incompatible with the released material is treated or stored until cleanup procedures are completed; and
- All emergency equipment listed in the contingency plan is cleaned and fit for its intended use before operations are resumed.

The owner or operator must notify the appropriate state and local authorities that the facility is in compliance with the requirements of the preceding paragraph, before operations are resumed in the affected area(s) of the facility.

The owner or operator must note in the operating record the time, date, and details of any incident that requires implementing the contingency plan. Within 15 days after the incident, the owner must submit a written report on the incident to the Central District of the FDEP, at 3319 Maguire Blvd., Suite 232, Orlando, Florida 32803. The report must include:

1. Name, address, and telephone number of the owner or operator;
2. Name, address, and telephone number of the facility;
3. Date, time, and type of incident (e.g., fire, explosion);
4. Name and quantity of material(s) involved;

5. The extent of injuries, if any;
6. An assessment of actual or potential hazards to human health or the environment, where this is applicable; and
7. Estimated quantity and disposition of recovered material that resulted from the incident.

***POTENTIAL SPILL SOURCES***

The following is a list of activities that have the potential for a small scale (less than 55 gallons of waste) pollution incident.

1. Moving of containers.  
Every time a container is moved, the possibility exists that it could tip over or be dropped. To minimize the possibility of spillage of solvent under those conditions, all container lids must be secured before the container is moved.
2. Delivery truck container transfers.
  - a. Individual delivery containers hold from 5 to 55 gallons of waste, a quantity which can be contained by oil sorbent clay or pads, if accidentally spilled.
  - b. Each vehicle is equipped with a hoist and hand cart for ease of moving clean solvent containers off the truck and into the customer's shop and returning the dirty solvent containers to the truck.
  - c. Lids are secured on containers prior to movement to prevent a spill.
  - d. Each truck contains a complete spill kit, shovel, and a quantity of sorbent material to contain minor spills.
  - e. The cargo must be secured in the route vehicle before transit.

***Spills Inside Buildings***

In the event of a spill indoors, the doors and windows should be opened to improve the ventilation in the confined area. Following the instructions of the Safety Data Sheet (SDS), a worker would enter the area wearing rubber gloves, boots, and mop up the liquid and return it to dirty storage. Spills inside the building will be contained by the existing secondary containment structures, or by using available absorbent material and booms. Proper characterization, treatment, and disposal of the decontamination water will be done on a case by case basis depending on the material released. All material will be disposed of per federal, state, and local regulations. The cleanup is completed only when the workers have cleaned themselves and the emergency equipment with soap and water.

***Spills on Concrete Pads***

Concrete pads in loading and unloading areas are, in most cases, equipped with secondary containment. Under most spill conditions, product can be totally contained on the concrete surface and in the containment system. Upon containment, arrangements must be immediately undertaken to recover the material. Any soil that may be involved must be removed and handled in the same manner as the material spilled.

***Tank Spills or Leakage***

Aboveground tanks are underlain by a concrete slab and surrounded by a concrete dike to contain any spilled or leaked solvent. The containment system has been sized in accordance with the regulations, and the material will be totally contained under most spill conditions. Should a spill occur, arrangements must be immediately undertaken to recover the material. In the event of leakage, tank repair or replacement will be initiated. Any soil that may be involved must be removed and handled in the same manner as the material spilled. 40 CFR Part 264.196(d)(2) exempts spills equal to or less than one pound that are immediately contained and cleaned up.

***Spill Control Procedures***

If a solid or hazardous waste, or hazardous material discharge occurs:

1. Stop the discharge, if possible, by immediately transferring the liquid to a good container. If the discharge involves a tank, immediately close all valves to and from the tank.
2. Retain, contain, or slow the flow of the material, if possible, by diking with sorbent pad or dirt. Based on the seriousness of the incident, the emergency coordinator will select the level of personal protective equipment required to address the incident. Pump and mop up the liquid from the floor into a good container and return the container to storage for subsequent shipment to a Safety-Kleen recycle center for reclamation/disposal. The area and equipment that comes in contact with the spill must be decontaminated with soap and water. All residues resulting from containment and decontamination will be collected for proper characterization.
3. If the material escapes the containment efforts, immediately call the 24-hour Safety-Kleen emergency number with response time less than two hours (page iii). Record the

*Revision 0 – 11/10/18*

date, time, and name of person taking the message. The State Warning Point ((800) 320-0519) is to be contacted as soon as possible, but no later than within one working day of discovery of the release. If a release equals or exceeds the Reportable Quantity (RQ) the National Response Center ((800) 424-8802) is to be contacted within 15 minutes.

4. Immediately recover spilled solvent to reduce property and environmental damage using the emergency and safety equipment stored onsite for such situations (Figure 5.6-1 and Table 5.6-1), or call in emergency response contractors (page iii). Start recovery operations immediately. After recovery of spilled solvent, wash all contaminated impervious surfaces and equipment with soap and water. The residue of spill- or fire-contaminated soils and waste waters must be removed and disposed of at a Safety-Kleen recycle center. In addition, the recovered solvent will be sent to a Safety-Kleen recycle center for reclamation.
5. The person reporting a spill should be prepared to give their name, position, company name, address, and telephone number. The person reporting also should give the nature of the material spilled (e.g., immersion cleaner, etc.) and, if possible, some estimate of the amount, and whether it is near a stream or could enter a stream by flowing through ditches or storm sewers. If assistance is needed, the emergency coordinator should describe the containment status and specify any additional equipment needed. When reporting a spill, record the date and time of the call and the name of the person answering the call at the above number. Spill prevention plans are reviewed with facility personnel every year, and records of the training are kept at the facility.

***Spill/Release Response to Solid (Physical State) Waste***

Response to a non-liquid waste (solid physical state) will require the use of a shovel to place the material into a new container. If the material is powder-like/particulate matter, care should be taken so as not to create dust or cause the material to become airborne. After the bulk of the material is recovered, a damp absorbent pad may be used to clean up residual material that cannot be captured with the shovel.

Information on every spill will be recorded through an internal database. A notification of each

spill will be sent to the Corporate Environmental Health and Safety Department.

Reports of emergency incidents will be transmitted to the Secretary of the FDEP or designee within 15 days of occurrence. This report shall include:

1. Name, address, and telephone number of the owner of operator;
2. Name, address, and telephone number of the facility
3. Date, time, and type of incident (e.g., fire, explosion);
4. Name and quantity of materials involved;
5. The extent of injuries, if any;
6. An assessment of actual or potential hazards to human health or the environment, where this is applicable; and
7. Estimated quantity and disposition of recovered material that resulted from the incident.

**The facility will complete all permit condition spill reporting as required, and follow the requirements of Chapter 62-150, F.A.C. Hazardous Substance Release Notification.**

### *Containment Systems*

#### *Containerized Wastes*

The hazardous waste container storage area consists of three areas: the container storage area (CSA) located in the warehouse, the transfer waste storage area located in the warehouse, and the transfer waste storage area located in the Return/Fill station. These areas are shown in Figures 5.6-3 and 5.6-4. The containment system is free of cracks. Containers are stored on pallets whenever possible.

The container storage area shown in Figure 5.6-3 occupies a portion of the main building. This warehouse area has concrete floors, and a central collection trench to form a spill containment system within the area. The permitted container storage area has a 48' 3" X 78' 7" concrete floor that has a 2" slope towards one containment trench. The containment system was measured to have a capacity of 2,077 gallons. The maximum storage capacity in this area is 20,770 gallons- with 6,912 gallons being hazardous waste and the balance being various products. Waste allowed

for storage is paint wastes, immersion cleaner, dry cleaning solvent, parts washer solvent dumpster mud, tank bottoms, and oil filters. The types and number of each type of container may vary; however, the storage capacity will not be exceeded.

In the container storage area, containers are handled with a fork-lift and/or a hand-truck free of sharp points and stacked by hand. Every time a container is moved, the possibility exists that it will be tipped over, dropped, or punctured. To minimize the possibility of spillage, container lids are secured and containers are kept in an upright position. A small portable electric pump is available to quickly transfer the liquid from any leaking container into a safe container. Each route truck is equipped with a lift gate or an electric hoist. The appropriate device is used in the loading/unloading operation to minimize chances for spillage and/or employee injury. Containerized wastes at the Sanford facility are loaded/unloaded in the vicinity of the contained concrete dock on the northwestern side of the building (Figure 5.1 2) and return/fill dock. Because these areas are fully enclosed, spills originating in these areas should not come in contact with stormwater.

***FRS Wastes and Transfer Wastes***

Transfer wastes may be stored in the southern portion of the CSA and in the northwestern bay of the Return/Fill dock. The containment system in the warehouse is free of cracks and is sufficiently impervious to prevent seepage into and through the concrete. Since FRS wastes are transfer only, they are not required to have containment. Because these areas are fully enclosed within the building, spills originating in these areas should not come into contact with stormwater.

All containers are covered during movement and are located within diked, concrete floored areas to contain any potential spill. The small quantities of waste onsite at any time can be cleaned up immediately through the use of hand-held electric pumps, mops, wet/dry vacuums, or sorbent materials, should a spill occur. Any spilled waste is contained for offsite recycling/reclamation. All containerized waste movement is performed manually, by a pallet jack, or propane fueled forklift truck. Therefore, power outages are not expected to threaten employee safety.

***Return/Fill Station***

The return/fill station is located between the office and container storage area. A slight slope (2-3 inches) exists, which terminates at the sumps (2' diameter, 2' deep). The sloped floors and containment sump were measured to have a containment capacity of 3,745 gallons, which equates to a storage capacity of 37,450 gallons. A 20 ft. wide steel grate dock (approximately 33 inches above the floor) is located perpendicular to the floor and extends the full width of this area (Figure 5.6-4). Any spill which occurs on the concrete floor is directed by gravity into the sumps. Any residual remaining on the floor can be cleaned up immediately through the use of mops, wet/dry vacuums, or sorbent materials, should a spill occur. Spilled waste is contained and sent for recycling/reclamation.

Doors in this area include four overhead roll-up doorways for trucks entering/exiting the service building, two personnel doorway for employees entering/exiting the service building, one overhead doorway connecting the return/fill station and container storage area (warehouse), one doorway connecting the return/fill station and the container storage area (warehouse), and one doorway connecting the return/fill station and the offices. The office floor and the container storage floor are approximately 33 inches above the return/fill station floor and are flush with the steel grate dock. Therefore, spills originating in the return/fill station will go into the sumps beneath the grate in the return/fill area and will not flow into these areas. Based on the capacity of the return/fill station collection sumps and sloped floor, it is extremely unlikely that a spill would escape through the overhead doorways or two doorways entering/exiting the service building. The area just outside the service building return/fill station is asphalt covered. Because the return/fill station is fully enclosed and the pavement outside this area is sloped to carry water away from the building, spills originating in this area should not come in contact with stormwater.

***Tank Area***

The tank area (Figure 5.6-5) houses four 20,000-gallon tanks and is provided with more than 28,000 gallons of secondary containment, which is in excess of the single largest tank (20,000 gallons). This containment area is only slightly sloped. Any spilled material is removed by pump or wet vacuum. When rainwater accumulates in the containment area, and it has been verified that no spill has occurred, then the rainwater will be discharged to the ground surface.

*Revision 0 – 11/10/18*

Verification is done by visual inspections of the tank area. As stated above, the tank farm holds 4-20,000 gallon tanks (2-used oil, 1-used solvent, 1-clean solvent), so contamination (by spill or release) of any rainwater that has accumulated in the secondary containment will be easily identified visually. Only the Branch Manager or someone operating under his/her direct orders may discharge to the ground surface. If it is not possible to verify that a spill has not occurred or the water exhibits an iridescent sheen, then the rainwater will be pumped into the used parts washer solvent tank. Any spills which occur on the pad will be cleaned up and the area decontaminated. Decontamination methods are discussed later in this Plan. This decontamination will result in de minimis residue.

Employee training emphasizes the importance of inspection, maintenance, personal safety, and reporting of conditions with pollution incident potential. This training, coupled with the Safety-Kleen's containment system and immediate cleanup of any spills, eliminates or greatly minimizes the chance of contamination of ground water and/or surface water in the vicinity of the site. In addition, surface run-off at the site does not come in contact with stored products in the waste management area.

***DECONTAMINATION***

Once the spilled material has been cleaned up, the spill area and equipment used during the spill clean-up must be decontaminated and/or disposed, as described below.

**Concrete Surfaces/Containment Area**

- Concrete surfaces/containment areas will be cleaned with a detergent solution and then rinsed with hot water. The rinsate will be collected via wet vacuums and placed in containers. Visual inspection will be used to determine the success of the decontamination procedure.
- The intent of the surface decontamination is to prevent current or future releases of materials to the environment. Vigorous cleaning with detergent is sufficient to prevent releases to the environment during normal operations. Potential for hazards from residual

materials to future occupants of the facility are addressed in the closure plans for the facility and the decontamination procedures incorporated therein.

### ***Equipment***

The equipment used to clean the area includes mops, pails, scrub brushes, and a wet/dry vacuum. Equipment which is considered reusable (i.e., pails, wet/dry vacuum, hoses) will be washed with detergent, and wash water and rinsate will be collected for proper disposal. All non-reusable equipment and/or equipment which is not capable of being decontaminated will be containerized and disposed of as hazardous waste. Equipment used in a response will be deemed fit for use after being used in any response.

### ***Wash Water and Rinsate***

If the rinsate or other wastes generated in the clean-up process is determined to be hazardous, it will be properly disposed of as a hazardous waste; otherwise, the material will be disposed of as an industrial waste. It should be noted that wash water and rinsate will not be allowed to drain to surface waters.

## ***EMERGENCY RESPONSE EQUIPMENT AND COMMUNICATION***

Due to the small size of the facility, routine communication will be accomplished by voice communication. Fire alarms are available in the office, warehouse, and return/fill station – monitored by a 3<sup>rd</sup> party that will immediately contact the local fire department if the alarms are activated. Emergency alarms are available at the return/fill station and CSA – these alarms can be activated manually and sounds in the office, and local fire department to indicate an emergency situation. High level alarms are available at the tank farm. Telephones are used in case of a spill or fire emergency to summon assistance. Emergency numbers are posted by phones throughout the facility. Included with these phone numbers is the 24-hour Safety-Kleen spill number. Figure 5.6-1 provides the locations of fire extinguishers, first-aid kits, emergency eyewashes, alarms, and spill equipment. Other emergency response equipment (Table 5.6-1) is kept in a small storage area inside the warehouse. This equipment includes mops and buckets, soap, shovels, and spill sorbent pads. Rubber gloves, boots, pumps, and a wet/dry vacuum Cleaner are stored in an emergency supply area near the container storage area. Descriptions and

uses of the equipment are provided in Table 5.8-1. Adequate aisle space is provided in the container storage area for movement in an emergency situation. The City of Sanford supplies water for domestic use, decontamination, and fire fighting. The water pressure supplied by the City of Sanford was inadequate for fire-fighting purposes, so a booster pump has been installed at the facility. The fire protection system was installed and certified by the installation contractor in accordance with applicable fire codes.

Pails, hoses, and detergents are the primary equipment that will be used for decontamination. The equipment available at the facility for emergency situations is adequate for most cases. Large or serious emergency situations will be remediated by local emergency response teams or special emergency response or cleanup contractors. The facility is constructed and operates in accordance with National Fire Protection Association (NFPA) standards and applicable local ordinances. Applicable health and safety standards are also observed at the facility.

All facility communications or alarm systems, fire protection equipment, spill control equipment, and decontamination equipment will be tested and maintained as necessary to assure its proper operation in time of emergency.

### ***FIRE CONTROL PROCEDURES***

In the event of a fire at the facility, the following activities will be executed.

Call the Fire Department (page iii). [Note: Center aisles are available in container storage areas to permit fire department personnel to pass with fire fighting equipment.]

Act quickly with the fire extinguisher to put out the fire before it spreads.

Call the Police Department (page iii) to maintain traffic and on-lookers and local hospital (page iii) to notify the type and extent of injuries, if any.

### ***Ignitable Wastes***

All wastes and products are kept away from ignition sources--Personnel must confine smoking

and open flames to remote areas, separate from any solvent (e.g., outside front of facility). The parts washer solvent and paint waste handling areas are separated from the office area to minimize the potential for a fire to spread or injury to personnel to occur.

The tank farm is more than 20 feet from the property line as required in 40 CFR Part 264.198(b).. Likewise, the flammable storage area is 50 feet or more from the property line per 40 CFR Part 264.176. Both of these distances meet the NFPA code for storage of ignitable materials.

Ignitable wastes are handled so that they do not:

1. Become subject to extreme heat or pressure, fire or explosion, or a violent reaction--The parts washer solvents and paint wastes are stored in a tank or in containers, none of which are near sources of extreme heat, fire, potential explosion sources or subject to violent reactions. The tanks are vented and the containers kept at room temperature to minimize the potential for pressure build-up. The tanks are painted white to reflect sunlight and are vented to prevent pressure build-up.
2. Produce uncontrolled toxic mists, fumes, dusts, or gases in quantities sufficient to threaten human health--The vapor pressure of petroleum based parts washer solvent is low (2 mm mercury) and it and the paint waste may react with strong oxidizers and reactive metals only. Toxic mists, fumes, and dusts do not form in quantities sufficient to threaten human health since strong oxidizers are not handled at this facility and the solvent vaporization is minimal under normal working conditions.  
[Note: Drycleaning wastes are initially not flammable, but may produce toxic gases and hydrochloric acid at elevated temperatures (about 1,200°F).]
3. Produce uncontrolled fires or gases in quantities sufficient to pose a risk of fire or explosion--See "1" above and "4" below.
4. Damage the structural integrity of the Safety-Kleen facility--The parts washer solvent and paint wastes do not cause deterioration of the tank, drums, or other structural components of the facility.

### ***Incompatible Wastes***

Incompatible wastes are segregated in an appropriate manner in accordance with industry standards. All waste or products are kept away from ignition sources. Employees must confine

smoking or open flames to designated safe areas.

Materials are handled so they do not:

- a. Generate extreme heat or pressure, fire or explosion, or violent reaction.
- b. Produce uncontrolled toxic mists, fumes, dusts, or gases in sufficient quantities to threaten human health.
- c. Produce uncontrolled fires or gases in sufficient quantities to pose a risk of fire or explosion.
- d. Damage the structural integrity of the Safety-Kleen facility.

Adequate aisle space is maintained to allow unobstructed movement of personnel, fire protection equipment, and decontamination equipment to any area of the facility operation in an emergency.

### ***External Factors***

The design of the facility is such that a harmful spill is highly unlikely to occur from most external factors. The storage tanks are inaccessible to non-Safety-Kleen personnel. Also, the container storage areas are in buildings which are inaccessible to unauthorized personnel.

1. Vandalism - Only extreme vandalism would result in a solvent spill or fire. Responses to spills and fires are described in a previous section of this Plan.
2. Employee Strikes - A strike would not result in a solvent spill or fire.
3. Power Failure - A power failure would not result in a spill or fire. Should a power failure occur, all activities requiring electricity will cease.
4. Flooding - The waste management facility elevation is above the projected 100-year flood plain; therefore, a 100-year flood will not affect the facility.
5. Storms or Cold Weather - The solvent return/fill station, tank storage, and the container storage areas are roofed to eliminate the possibility of rain entering the waste management areas. Neither snow, cold weather, nor stormwater is expected to affect the facility.
6. Hurricanes – Safety-Kleen will adhere to the following procedures in the event of an approaching hurricane:

### **Hurricane Watch**

- Compile list of employees with telephone numbers. Give each a call-in number for the branch (Branch Manager cell phone or branch number) in the event operations are interrupted.
- Prepare battery-operated radio (if the facility has one) and other equipment in the case of power outage.
- Complete cleanup of facility property – all empty drums, containers, trash containers, chairs, spill kits, etc. should be brought inside the facility structure.
- Facility services should be restricted to local routes (no more than 30-45 minutes from the facility) in case weather conditions deteriorate.
- Ensure any areas which may be exposed to rainwater are clean and secure filling nozzles.
- Route trucks should be re-fueled prior to the storm, emptied of all wastes and product, secure lift gates and side compartments.
- Ensure all bulk collection trucks have off-loaded into the facility storage tank or BIDS terminal.
- Move trucks inside building as possible and park the remaining trucks as close to the building as possible (preferably at the bay doors).
- Secure computers, monitors, etc. and wrap in plastic with tape.
- If possible schedule solvent tanker in a manner, which would allow the maximum volume of liquid to remain in the storage tanks as the structural integrity of a tank increases with content volume. Camlock all ends of hose fittings and turn off valves at the storage tanks.
- After all preparation has concluded, all employees should be sent home and the facility secured. Turn off main breaker.

### **Hurricane Warning**

- All employees are excused from work if their county of residence is put under a hurricane warning. However, the branch manager or other key personnel may be available to perform some last minute activities if weather permits.
- Notification, via incident alert system or telephone, that a hurricane warning has been posted.

- Walk-around of facility to ensure all preparation work conducted under the hurricane watch has been completed.
- Completion of any remaining items that were not finished.

**Following Hurricane**

- Depending on the intensity of the storm, the following actions should be carried out as soon as conditions permit.
- Employees should phone-in, following local government employee guidelines, for returning to work.
- Branch manager and/or the emergency coordinator should be the first people to enter the facility. Perform a complete walk-around of the facility checking for security of premises, waste management areas, determine if there are any safety issues that pose risk for employees, inspect for any damage, looting, or theft and generate a list of items to report.

***EVACUATION PLAN***

In an uncontrolled emergency, all persons are to be evacuated from the area by means of a verbal cry or use of the public address system and are to assemble across the street from the entrance drive to the facility to assure that all personnel are accounted for and out of the area. The emergency coordinator may elect to use a car horn as a means of emergency notification. A head count will be performed by the emergency coordinator.

The Fire Department must be notified at the time of evacuation either from a safe onsite building or neighboring facilities. Clearly marked exits exist in warehouse and office area.

***AVAILABILITY AND REVISION OF THE PREPAREDNESS, PREVENTION, AND CONTINGENCY PLAN***

This Plan and all revisions to the Plan are kept at the facility and regularly updated throughout the operating life of the facility. Copies of this document are provided to local authorities and organizations listed under the Preparedness and Prevention Plan, which may be called upon to provide emergency services. This Plan and all revisions to the Plan are made readily available to employees working at the facility.

This Plan is reviewed and updated, if necessary, whenever:

1. The facility permit is modified to allow new process wastes to be stored or treated, or applicable regulations are revised;
2. The list or location of emergency equipment changes;
3. The facility changes in its design, construction, operation, maintenance, or other circumstances in a way that:
  - a. Materially increase the potential for fires, explosions, or releases of hazardous waste or hazardous waste constituents, or
  - b. Changes in response necessary in an emergency.
4. The names, addresses, or phone numbers of emergency coordinators change;
5. The employee assigned to each emergency task changes, or
6. The plan fails when implemented in an emergency.

#### ***ARRANGEMENTS WITH LOCAL AUTHORITIES***

Arrangements have been made to familiarize the Police Department, Fire Department, and local emergency response teams with the layout of the facility, properties of hazardous materials handled (Material Safety Data Sheets) at the facility and associated hazards, places where facility personnel would normally be working, entrances to and roads inside the facility, and possible evacuation routes. The local fire department also conducts annual fire inspections to ensure we are in compliance, and this also gives the Department an opportunity to familiarize themselves with the layout of the facility in person.

Arrangements have been made to familiarize the local hospital with the properties of hazardous waste handled at the facility and the types of injuries or illnesses which would result from fires, explosions, or releases at the facility.

Appendix A of this Plan (located at the end of this section) includes copies of example distribution letters for transmittal. Copies of updated transmittal letters are kept on file at the facility.

*Revision 0 – 11/10/18*

Sanford Fire Department  
1303 South Lake Avenue  
Sanford, FL 32771

RE: Safety-Kleen Systems, Inc., 600 Central Park Drive, Sanford, FL 32771

Dear Sir/Madam:

Under terms of the Environmental Protection Agency (EPA) regulations 40 CFR 264, Subpart D, Safety-Kleen Systems, Inc. (SK) must provide local police, fire departments, hospitals, and state or local emergency response teams with a copy of the contingency plan for the above-referenced facility, and any revisions to the plan. A copy of the updated contingency plan is enclosed for your files. Please review this updated contingency plan.

EPA regulations 40 CFR 264, Subpart C, require that SK attempt to make arrangements for the provision of emergency assistance. Emergency assistance for this facility may be needed from the police and fire departments, state emergency response teams, and hospitals. The completion and return of the enclosed form will acknowledge receipt of this update to the contingency plan and provides your agreement to be available for emergency assistance.

Thank you for your cooperation in this matter. Should you have any questions or desire to visit our facility, please contact me at (407) 321-6080.

Sincerely,

Branch Manager  
Safety-Kleen – Sanford

RE: Safety-Kleen Systems, Inc., 600 Central Park Drive, Sanford, FL 32771

Dear Branch Manager:

This is to acknowledge that the Sanford Fire Department has been made aware of the potential need for emergency assistance associated with the operation of the Safety-Kleen Systems, Inc. (SK) facility at 600 Central Park Drive, Sanford, FL. The Sanford Fire Department understands that the emergency coordinator is available to provide additional information on the nature of assistance that may potentially be required, type of physical and chemical hazards that may potentially be encountered, and the type of injury or illness that may potentially occur.

This is to acknowledge receipt of the updated contingency plan information for the Sanford, Florida facility.

The Sanford Fire Department \_\_\_\_\_ (agrees/declines) to be available to provide emergency assistance for the Safety-Kleen Systems, Inc. facility at 600 Central Park Drive, Sanford, FL 32771.

Sincerely,

Inspector Name	
Area of Inspection	
Inspection Date and Time	

**CO CSA Inspection Instructions**

Note condition of inspection items. If item does not apply to an area, mark N/A. All unsatisfactory findings must be explained below. Include any repairs, changes or other remedial actions required or performed.

**CO CSA Inspection Items**

Container Placement and Stacking - Check for evidence of failure (e.g., containers on pallets, pallets too high, unstable, other).	
Sealing of Containers - Check for evidence of failure (e.g., containers not closed or sealed, open).	
Labeling of Containers - Check for evidence of failure (e.g., no label, improper label, content, other).	
Container Integrity - Check for evidence of failure (e.g., condition, bulging, leaks, rust, corrosion, other).	
Pallets - Check for evidence of failure (e.g., broken, loose, condition).	
Doors - Check for evidence of failure (e.g., indoor area, broken or not working as intended).	
Base/ Foundation/ Roof - Check for evidence of failure (e.g., cracked, gaps, other).	
Berms/ Racks - Check for evidence of failure (e.g., cracks, gaps, broken, other).	

Debris and Refuse - Check for evidence of failure (e.g., proper storage, location, container type, other).	
Exit Signs - Check for evidence of failure (e.g. missing, lamps, battery backup, other).	
Aisle Space - Check for evidence of failure (e.g., minimum 2 ft required, other).	
Containment Area - Check for evidence of failure (e.g., secondary containment, curbing, floor, cracks, deterioration, ponding or wet spots, other).	
Sumps - Check for evidence of failure (e.g., cracks, ponding or wet spots, pitting or deterioration, other).	
Loading/ Unloading Areas - Check condition of area (e.g., available equipment, spill response, containment, pad condition, valve access box, ponding or wet spots, other).	
Communication and Alarm System - Check for evidence of failure (e.g., test function, siren, strobe, other).	
Storage Capacity - Check for acceptable limit (e.g., area or permit restrictions, type restriction, volume limit, other).	
Bonding and Grounding - Check for evidence of failure (e.g., loose, broken, corrosion or deterioration, other).	
Pumps - Check for evidence of failure (e.g., deterioration or broken, leaks, other).	
Inventory Age - Check for acceptable limit (e.g., within area limits, permit restrictions, other).	
Satellite Accumulation Containers - Check for condition and appropriate for area (e.g., filter/basket, solids, label and marking, other).

Inspector Name

Area of Inspection

Inspection Date and Time

**CO Safety Security Inspection Instructions**

Note condition of inspection items. If item does not apply to an area, mark N/A. All unsatisfactory findings must be explained below. Include any repairs, changes or other remedial actions required or performed.

**CO Safety Security Inspection Items**

Perimeter Fences - Check for evidence of failure (e.g., broken ties, corrosion, holes, distortion, other).

Gates/External Warehouse Doors - Check for evidence of failure (e.g., locking mechanism, broken ties, corrosion, holes, distortion, direct access doors working properly, other).

Warning Signs - Check for evidence of failure (e.g., missing, faded, other).

Exit Signs - Check for evidence of failure (e.g., missing sign, illumination, lamp bulbs, battery backup, other).

Exits/Firelanes/Evacuation Routes - Check that all routes are clear or unobstucted.

Lighting System - Check for evidence of failure (e.g. expired lamps, effectiveness, location, other).

Emergency Lighting System - Check for evidence of failure (e.g., expired lamps, battery backup, effectiveness, other).

Accessibility of Safety Equipment/Protective Gear - Check for evidence of availability (e.g.,

hardhats, faceshields, goggles, safety glasses, boots, gloves, aprons, uniforms, duct tape, absorbents, other).	
Adequate Supply of Safety Equipment/Protective Gear - Check for evidence of availability (e.g., cleanliness, inventory available, other).	
Condition of Safety Equipment - Check for evidence of failure (e.g., review PPE for damage or excessive wear, other).	
Breathing Apparatus Accessibility - Check for evidence of availability (e.g. SCBA respirators, equipment, other).	
Breathing Apparatus Adequate Supply/Full Charge - Check for evidence of availability (e.g., SCBA tanks, charged, other).	
Breathing Apparatus Condition - Check for evidence of failure (e.g., SCBA damage, other).	
First Aid Kits - Check for evidence of availability (e.g., adequate inventory, other).	
Bloodborne Pathogen Kits - Check for evidence of availability (e.g., adequate inventory, other).	
Emergency Eyewashes - Check for evidence of failure (e.g., disconnected or malfunctioning valves, inadequate pressure, inaccessible, malfunctioning drain, leaking, other).	
Emergency Showers - Check for evidence of failure (e.g., disconnected or malfunctioning valves, inadequate pressure, inaccessible, leaking, other).	
Internal/External Communication - Check for evidence of failure (e.g., inadequate supply of phones or radios, malfunctioning intercom, telephones not working properly, emergency alarm does not work, phone moved from proper location, other).	
Fire Extinguishers - Check for evidence of failure (e.g., overdue inspection, not charged,	

inaccessible, other).	
Absorbent Supply - Check for evidence of availability (e.g., adequate inventory, other).	
Recovery Drum Supply - Check for evidence of availability (e.g., adequate inventory, other).	
Respirators and Cartridges - Check for evidence of availability (e.g., adequate APR inventory, other).	
Fire Suppression System Accessibility - Check for evidence of failure (e.g., monitors, pull stations, alarms, other).	
Fire Suppression System Operable - Check for evidence of failure (e.g., test, other).	
Water Lines/Hydrants - Check for evidence of failure (e.g., blocked, broken, other).	
Alarm Systems - Check for evidence of failure (e.g., test, other).	
Fire Blankets - Check for evidence of availability (e.g., adequate inventory, other).	
Strainer on Fire Suppression System - Check for evidence of failure (e.g., functioning as intended, other).	
Surveillance System/Guard Service - Check for evidence of failure (e.g., equipment or service provided and functioning properly, other).	
Supplied Air Delivery System and Reserve - Check for evidence of failure (e.g., system operational, equipment functioning, other).	
Decontamination Equipment/Spill Clean-up Equipment - Check for evidence of availability (e.g., adequate supply of shovels, mops, cleaning solvents, available inventory, other).	
Portable Sump Pumps - Check for evidence of availability (e.g., adequate inventory, functioning properly, other).	
Gasoline Pumps - Check for evidence of failure (e.g., broken parts, leaks, other).	

Loud Speakers - Check for evidence of failure (e.g., test, other).	
Chocked Wheels on Parked Vehicles - Check for evidence of failure (e.g., chocks not used, missing, deteriorated, other).	
Cylinders Secure - Check for evidence of failure (e.g., properly stored, secured, chained, other).	
Ventilation Operable - Check for evidence of failure (e.g., system working as intended, other).	
Fall Protection - Check for evidence of availability (e.g., adequate inventory, integrity of equipment, other).	
Electrical Boxes - Check for evidence of failure (e.g., closed, not blocked, marked properly, other).	
Emergency Contact Info Posted - Check for evidence of availability (e.g., up-to-date postings, location requirement, other).	
Hearing Protection Available - Check for evidence of availability (e.g., type appropriate per location, other).	
Housekeeping - Check for evidence of failure (e.g., blocked egress, proper storage, procedure followed, other).	
Portable Compressor - Check for evidence of availability (e.g., adequate inventory, functioning properly, other).	
Lime Supply - Check for evidence of availability (e.g., adequate inventory, other).	
QC Lab Hood - Check for evidence of failure (e.g., functioning properly, other).	
Rolloff Parking Area - Check for evidence of failure (e.g., housekeeping, staging, other).	
Dumpster/Outside Containers - Check for evidence of failure (e.g., housekeeping, condition, appropriate use and storage, other)	

Stormwater Collection System - Check for evidence of failure (e.g., functioning properly, damaged equipment, integrity, other).	
Rally Point - Check for evidence of failure (e.g., location identified, communication, other).	
Visitor Log - Check for evidence of failure (e.g., available, communication, proper use, other).	
Contingency Plan - Check for evidence of failure (e.g., available, up-to-date, communication, other).	
Wind Instrument/Wind Sock - Check for evidence of failure (e.g., operational, functioning properly, not broken, other).

PERMITTED AND TRANSFER WASTES**

Waste Type	Process Code(s)	Estimated Annual Amounts (Tons)	Waste Codes
Spent Parts Washer Solvent	S01* S02**	374	D001 and D-codes listed in note below
Branch-Generated Liquids/Solids (Debris)	S01*	9	D001 and D-codes listed in note below; F002, F003, F005
Dumpster Sediment	S01*	Included above	D001 and D-codes listed in note below
Tank Bottoms	S01*	Included above	D001 and D-codes listed in note below
Used Immersion cleaner (IC 699)	S01*	6	D-codes listed in note below
Dry Cleaning Waste (Perchloroethylene)	S01*	7	F002 and D-codes listed in note below
Dry Cleaning Waste (Non-perchloroethylene)	S01*	Included above	D-codes listed in note below
Paint Wastes	S01*	18	D001, F003, F005 and D-codes listed in note below
Retain Samples From Used Oil Operations	S01*	3	D008, D018, D039, D040
Spent Aerosol Cans	S01*	< 1	D001, D035
Fluid Recovery Service (FRS)	S01***	100	Transfer wastes-waste codes assigned by generator
Aqueous Brake Cleaner	S01***	14	Transfer waste-waste codes assigned by generator
Mercury-Containing Lamps/Devices	N/A***	Less than 2.2	N/A-handled as non-hazardous transfer wastes

**NOTES:**

D-Codes: D004, D005, D006, D007, D008, D009, D010, D011, D018, D019, D021, D022, D023, D024, D025, D026, D027, D028, D029, D030, D032, D033, D034, D035, D036, D037, D038, D039, D040, D041, D042, D043

\* This waste will be stored in containers in the container storage area. The maximum capacity in the container storage area for hazardous waste is 6,912 gallons.

\*\* The spent parts washer solvent storage tank has a capacity of 20,000 gallons and may be filled up to 19,000 gallons.

\*\*\* This waste will be held for transfer in containers in the transfer area and designated mercury bulb storage area.

**TABLE 5.2-1  
INSPECTION SCHEDULE**

Area/Equipment	Specific Item	Types of Problems	Frequency of Inspection
Safety Equipment	Fire Extinguishers	Overdue inspection Inadequate charge Inaccessible	Weekly
	Eyewash	Disconnected/malfunctioning valves Pressure Inaccessible	Weekly
	First-Aid Kit	Inadequate inventory	Weekly
	Spill Cleanup Equip PPE	Inadequate supply Inadequate supply	Weekly Weekly
Security Equipment	Gates and Locks	Sticking, corrosion, lack of warning signs	Weekly
	Fence	Broken ties, corrosion, holes	Weekly
Storage Tanks	Volume in Tank	Never more than 95% full	Daily
	Tank Exterior	Rusty, loose anchoring, grounding, wet spots, leaks, discoloration	Daily
	High Level Alarms Volume Gauges	Malfunctioning siren/light Disconnected/ sticking, condensation	Daily Daily
Secondary Containment	Bottom and Walls	Cracks, debris, ponding, wet spots, stains, deterioration, displacement, leaks	Daily
	Rigid Piping and Supports	Distortion, corrosion, paint failures, leaks	Daily
Transfer Pumps and Hoses	Pump Seals	Leaks	Daily
	Motors	Overheating	Daily
	Fittings	Leaks	Daily
	Valves	Leaks, sticking	Daily
	Hose Connections and Fittings	Cracks, loose, leaks	Daily
	Hose Body	Crushed, cracked, thin spots, leaks	Daily

**TABLE 5.2-1  
INSPECTION SCHEDULE**

Area/Equipment	Specific Item	Types of Problems	Frequency of Inspection
Return/Fill Station	Wet Dumpster	Excess sediment build-up, leaks, rust, split seams, distortion, deterioration, excess debris	Daily
Container Storage Area	Total Volume in Storage Condition of Drums	Exceeds permitted limit Missing or loose lids, labels missing, incomplete or incorrect, rust, leaks, distortion	Daily Daily
	Stacking/Placement/Aisle Space	Containers not on pallets; unstable stacks, inadequate aisle space	Daily
Secondary Containment	Curbing, Floor and Sump	Ponding/wet spots, deterioration, displacement, leaks, other	Daily

Emergency Alarm	Manual	Return/Fill Area/Back Dock	3
High Level Alarms	Automatic	Tank Farm	1

TABLE 5.8-1

## DESCRIPTION AND USES OF EMERGENCY EQUIPMENT

Item	Location	Use/Description
Gloves	Warehouse cage/Emergency Equipment Area	To be used when handling the solvents and chemical containers.
Safety Glasses or Face Mask	Warehouse cage/Emergency Equipment Area	To be worn when loading or unloading solvent.
Plastic Aprons	Warehouse cage/Emergency Equipment Area	For situations where a solvent may get on the workers clothing.
Eyewash Stand	Container storage area return/fill/area/tank farm	The workers should operate the stand and Become familiar with its operation
Showers	Return/fill/container storage area/tank farm	These are used for emergency exposure situations.
Fire Extinguisher	Office/Return Fill/Warehouse/Tank Farm	An ABC extinguisher is a universal system used on paper, wood, and electrical, as well as solvent fires. The extinguishers must be full and carry an inspection tag.
Absorbent Material	Loading/Unloading Area/Warehouse	An adequate supply will be on hand to handle small spills. A 50 lb bag will also be kept in the warehouse to remediate and prevent spread of large spills
Portable Pumps Wet/Dry Vac	Warehouse	For use in picking up liquid spills in the container containment area, or other paved areas, and transfer materials associated with spills
Recovery Containers	Warehouse	Emergency storage of spilled product, cleaning fluids, or other materials associated with spills
Plastic	Warehouse	Used for containment of decontamination zones
Duct Tape	Warehouse	Taping of protective clothing, plastic, and other uses
First-aid	Office/Warehouse	Minor first-aid needs and health problems
Shovels/Mops	Warehouse	Used to collect spills and residue
Communication Equip	Facility Wide	Phones with intercom systems in office/warehouse for internal and external communications
Decon. Equip.	Warehouse	2 brushes, box of detergent, rags, available for decon of clean up equip.
Fire Alarm	Office/Warehouse/Return Fill	To be pulled in the event of a fire at the facility that requires outside assistance
Emergency Alarm	Return/Fill Station/Back loading dock	To notify personnel in the office of an emergency situation in the back of the facility
High-level Alarm	Tank Farm	Automatic alarm that will sound in the event tanks reach a certain level in order to prevent over-filling

***PERSONNEL TRAINING***

This section of the permit application describes Safety-Kleen’s training program. All position descriptions referenced may not be present at this facility. Training plan outlines, job descriptions, training content, frequency and techniques are described as well as the implementation of the training program. The information presented in this section is a representative example of employee training at Safety-Kleen. Variations in individual training may occur.

The purpose of Safety-Kleen’s training program is to familiarize employees with environmental regulations, records, and emergency procedures so they will perform their activities in the safest and most efficient manner possible.

***DESCRIPTION OF TRAINING PROGRAM***

Each employee is trained to operate and maintain the service center safely, and to understand hazards unique to job assignments. New managers must complete a formal introductory training program before starting their jobs, with annual review and update thereafter. New Sales and Service Representatives and all other hazardous waste employees must undergo a combination of classroom and on-the-job training prior to working with hazardous waste. Personnel involved in direct handling of hazardous waste do not work unsupervised until they have completed the entire initial hazardous waste training course.

***Outline of Training Program***

An outline of the training program given initially to employees who manage or handle Hazardous Waste at the Branch is presented in Table 6.1-1.

***Job Title/Job Description***

Job descriptions for employees who would be expected to manage or handle hazardous wastes are provided in Tables 6.1-2 through 6.1-13. Table 6.1-14 includes initial and continuing training topics that branch personnel receive.

***Training Content, Frequency, and Techniques***

Employee training is accomplished using classroom, online, videotape, written, and on-the-job methods. All new employees whose responsibilities require 24-Hour Hazardous Waste Operations and Emergency Response (Hazwoper) training will receive at least five days of instruction at the Safety-Kleen Training Center. This training program provides a consistent and quality hazardous waste operations training program.

The training that a new operations employee will receive is divided into two parts.

- Two weeks of employment will be spent at the Safety-Kleen Training Center. The new employee will receive a company orientation, including a review of company benefits, and hazardous waste operations training.
- The second part of new employee training is site specific training. When the new employee returns to the Branch, qualified individuals delegated by Branch management will complete facility specific training. This will include such things as permit requirements, emergency contingency plan training, location of emergency equipment, etc.

The job tasks a person performs will dictate the type of instruction required. Courses taught at the Safety-Kleen Training Center will include a company and benefit orientation, 24-hour Hazwoper training, Hazardous Materials Transportation Skills (HMTS) training, and Driver Safety training, as well as job specific training.

The following presents the specific training requirements for new Safety-Kleen employees who will manage or handle hazardous waste.

Training of New Branch General Managers: New Branch Managers are trained for several weeks before they begin their new positions. This training is given on-the-job. During this training, the new manager reviews environmental records and learns the recordkeeping requirements. These records include: manifests, personnel records, training records, service center inspection records, and spill reports. At least eight hours of this initial training consists of an introduction to environmental regulations, and a review of the Part B, including the Waste Analysis Plan, Preparedness and Prevention Plan, Contingency Plan, Training Plan, and Closure Plan.

Training of New Customer Service Manager: The Customer Service Manager is responsible for administrative operations at the Branch. Training is on location in the form of periodic training topics. This training includes an introduction to environmental regulations (including the Resource Conservation and Recovery Act), health and safety issues, emergency response and inventory (including waste) reconciliation methods. Additional time is spent reviewing past environmental compliance at the facility. Also, while being trained at the Branch where they will be stationed, a new Customer Service Manager will review environmental records and learn the recordkeeping and inspection requirements. These records include: manifests, personnel records, training records, service center inspection records, and spill reports.

Training of New Secretaries: Secretaries are trained in the proper recordkeeping procedures as soon as they begin working for Safety-Kleen. While they are not usually responsible for preparing the documentation, they must check it for accuracy and completeness and then process or file it as required. Additional training is overseen by Branch Manager and is done within six months of starting. This training is often presented in periodic training topics on emergency response, shipping documents (including manifests), drum labels, and other safety and environmental compliance issues.

Training of New Sales and Service Representatives, Market Sales Specialists: These personnel are trained on-the-job for two weeks during which they are introduced to manifests, service center inspection records, and training records. Additional training is in the form of periodic training topics and a review of the Contingency Plan.

Training of New Material Handlers: A Material Handler is trained to maintain the service center and assist the other Branch employees in their tasks. The Material Handler may be a designee to perform Branch inspections and must be trained by the Branch Manager.

Annual Training: On an annual basis, employees are trained using the programs prepared and updated annually by the EHS and Training Departments which contain the topics in Table 6.1-14. This training also includes updates on environmental regulations, review of the Contingency Plan and a review of RCRA inspection criteria. This review is in the form of classroom instruction, videotapes, and a review and discussion of the storage service center permit/application. In addition, periodic sessions on changes in environmental regulations are issued by the EHS Department and must be attended by all Branch personnel.

### ***Training Director***

The training is directed by Safety-Kleen's Training and Development and EHS Departments, which operate out of the Corporate Office in Richardson, Texas. Each Environmental Health and Safety Manager who works in this department is responsible for compliance of the service centers in a given geographic area of the country. The EHS Department, in coordination with the facility, must:

- Provide a training program which addresses the requirements of environmental regulations and corporate policy.

- Notify the proper authorities, oversee remedial actions, and submit a written report to the state after an emergency situation has occurred;
- Assure that environmental permits are submitted and updated as required;
- Manage any environmental compliance issues which exceed the resources available at the service center level; and
- Participate in training new Branch employees and conducting Annual Refresher Training.

Qualifications for individual staff members of the EHS Department who conduct training at the Branch are available upon request.

#### ***Relevance of Training to Job Position***

Each employee is trained to operate and maintain the service center safely and to understand hazards unique to their job assignment. Safety-Kleen's training programs are designed to give employees appropriate instruction regarding the hazardous waste management procedures they will encounter in performing their respective duties. Since the handling of hazardous materials is a large part of the operations of the service center, all employees are given training in environmental regulations, transportation regulations, the Preparedness and Prevention Plan, and the Contingency Plan.

#### ***Training for Hazardous Waste Management***

As described previously, all employees are trained in the aspects of hazardous waste management which are relevant to their position. This includes job-specific hazards and necessary precautions, emergency response, and proper recordkeeping. This training is given initially and updated annually.

***Training for Contingency Plan Implementation***

All employees are trained in Contingency Plan implementation, through initial training yearly refresher courses. Employees are trained on the contents of the Contingency Plan as well as criteria for implementation.

***Training for Emergency Response***

All employees are trained in emergency response procedures through both initial training and yearly refresher courses. The emergency training involves spill and fire prevention as well as remedial action procedures. Employees are also trained to recognize when evacuation and outside assistance may be necessary.

***Training for Handling Mercury-Containing Lamps and Devices***

As a registered transporter and storage facility for mercury-containing lamps and devices destined for recycling, the Branch has certified that employees handling spent lamps or devices are trained in the applicable proper handling and emergency cleanup and containment procedures, and that these emergency procedures will be kept at the Branch for inspection upon request by the FDEP.

***Personnel Training Records***

All personnel training is documented and the documentation is kept on file at the Branch until closure for active employees, and three years for employees that have terminated their employment with Safety-Kleen. Documentation includes the training received, employee name, and the date of training.

TABLE 6.1-1

## OUTLINE OF TRAINING TOPICS

	Topic	Course
Monday	Welcome / Introductions	Orientation
	Overview/History/Products/Locations	Orientation
	Policies/Benefits	Orientation
	Orientation Activity and Quiz	Orientation
	Blood Borne Pathogens	24-Hour Hazwoper
	Regulatory Compliance	24-Hour Hazwoper
	Hazard Recognition	24-Hour Hazwoper
	Hazard Communication/WHMIS	24-Hour Hazwoper
Tuesday	Topic	
	Hazard Communication/WHMIS	24-Hour Hazwoper
	Test 1	24-Hour Hazwoper
	Personal Protective Equipment (PPE)	24-Hour Hazwoper
	Decontamination (Decon)	24-Hour Hazwoper
	PPE/Decon Practical	24-Hour Hazwoper
	Respiratory Protection	24-Hour Hazwoper
	Respiratory Protection Practical	24-Hour Hazwoper
Wednesday	Topic	
	Toxicology	24-Hour Hazwoper
	Test 2	24-Hour Hazwoper
	Drum Handling	24-Hour Hazwoper
	Container Handling Practical	24-Hour Hazwoper
	Exposure Monitoring	24-Hour Hazwoper
	Medical Surveillance	24-Hour Hazwoper
	Hearing Conservation	24-Hour Hazwoper
	Ergonomics	24-Hour Hazwoper
	Fire Protection	24-Hour Hazwoper
	Confined Space/Lockout-Tagout	24-Hour Hazwoper
	Fall Protection	24-Hour Hazwoper
	Electrical Safety	24-Hour Hazwoper
Thursday	Topic	
	Site Health & Safety Plans	24-Hour Hazwoper
	Test 3	24-Hour Hazwoper
	HMTS Regulations/Trans. Cont. Plan	Hazardous Materials
	Hazard Classes	Transportation Skills
	Shipping Papers	↓
	Labeling & Marking	↓

**TABLE 6.1-2**

**JOB DESCRIPTION BRANCH GENERAL MANAGER**

Position Title: Branch General Manager (BGM)

Reporting Relationship: Reports to District Manager

**Qualifications:**

- College degree or equivalent sales/management experience.
- Must have five (5) years of progressively responsible branch sales and management experience.
- Must possess leadership abilities, and have the capacity to interface effectively with Branch, District, Region, and Marketing personnel.

**Position Overview:** Overall responsibility for Branch operations including, but not limited to, growth, profit and loss, asset management, employee oversight. Exhibit and maintain knowledge of hazardous waste regulations in addition to all Safety-Kleen policies and procedures.

**Essential Job Functions and Responsibilities:**

- Profit and Loss
- Customer retention
- Employee turnover
- Environmental, Health & Safety compliance
- Personnel management with HR assistance
- Employee recruiting and training
- Fleet management
- Community relations
- Ethical business practices
- Distribute and manage sales reports
- Monitor sales/service activities

**TABLE 6.1-3**

**JOB DESCRIPTION LEAD SECRETARY**

Position Title: Lead Secretary

Reporting Relationship: Reports to Branch General Manager

**Qualifications:** Must be a high school graduate with good written and verbal communications skills, interpersonal skills and computer knowledge.

**Position Overview:** Lead Secretary must possess the ability to interact efficiently with Branch General Manager, and Customer Service Manager. Directs all paperwork flow and must exhibit a thorough knowledge of Hazardous Waste regulations with regard to responsibilities as well as all Safety-Kleen policies and procedures. Coordinates administrative staff training on all issues, as well as for facility.

**Essential Job Functions and Responsibilities:**

- Supervise Branch Secretaries
- Verification of sales and hazardous waste documents
- Ensure proper completion of facility operating log, proper maintenance of accounts receivable, bank deposits, manifests, and other administrative areas
- Assists management in incident response
- Maintain training database
- Coordinate personnel requirements such as DOT physicals, employee physicals, employee start packs, and workers compensation claims, etc.
- Ensures all contractors are signed in to the facility record
- Provides corrections for annual reports
- Maintains customer information – EPA ID numbers, etc.
- Oversees FRS/Lab correspondence
- Participates in hiring and training of Administrative staff
- Maintain branch level Customer Service/Collection procedures
- Perform other duties as assigned by BGM

**TABLE 6.1-4**

**JOB DESCRIPTION BRANCH SECRETARY**

Position Title: Branch Secretary

Reporting Relationship: Reports to Lead Secretary

**Qualifications:** Must be a high school graduate with good written and verbal communication skills, interpersonal skills and computer knowledge.

**Position Overview:** Branch Secretary must possess the ability to interact with effectively with Lead Secretary, Branch Manager, and Customer Service Manager. Directs paperwork flow and must exhibit a thorough knowledge of Hazardous Waste regulations with regard to responsibilities as well as Safety-Kleen policies and procedures.

**Essential Job Functions and Responsibilities:**

- Verify sales and hazardous waste documents
- Maintenance of accounts receivable, bank deposits, manifests, and other key administrative areas
- Corrections for annual reports
- Oversees FRS/Lab correspondence
- Maintain Branch level Customer Service/Collection procedures
- Perform other duties as assigned by management

**TABLE 6.1-5**

**JOB DESCRIPTION LEAD MATERIAL HANDLER**

Position Title: Lead Material Handler

Reporting Relationship: Reports to Branch General Manager

**Qualifications:** High school graduate, and the ability to pass CDL and other requirements.

**Position Overview:** Responsible for monthly inventory, warehouse housekeeping, operation of Return/Fill. Exhibit and maintain knowledge of hazardous waste regulations (labeling/markings of containers, required aisle spacing, facility operating inspections, and waste shipments).

**Essential Job Functions and Responsibilities:**

- Oversee operation of Return/Fill
- Assist in training of Material Handlers
- Act as escort for government inspectors in the absence of Branch General Manager, Customer Service Manager, or Environmental Manager
- Ensure proper maintenance of facility operating log and compliance with site specific regulatory issues
- May act as emergency coordinator and assist management in incident response
- Monitor contractors working on site
- Oversee facility housekeeping schedule
- Other duties as directed by BGM

**TABLE 6.1-6**

**JOB DESCRIPTION MATERIAL HANDLER**

Position Title: Material Handler

Reporting Relationship: Reports to Lead Material Handler

**Qualifications:** High school graduate and ability to pass CDL and other requirements.

**Position Overview:** Takes direction from the Lead Material Handler, and is involved in operation of the return/fill station, warehouse housekeeping, containerized waste movement within the facility. Exhibit knowledge of hazardous waste regulations regarding (labeling/marketing of containers, ensuring required aisle spacing in storage areas, assisting in staging waste for outbound shipment).

**Essential Job Functions and Responsibilities:**

- Operation of Return/Fill
- Facility housekeeping
- Other duties as directed by Lead Material Handler

**TABLE 6.1-7**

**JOB DESCRIPTION CUSTOMER SERVICE MANAGER**

Position Title: Customer Service Manager

Reporting Relationship: Reports to the Branch General Manager

**Qualifications:**

- College degree or equivalent sales/management experience
- Must have three (3) years of progressively responsible branch sales/service and management experience
- Must possess leadership abilities, and have the capacity to interface effectively with Branch, and District personnel

**Position Overview:** Ensure optimum customer service leading to retention and expansion of Branch business. Exhibit and maintain knowledge of hazardous waste regulations.

**Essential Job Functions and Responsibilities:**

- Assure Customer satisfaction and retention
- Recruit and train Sales and Service Representatives
- Reduce employee turnover
- Maintain high on time performance
- Preprint and route management
- QA sales and service
- Fleet management
- EHS compliance with all relevant Branch activities

**TABLE 6.1-8**

**JOB DESCRIPTION SALES AND SERVICE ASSOCIATE**

Position Title: Sales and Service Associate

Reporting Relationship: Reports to Branch Customer Service Manager

**Qualifications:**

- High school graduate
- Ability to pass CDL and other requirements
- Ability to interface with customers, and branch personnel

**Position Overview:** Perform sales and service functions with experienced personnel until ready to assume responsibilities working alone. Exhibit and maintain knowledge of hazardous waste regulations.

**Essential Job Functions and Responsibilities:**

- Service equipment at customer locations
- Develop strong customer relations
- Maintain high on time performance
- Installation/Recovery of equipment
- Level one equipment repair
- EHS compliance with all relevant activities
- Other duties as assigned by Branch Customer Service Manager

**TABLE 6.1-9**

**JOB DESCRIPTION SENIOR SALES AND SERVICE REPRESENTATIVE**

Position Title: Senior Sales and Service Representative

Reporting Relationship: Reports to Branch Customer Service Manager

**Qualifications:**

- High school graduate
- Three (3) years experience as Sales and Service Representative
- Ability to interface with customers and branch personnel

**Position Overview:** Assist Branch Customer Service Manager to ensure optimum customer service leading to retention and expansion of branch business. Exhibit and maintain knowledge of hazardous waste regulations.

**Essential Job Functions and Responsibilities:**

- Assist in recruiting, training and managing Sales and Service Reps
- Service equipment at customers locations
- Develop strong customer relations
- Maintain high branch on time performance
- Maintain low branch DSO
- Installation/Recovery of equipment
- Level one equipment repair
- EHS compliance with all relevant activities
- Other duties as assigned by the Branch Customer Service Manager

**TABLE 6.1-10**

**JOB DESCRIPTION SALES AND SERVICE REPRESENTATIVE**

Position Title: Sales and Service Representative

Reporting Relationship: Reports to Branch Customer Service Manager

**Qualifications:**

- High school graduate
- Ability to pass CDL and other requirements

**Position Overview:** Provide service at a level that meets or exceeds customer expectations while complying with all relevant regulations and Safety-Kleen policies and procedures. Exhibit and maintain knowledge of hazardous waste regulations.

**Essential Job Functions and Responsibilities:**

- Service equipment at customer locations
- Develop strong customer relations
- Maintain high branch on time performance
- Maintain low branch DSO
- Installation/Recovery of equipment
- Level one equipment repair
- EHS compliance with all relevant activities
- Other duties as assigned by the Branch Customer Service Manager

**TABLE 6.1-11**

**JOB DESCRIPTION OIL SALES AND SERVICE REPRESENTATIVE**

Position Title: Oil Sales and Service Representative

Reporting Relationship: Reports to Branch Customer Service Manager

**Qualifications:**

- High school graduate
- Ability to pass CDL and other requirements

**Position Overview:** Provide service at a level that meets or exceeds customer expectations and comply with all relevant regulations and Safety-Kleen policies and procedures. Exhibit and maintain knowledge of used oil regulations.

**Essential Job Functions and Responsibilities:**

- Develop strong customer relations and solicit new business
- Maintain high branch on time performance
- Maintain low branch DSO
- EHS compliance
- Other duties as assigned by the Branch Customer Service Manager

**TABLE 6.1-12**

**JOB DESCRIPTION VAC SALES AND SERVICE REPRESENTATIVE**

Position Title: Vac Sales and Service Representative

Reporting Relationship: Reports to Branch Customer Service Manager

**Qualifications:**

- High school graduate
- Ability to pass CDL and other requirements

**Position Overview:** Provide service at a level that meets or exceeds customer expectations and comply with all relevant regulations and Safety-Kleen policies and procedures.

**Essential Job Functions and Responsibilities:**

- Develop strong customer relations and solicit new business
- Maintain high branch on time performance
- Maintain low branch DSO
- EHS compliance
- Other duties as assigned by the Branch Customer Service Manager

**TABLE 6.1-13**

**JOB DESCRIPTION ACCOUNT MANAGER**

Position Title: Territory Account Manager

Reporting Relationship: Reports to Branch General Manager & Sales Manager

**Qualifications:**

- College degree or equivalent sales/management experience
- Proven sales/management ability
- Self motivated individual
- Excellent communication and presentation skills

**Position Overview:** Manage sales to existing customers and expanding customer base. Exhibit and maintain knowledge of hazardous waste regulations.

**Essential Job Functions and Responsibilities:**

- Growth/Quota attainment
- Establish goals and monitor sales activity
- Customer retention/Accounts receivable
- Key account management
- Comply with corporate credit policies
- Gather competitive information
- Communicate with Branch Customer Service Manager to ensure high level of customer satisfaction/retention

**TABLE 6.1-14**

**CONTINUING TRAINING TOPICS FOR BRANCH EMPLOYEES**

- Hazard Communication Safety Training
- Hazard Communication regarding SDSs
- Preventing Injury and Illness
- Hazardous Materials Regulations
- Waste Analysis Plan
- Preparedness, Prevention, and Contingency Plan
- Respirator Fit Testing, and Training
- Generator Requirements
- Hazardous Waste Paperwork – Manifests, BOL, Labeling, etc.
- Initial RCRA training & annual updates – hazardous waste permit conditions, container and storage tank regulations, used oil training, universal waste training, manifest requirements, recordkeeping, and hazardous waste determinations are included in the initial and annual RCRA training.

**Part II****A. General****5. WASTE CHARACTERISTICS**

Waste analysis requirements mandate that before an owner or operator transfers, treats, stores, or disposes of any hazardous waste, detailed chemical analysis of a representative sample of waste must be obtained. This analysis, at a minimum, must contain all of the information that must be known to transfer, treat, store, or dispose of the waste. The analysis may include data developed under 40 CFR 261 of the regulations and existing published or documented data on the hazardous waste or on hazardous waste generated from similar processes. The Waste Analysis Plan for Safety-Kleen's Sanford, FL Service Center has been developed to meet the requirements described above and as found in 40 CFR 270.14(b) and 264.13.

Permitted/Site Generated Waste Streams

Waste Type	Process Code(s)	Estimated Annual Amounts (Tons)	Waste Codes
Spent Parts Washer Solvent	S01* S02**	374	D001 and D-Codes Listed in Note Below
Branch Generated Liquids/Solids (Debris)	S01*	9	D001 and D-Codes Listed In Note Below; F002, F003, F005
Dumpster Sediment	S01*	Included Above	D001 and D-Codes Listed in Note Below
Tank Bottoms	S01*	Included Above	D001 and D-Codes Listed in Note Below
Used Immersion Cleaner (#699)	S01*	6	D-Codes Listed in Note Below
Dry Cleaning Waste (Perchloroethylene)	S01*	7	F002 and D-Codes Listed in Note Below
Dry Cleaning Waste (Naphtha-Based)	S01*	Included above	D001 and D-Codes Listed in Note Below
Paint Wastes	S01*	18	D001, F003, F005 and D-Codes Listed in Note Below
Retain Samples From Used Oil Operations	S01*	3	D008, D018, D039, D040
Spent Aerosol Cans	S01*	< 1	D001, D035
Fluid Recovery Service (FRS)	S01***	100	Transfer wastes – waste codes assigned by generator
Aqueous Brake Cleaner	S01***	14	Transfer wastes – none, unless assigned by generator
Mercury-Containing Lamps/devices	N/A***	Less than 2.2	N/A – handled as non-hazardous transfer wastes

**NOTES:**

D-Codes: D004, D005, D006, D007, D008, D009, D010, D011, D018, D019, D021, D022, D023, D024, D025, D026, D027, D028, D029, D030, D032, D033, D034, D035, D036, D037, D038, D039, D040, D041, D042, D043

\* This waste will be stored in containers in the container storage area. The maximum capacity in the container storage area for hazardous waste is 6,912 gallons.

\*\* The spent parts washer solvent storage tank has a capacity of 20,000 gallons and may be filled up to 19,000 gallons.

\*\*\* This waste will be held for transfer in containers in the transfer area(s) and designated mercury bulb storage area.

## CHEMICAL AND PHYSICAL ANALYSIS

270.14(b)(2)

264.13(a)

Used materials generated by Safety-Kleen customers are the primary feedstock for the generation of Safety-Kleen recycled solvent products. As a result, quality control of the used materials is necessary to monitor product quality and regulatory consistency. The Sanford facility collects used materials from numerous customers, many of whom are Conditionally Exempt and Small Quantity Generators (CESQGs and SQGs).

Most of the materials collected at the Service Center are managed in a closed-loop system and are collected from companies with a single process (i.e. washing oily parts, dry cleaning, or painting). The composition and quality of these materials are known, and Safety-Kleen's operating experiences have shown that the collected materials rarely deviate from company specifications.

### *Descriptions of Permitted Waste Streams*

#### *Wastes Resulting from Solvent-Based Parts Washer Service*

Used mineral spirits solvent from parts washer services at Safety-Kleen customers is accumulated in a 20,000 gallon aboveground storage tank via the Return and Fill station (R/F). Containers of used solvent are poured into a drum washer unit at the R/F which in turn empties into the tank. The appropriate waste codes will be based on Safety-Kleen's Annual Recharacterization (AR) study. This waste handling method results in three types of parts washer solvent-based waste:

1. Spent Parts Washer Solvent which may include any of Safety-Kleen's mineral spirits products, is removed from the tank by a tanker approximately every 20 working days. For appropriate waste codes, see the Table above on page 1. The Sanford facility will ship used solvent to a permitted Safety-Kleen/Clean Harbors TSDf or other facility appropriately permitted to accept the waste for reclamation. The used mineral spirits solvent removed from the bulk tank is a homogeneous material as no other waste streams are placed in the bulk tank.
2. Solvent Tank Bottoms includes sediment and other heavy material that has accumulated at bottom of the tank. Periodically it is necessary to remove this material when the accumulation impacts, or may impact the ability to pump liquid solvent from the bottom outlet of the tank. The frequency of removal of the tank bottoms varies, dependent on the amount of suspended solids in the used solvent that settle during tank storage. Bottoms are typically removed by suction/vacuum truck and transported for offsite disposal. Typically, removal may be required every three-five years. For appropriate waste codes, see the Table above on page 1.

3. Branch Generated Liquids/Solids (Debris)/Dumpster Sediment – In the course of day-to day operations, the Branch generates waste associated with sampling customers’ waste and branch activities. Such wastes may include wipes, gloves, etc. In addition, liquid wastes may be generated as a result of decontaminating sampling equipment. The dumpster sediment chemical composition is analogous to that of the solvent tank bottoms. These containers are stored in the container storage area. The facility ultimately ships these materials to a permitted Safety-Kleen/Clean Harbors TSDf or other permitted facility for disposal. This waste stream is not sampled/analyzed, a “worst case scenario” is assumed. For appropriate waste codes, see the Table above on page 1.
4. System One Type Parts Washers (recycling units) – These types of parts washers build up oil/sludge in the distillation unit of the machine. This material is not sampled/analyzed as part of SK’s annual re-characterization program, and is managed according to the customer/generator waste determination. If a generator is a CESQG SK recommends that they place this material in their used oil, if they are a generator of used oil

Immersion Cleaner (IC) is another type of parts washer solvent. This product is a heavy aromatic naptha, N-methyl-2-pyrrolidinone, dipropylene glycol methyl ether, monoethanolamine and oleic acid, and may contain a maximum of 1 percent chlorinated compounds. Containers of used IC are stored in the container storage area. The Immersion Cleaner remains in the container in which it was originally used until it is received at a permitted SK/Clean Harbors TSDf for disposal. For appropriate waste codes, see the Table above on page 1.

#### *Wastes Resulting from the Dry Cleaner Service*

Safety-Kleen manages naptha-based, and perchloroethylene-type of hazardous dry cleaner waste in the permitted areas. This waste can have three forms: bottoms, filters, and separator waters. These wastes are packaged on the customers’ premises in containers meeting U.S. DOT specifications. When received at the facility, the perchloroethylene, and naptha-based non-perchloroethylene dry cleaning containers are placed in the container storage area. Dry cleaning wastes remain in the containers received from the customer until received at the designated, permitted Safety-Kleen/Clean Harbors TSDf, or other appropriately permitted facility.

The dry cleaning process may produce three waste streams.

1. Filter Cartridges are generated as waste when they can no longer effectively filter the solvent in the chamber. In addition to the filter materials of construction consisting of steel, paper, clay, and carbon, the used cartridge retains solvent, oil and grease, lint, hair, and soil. Solvent retained in the filter cartridge generally amounts to less than 50 percent of the total cartridge weight. Dry cleaner filters are given the same waste codes as the associated dry cleaner bottoms because both streams are derived from the same source. Designating the same codes for the filters as were used for the bottoms is a conservative approach. A representative filter sample is difficult to obtain because of the make-up of the filter (metal core) and obtaining the sample would involve dismantling of the filter and undue exposure to the dismantler.

2. & 3. Still Bottom Residue and Separator Water are generated after filtration and distillation at the generator to remove the dissolved materials from the used solvent. The dissolved materials (still bottom residues) are in liquid form and consist primarily of solvent, oil, grease, hair, dirt, and water. In some cases, the dry cleaner will separate the water condensate from the still residue. Water condensate, generated during the distillation process, may contain dry cleaning solvent, oil, grease, and dirt as well. The dry cleaning separator water will be given the same waste codes as the associated bottoms with the omission of D007 because chromium is not expected to carry over into the separator water during the distillation process (i.e., the boiling point of chromium is much greater than the operating temperature of the distillation unit).

For appropriate waste codes, see the Table above on page 1.

### *Wastes Resulting from Paint and Thinner Service*

Paint wastes consist Safety-Kleen lacquer thinner and paint residues resulting from cleaning of the paint guns by the generator. There are primarily three waste streams from this service: Paint Gun Cleaner, Clear Choice® Paint Gun Cleaner, and paint waste-other. Safety-Kleen thinners are used during the generation of the first two waste streams.

1. Paint Gun Cleaner is a paint gun cleaning lacquer thinner containing a blend of solvents such as acetone, alcohols, ketones, toluene, xylene, and acetate compounds. These have primary waste codes of D001, F003 and F005. These are contaminated with lower levels of waste paint, as the gun cleaning machine is removing it from the paint sprayer during the cleaning operation. Safety-Kleen's core paint waste is typically recycled and fuel blended. Reference the table on page 1 for other applicable waste codes.
2. Clear Choice Paint Gun Cleaner is acetone, so the F005 waste code does not apply to this waste stream. Other applicable waste codes are D001 and F003. The two Paint Gun Cleaner streams share the same AR data because the waste streams are similar due to the identical process generating the wastes. Reference the table on page 1 for other applicable waste codes.
3. Paint Waste Other consists of the same material as the Paint Gun Cleaner, but has a higher level of paint solids, as this comes from the dumping of left over paint from paint cups and guns when all the paint in a paint gun is not used. During the process creating this waste, typically smaller volumes of thinner are in the waste so these drums are fuel blended or incinerated rather than recycled for their solvent value. The primary waste codes are D001, F003 and F005. Reference the table on page 1 for other applicable waste codes.

The paint wastes described above are collected in containers meeting U.S. DOT specifications. The wastes are containerized by the generator at their place of business. The waste remains in the containers, and is stored in the container storage area, until it is received permitted Safety-Kleen/Clean Harbors TSDf, or other properly permitted facility for disposal.

***Site Generated Retain Samples from Used Oil Operations***

Used Oil/Oily Water Retain Samples are taken and maintained for every used oil/oily water service SK performs. This is to ensure that we can identify any customers who introduce contaminants (halogenated solvents or PCBs) into our used oil/oily water loads. At the time the retain sample is taken at the customer location, the driver is able to check the material for appearance (used oil mixed with fuels may cause the material to have a thinner/lighter appearance), unusual odors, and viscosity (used oil mixed with fuels would have a noticeably lower viscosity and flow more easily into the sample jar). These retain samples are kept for a minimum of 90 days and then disposed of as hazardous waste. The samples are typically 4-oz. plastic/glass jars. They are manually placed into 55-gallon drums, and properly labeled for disposal. These containers are stored in the container storage area until being sent to a permitted Safety-Kleen/Clean Harbors TSDf, or other properly permitted facility for disposal. Waste codes for this material are found in the table on page 1.

***Site Generated Spent Aerosol Cans***

Spent Aerosol Cans: From time to time the facility generates spent aerosol cans during operations. These cans are accumulated in a satellite accumulation container (30, or 55 gallon) at the facility. Once this container is full it is moved to the container storage area until being sent to a permitted Safety-Kleen/Clean Harbors TSDf, or other properly permitted facility for disposal. Waste codes for this material are found in the table on page 1.

***Used Antifreeze***

The spent antifreeze (ethylene glycol) is collected from automobile service stations. All antifreeze collected and managed by Safety-Kleen within Florida is recycled. At the customer's location, Safety-Kleen pumps waste ethylene glycol (antifreeze) into a Safety-Kleen used oil tanker truck. This truck transports the used antifreeze (glycol) to the Sanford branch, for off-loading into an above-ground tank for storage. The material is then shipped to an internal, or third party recycler, to extract the ethylene glycol for additional purification into a pure product and sold on the open market. This procedure is in accordance with FDEP's *the Best Management Practices for Managing Used Antifreeze at Vehicle Repair Facilities*, dated May 22, 2012. In addition, Safety-Kleen sells its' own private label antifreeze in 55-gallon containers. Customers will then place used antifreeze in these containers to be shipped back to the branch. This material is shipped to SK distribution centers, and then shipped to 3<sup>rd</sup> party recyclers

### *Aqueous Brake Cleaner*

The Aqueous Brake Cleaner (ABC) is an aqueous, alkaline concentrated cleaner diluted with water (4¾ gallons of water is mixed with ¼-gallon of concentrated aqueous cleaner). The ABC parts cleaner has a 5-gallon reservoir under the cleaning vat that provides the aqueous solution for cleaning. The spent ABC is transported from the customers in 5-gallon suitcase type containers. Spent aqueous brake cleaner that is non-hazardous is sent to a waste water treatment facility for processing. If a customer (generator) assigns any hazardous waste code to the spent ABC, the material is managed as a 10-day transfer waste and sent to an appropriate Safety-Kleen/Clean Harbors TSDf for processing.

### *Fluid Recovery Services (FRS) 10-Day Transfer Wastes*

Fluid Recovery Services (FRS) is a program managed by the Safety-Kleen Branch to collect and transfer various other hazardous wastes to the appropriate Safety-Kleen/Clean Harbors TSDf's for processing. Non-hazardous Containerized Waste Services (CWS) are also performed under this program. FRS wastes that are RCRA hazardous wastes are managed as 10-day transfer wastes. Examples of types of wastes that may be received under this program include:

- Spent hydrocarbon distillates, such as waste fuel, oil, petroleum-naptha, etc.;
- Lubricating oils, hydraulic oils, synthetic oils, and machine oils, used antifreeze;
- Industrial halogenated solvents such as 1,1,1-trichloroethane, tetrachloroethylene, Freon, and trichloroethane;
- Photographic and x-ray related wastes;
- Paint and lacquer thinners;
- Acids;
- Other hazardous and non-hazardous halogenated and non-halogenated wastes.

### ***Mercury-Containing Lamps and Devices & Batteries***

Mercury-containing lamps and devices are another type of waste handled by the Branch. All mercury-containing lamps/devices are managed in accordance with the Standards for Universal Waste Management found in 40 CFR Part 273. As part of its protocol for handling mercury-containing lamps and devices, the Branch provides customers with four-foot and eight-foot boxes which hold up to 39 lamps. The boxes are picked up at customer locations and are stored at the Branch in a designated area within the waste storage area (Figure 8-1). These containers are labeled in accordance with 62-737.400 (5)(b), Florida Administrative Code (FAC). The boxes are periodically shipped to a permitted mercury recovery or reclamation facility.

Safety-Kleen handles all types of batteries with the exception of lithium batteries. All applicable batteries, per 40 CFR Part 273.2 & 273.9, are managed in accordance with the Standards For Universal Waste Management found in 40 CFR Part 273. Batteries not meeting those standards may be managed as 10-day transfer waste.

#### ***270.15(b)(1) Waste Compatibility With Containers 264.172***

It is Safety-Kleen's standard operating procedure to use containers made of, or lined with, materials that will not react with, and are otherwise compatible with, the hazardous waste to be stored so that the ability of the container to contain the waste is not impaired.

Safety-Kleen manages a limited number of waste streams, most are liquid, and most originate from new products that are supplied to its customers in the original DOT approved drums. Safety-Kleen has evaluated the chemical composition of these products and wastes and has determined that the wastes are compatible with the containers in which they are stored.

Note: None of the permitted waste streams carry the D002 waste code for corrosivity. In most cases where a container is not available from a Safety-Kleen-supplied product, Safety-Kleen supplies the customer with a DOT approved drum for that waste type (e.g. when Safety-Kleen collects Dry Cleaning filters).

#### ***270.16(a), 264.190(a), Waste Compatibility With Tank System 264.191(b)(2), 264.192(a)(2)***

The only waste stored in the aboveground storage tank is used parts washer solvent. This material has been analyzed and found to be compatible with the steel tank in which it is stored.

#### ***Waste in Piles Wastes on Drip Pads***

Safety-Kleen's Sanford facility does not have any of these processes on site. Therefore these sections do not apply.

270.14(b)(3)  
264.13(b)-(c)

**Waste Analysis Plan**

Waste analysis at the Safety-Kleen Sanford Service Center is a three-step process that includes:

- Prescreening of customers
- Qualitative/visual analysis and
- Quantitative analysis (lab analysis)

**Prescreening of Customers**

Safety-Kleen performs a customer prescreening for all parts washer and immersion cleaner service customers. The other permitted waste streams (dry cleaning wastes and paint wastes) are generated from facilities where there is typically one process generating hazardous waste and the possibility of cross-contamination from other chemicals or wastes is minimal. These wastes remain in the container they were originally packaged until received at a permitted Safety-Kleen/Clean Harbors TSDF, or other properly permitted disposal facility. These waste containers remain closed from customer to final disposition.

Prior to leasing a SK parts cleaning machine, or placing a Customer Owned Machine (COM) service, the customer's business is reviewed. Where the possibility exists for contamination of the parts cleaner solvent (e.g. pesticide, herbicide, or pharmaceutical operations), operations are reviewed to ensure that the solvent is protected from the sources of contamination. In reviewing a customer's business, the Safety-Kleen Representative provides customers with written and verbal information on use of the equipment. This information will contain at a minimum:

- Proper usage and management of the unit
- Information on the reasons to not add materials to the unit, and
- Examples of what not to add to the unit

**Qualitative/Visual Analysis**

Safety-Kleen conducts qualitative/visual analysis as a part of all parts washer and immersion cleaner services. Qualitative/visual analysis is not conducted on the dry cleaning and paint waste streams as these containers are not opened by the Safety-Kleen service representative and the likelihood of contamination is remote. Safety-Kleen representatives are instructed to visually examine the used solvent (parts washer and immersion cleaner) for each waste pickup when the machines are serviced, noting the quantity, odor, and appearance of the material recovered as follows:

1. The quantity of used solvent in the drum – When the amount of parts cleaner solvent or immersion cleaner fluid is more than 10% greater than originally supplied, the container will not be accepted. Contingent on the customer's responses to Safety-Kleen's inquiry regarding the customer's operation and handling practices, the solvent is accepted or left with the customer until an analysis is completed to determine its acceptability.
2. The odor of the liquid in the container – Personnel must never make an effort to "sniff"

the solvent. However, if in the normal course of servicing the customer, the odor of the fluid in the container is noticed to be different from that of parts cleaner solvent or immersion cleaner, the container will not be accepted. Contingent on the customer's responses to Safety-Kleen's inquiry of the customer's operation and handling practices, the solvent is accepted or left with the customer until an analysis is completed to determine its acceptability.

3. The appearance of the liquid in the drum – The used parts cleaner solvents have a normally brown or black appearance. Certain contaminants containing dyes and color pigments (such as transmission fluid, soy-based printers' ink, and water-based paints) may change the color of the used parts cleaner solvent to other colors. Used immersion cleaner should have a dark brown to almost black appearance. Unused immersion cleaner is amber in color. As the solvent is used, the darker it becomes. Therefore, if the spent immersion cleaner does not appear to be amber, brown, or black, the service representative will not accept the container. Safety-Kleen will inquire with the customer regarding operation and handling practices of the material. Based on the response from the customer, Safety-Kleen will either accept the container, or reject until analysis has been completed.

If the material passes the three qualitative/visual analyses shown above the material is noted as having passed the qualitative analysis in our service document (typically a handheld computer printout).

As indicated in each of the qualitative/visual analysis, if the answer to the inquiry to why the test (quantity, odor and appearance) were not acceptable, the material is left behind for further testing. An Account Sales Manager will return to the site to sample the material should the generator request Safety-Kleen to assist in managing the material. The sample will be sent to a third party certified laboratory for testing. A Waste Material Profile Sheet will be completed and once approved the waste will be managed as containerized transfer waste for disposal. At the Service Center, the Safety-Kleen Representative or Material Handler again observes the quantity, odor, and appearance prior to emptying the parts washer solvent into the drum washer unit. If a container with questionable contents is returned to the facility, a sample will be taken and analysis performed. The container will be held at the facility pending completion of analysis. If analysis indicates the waste to be different than what was manifested to the facility, it will be returned to the generator, or managed at the facility in accordance with the generators direction. Records of all sampled and/or rejected wastes will be kept on file at the Sanford branch.

In addition, receipt analysis is performed by the Safety-Kleen Recycle Centers on all inbound bulk solvent waste deliveries. Receipt analysis typically includes a screen for atypical flash point, Polychlorinated Biphenyls (PCBs), and halogenated organics.

#### **Quantitative Analysis (Lab Analysis)**

After 50 years of servicing over 250,000 parts washer customers each year, Safety-Kleen has determined that the wastes generated by its customers are relatively homogeneous. The homogeneity of these wastes is evaluated annually through the Safety-Kleen AR process (Quantitative Analysis).

*Revision 0 – 11/10/18*

Analytical data from the Annual Re-characterization sampling is subjected to an EPA SW846 approved statistical model (Exhibit C-1). The waste samples analyzed come from a variety of Safety-Kleen facilities across the country and is representative of the facility.

Samples included in the AR process are selected from random customers serviced by Safety-Kleen facilities. Randomness is overseen by the Safety-Kleen Technical Center, which manages the AR program, selecting the month that the samples will be taken. A list of waste streams included in the AR is found below on page 11. The analytical results of the AR are communicated to customers to assist them in making a waste determination, while they also consider their specific generation process. In the case parts washer solvent, if a customer determines specific waste codes apply to their spent parts washer solvent then these codes will be used when servicing the parts washers. Generator services are typically scheduled months in advance and those clients whose waste happens to be on hand on the month selected by the Technical Center will be the wastes that will be sampled. See Exhibit C-2 for sampling locations from 2017.

The waste streams collected by Safety-Kleen are uniform across business types and geographical locations. This is demonstrated by the minimal changes in the codes assigned to each stream through the AR statistical evaluation each year via the Non-parametric Upper Confidence Interval Approach. If waste code(s) are removed from any of the waste streams evaluated by the AR program, and SK has a current, or potential, customer generating this waste stream that they believe include the removed waste code(s), the customer may complete a separate waste profile based on process knowledge, or TCLP analytical data, and the waste may be managed as a 10-day transfer material.

When subjecting AR sample data to the Non-parametric Upper Confidence Interval Approach, the last 3 years of analytical data for a given waste stream is used from samples pulled from across the country (in most cases). For example, statistically based waste codes assigned to a particular core waste stream in 2018 are based on samples analyzed in 2015, 2016, and 2017. Ideally 50 data points are used but at least 30 data points are required. If 30 data points are not available from samples pulled in 2015/2016/2017, samples from 2014 will also be incorporated into the population.

In reviewing with Dr. Gibbons how the number of data points was derived he wrote in a recent email ... *“This is a nonparametric upper confidence limit (see Gibbons, Bhaumik and Aryal, 2010 section 18.7) which is defined by an order statistic (i.e. a rank) of the data. There is nothing magical about 30 or 50, but 50 is good because the median is the average of the 25<sup>th</sup> and 26<sup>th</sup> highest values and the UCL is the 31<sup>st</sup> largest value, which provides a reasonably tight confidence limit (i.e. not an extreme value).”*

Homogeneity of the streams was further confirmed in 2004 when Safety-Kleen conducted an Annual Re-characterization using California-only customer data. Safety-Kleen conducted a statistical comparison of the ‘California only’ Annual Re-characterization result with the results from the National AR (Exhibit C-3). Note the conclusion that California customer wastes are no different than the streams generated by Safety-Kleen customers in the rest of the country.

The waste streams included in the Safety-Kleen AR process are by their nature consistent and predictable. The process includes streams generated by Safety-Kleen customers and terminated as permitted streams at Safety-Kleen facilities as well as streams generated by Safety-Kleen facilities.

Waste streams included in the Re-characterization process for 2017 (for 2018 waste codes) were:

CUSTOMER GENERATED	SAFETY-KLEEN GENERATED
Immersion Cleaner	Bulk Solvent
Parts Washer Solvent Premium	Dumpster Sludge
Paint Gun Cleaner/Paint Wastes/Clear Choice	Tank Bottoms
Dry Cleaner (Perc/naptha-based)	

AR Sample Testing Protocol is located in Exhibit C-4. Procedures used for obtaining the samples is included in Exhibit C-5. Final AR (National) Waste Code Assignments are included in Appendix B. A copy of Safety-Kleen's current Annual Re-characterization Data is included in Appendix B. All AR Samples are analyzed by a single lab, currently Test America (Pittsburgh, PA), an independent NELAP accredited environmental laboratory:

Test America-Pittsburgh  
301 Alpha Drive  
Pittsburgh, PA 15238

### **Waste Determination for Subpart BB and CC Compliance**

For purposes of waste determination, this facility utilizes knowledge of the wastes described in this section. The used solvent managed in the tank system is presumed to contain hazardous waste with an organic concentration of at least 10-percent by weight, so Subpart BB regulations apply. For those hazardous wastes that are managed on a transfer basis, the Subpart CC regulation does not apply. However, the owner/operator may use knowledge of the waste based on information included in manifests, shipping papers or waste certification notices to confirm waste determination for the generator or the ultimate receiving facility.

Based upon this knowledge, it has been determined that most waste solvents managed in tanks and containers at this facility may display an average volatile organic concentration of greater than 500 ppm at the point of waste origination. Therefore, no exemption allowed in 40 CFR 264.13b(8) from Subpart CC regulations is requested and hazardous wastes managed in tanks and containers at this facility shall be managed in accordance with applicable Subpart CC standards.

270.14(b)(3),  
264.13(b)(1)

**Parameters and Rationale**

Safety-Kleen's permitted waste streams which are all received in containers are broken into four types:

- Used Parts Washer
- Solvent Immersion Cleaner
- Paint Waste
- Dry Cleaner-Perchloroethylene/Naptha

The product provided, or in the case of dry cleaner solvents that are purchased by the generator, makes up the majority of the waste. As such the analytical testing includes the regulated constituents in these products and the regulated metals and volatile solvents that may come in contact with the products. This, combined with a known process that the waste streams are being derived from, form the basis for testing.

The purpose of the Re-characterization is to determine the waste codes applicable to core waste streams managed and generated by Safety-Kleen facilities. As such, a waste stream may be excluded from Re-characterization once it has consistently been designated as non-hazardous. A stream may also be excluded from Re-characterization when it has been determined that the codes assigned to the stream are stable and marginal changes in trace constituents will not affect the management of the stream. Lastly, a set of analytes may be omitted if they are not expected or are demonstrated to not be present in a waste stream. Pesticides and herbicides have never been included in the Re-characterization process as these constituents are not allowed in wastes picked up by Safety-Kleen. Analysis for semi-volatiles is in the process of being phased out as codes for semi-volatiles have never been assigned.

270.14(b)(3);  
264.13(b)(2)

**Test Methods**

Exhibit C-4 details the AR sample testing protocol.

270.14(b)(3);  
264.13(b)(3)

**Sampling Methods**

AR Sampling Method Requirements are found in Exhibit C-5.

270.14(b)(3);  
264.13(b)(4)

**Frequency of Analysis**

As described previously, a Qualitative/Visual analysis of the parts washer wastes managed at the Service Center is conducted for each waste pickup. Safety-Kleen's Re-characterization is conducted annually.

**270.14(b)(3);**                    ***Additional Requirements for Wastes Generated Off-Site***  
**264.13(b)(5)(c)**

Generators are informed of the results of the AR each year. No action is required by the generator if they agree to the waste code(s). However, if a generator chooses to use knowledge of its process to identify which waste codes are attached to the waste, approval by Safety-Kleen's Central Waste Profiling group is required. In most cases, laboratory analytical data will be required to remove codes determined by the AR process. If additional waste codes are identified by the generator, Safety-Kleen will set up a specific profile for that generator's waste stream identifying those waste codes provided.

**270.14(b)(3);**                    ***Additional Requirements for Ignitable, Reactive, or Incompatible***  
**264.13(b)(6)(c); 264.17**    ***Wastes***

Waste received at the facility is analyzed according to the procedures described in the Waste Analysis Plan. All ignitable wastes terminated at the facility are compatible with each other and the containers in which they are stored. Therefore, additional analyses to evaluate compatibility are not necessary.

The permitted storage warehouses where ignitable waste is stored are designed for this material. The Container Area is constructed with four hour fire walls, and the roll-up door between the return/fill station and container storage area will close in the case of a fire. All electric components in the Return and Fill area are intrinsically safe. Hot work permits are required for any work that may involve excess heat, sparks or open flames in these storage areas and are conducted only when ignitable materials are not present. No Smoking signs are posted in all areas where ignitable waste is stored and smoking is not allowed within the office, warehouse or fenced areas of the facility.

The only permitted waste opened at the facility is the used parts washer solvent waste, which is consolidated in the aboveground waste storage tank. No other waste streams are added to the tank.

**270.14(b)(3); 264.13;**        ***Waste Analysis Requirements Pertaining to Land Disposal Restrictions***  
**Part 268**

All of the permitted waste streams received and stored at the Sanford facility are treated or recycled at an approved Safety-Kleen/Clean Harbors TSDF, contract reclaimer, or other properly permitted facility. The drum washer sediment generated at the facility is containerized and shipped offsite for reclamation. The Service Center does not dispose of any hazardous wastes onsite and does not send any permitted wastes to land disposal facilities. Therefore, the Sanford Service Center is not required to certify that hazardous wastes that are restricted from land disposal are below treatment standards. The following sections discuss how Safety-Kleen determines appropriate Land Disposal Restriction (LDR) classification and treatment standards and how LDR notification requirements are met.

270.14(a); 264.13(a)(1); *Waste Analysis*  
268.1; 268.7; 268.9;  
268.32- 268.37; 268.41 -  
268.43

Due to the nature of its business, Safety-Kleen receives wastes that are untreated and that are assumed to exceed the LDR treatment standards. For the Safety-Kleen parts washer solvent, immersion cleaner, dry cleaner wastes and paint wastes, the hazardous constituents are known. The rationale for the selection of LDR treatment standards are provided below.

270.14(a); 264.13(a)(1); *Spent Solvent and Dioxin-Containing Waste*  
268.2(d); 268.2(f); 268.7;  
268.30; 268.31

Safety-Kleen will manage F-solvent wastes. The spent dry cleaning perchloroethylene is F-Solvent non-wastewater waste with the following treatment standard: tetrachloroethylene (6.0 mg/kg). The perchloroethylene treatment standard for wastewaters is 0.056 mg/l. None of the permitted wastes Safety-Kleen handles contain dioxins.

270.14(a); 264.13(a)(1); *California List Wastes*  
268.7; 268.32; 268.42(a)

California list wastes are a distinct category of RCRA hazardous wastes that are restricted under the land disposal restrictions (LDRs). These restrictions only apply to liquid wastes, with the exception of Halogenated Organic Compounds (HOCs), which may be liquid or non-liquid. In Safety-Kleen's case, all of our permitted waste streams are liquid, with the possible exception of the Dry Cleaning Filters, which can be dry although they may have low levels of free liquids at times. In either case the California List Waste rules apply as the Perc Filters contain HOCs. The Safety-Kleen permitted waste streams do not contain PCBs over 50 ppm, free cyanides >1000 mg/l, nor do they have a pH of <2, so these categories do not apply.

Safety-Kleen permitted wastes are either recycled, fuel blended or incinerated. If any of the residues are landfilled, the prohibition levels for the California listed metals and HOC's will apply. Should liquid residues be landfilled they will have less than the metal prohibition limits prior to land disposal, and liquids and non-liquids will have less 1000 mg/kg of HOCs.

270.14(a); 264.13(a)(1); *Listed Wastes*  
268.7; 268.33 - 268.36;  
268.41 -268.43

Safety-Kleen does not handle non-solvent F-listed, K-listed, or P-listed waste in its permitted areas. Any transfer waste having these codes will have the appropriate LDR paperwork accompany the manifest so the designated facility can treat the material appropriately.

**270.14(a); 264.13(a)(1); Characteristic Wastes**  
**268.7; 268.9; Part 268,**  
**Appendix I, IX**

Wastes with treatment Standards – Safety-Kleen may generate or store D001 wastes, including parts washer solvent. Since this waste contains high levels of organics, Safety-Kleen assumes that all D001 wastes will contain  $\geq 10$  percent total organic carbon (TOC). The technology-based standards for these non-wastewaters are “RORGS”, (recovery of organics) or CMBST (high temperature organic destruction).

Safety-Kleen may also generate or store wastes that may be classified as D006, D007 (example: immersion cleaner, dry cleaner waste). The non-wastewater treatment standards for land disposal of these wastes are 0.11 mg/L TCLP, and 0.60 mg/L TCLP respectively. The wastewaters treatment standards for D006 (cadmium) and D007 (chromium) are 0.69 mg/l, and 2.77 mg/l respectively.

**270.14(a); 268.3 Dilution and Aggregation of Wastes**

Safety-Kleen’s parts washer solvent is the only permitted waste consolidated at the site. All solvent is either recycled or destroyed via combustion; so this section does not apply.

**270.14(a); 264.13; Notification, Certification, and Recordkeeping Requirement**  
**264.73; 268.7;**  
**268.9(d)**

For all waste streams terminated at this facility, in accordance with the regulations listed above Safety-Kleen will provide to the TSDFs, or authorized treatment/disposal facility, and require from its’ regulated customers, notification/certification which provided the treatment standards for the wastes banned from landfills. These will be updated any time the waste should change or the waste is delivered to a new final permitted site. A copy of this notification/certification shall be available (via electronic storage) at the Sanford facility.

**270.14(a); 264.13; Notification, Certification, and Recordkeeping Requirement**  
**268.7(a)**

The notice is required paperwork for all Safety-Kleen permitted waste types. The notices and certifications provided by regulated customers must be reviewed for correctness and be kept on file (electronically) at the Service Center for at least three years as part of the operating record.

**270.14(a); 264.13; Notification and Certification Requirements for Treatment Facilities**  
**268.7(b)**

This facility is not a treatment facility. Therefore, this section does not apply.

**270.14(a); 264.13; Notification and Certification Requirements for Land Disposal Facilities  
268.7(b)**

This facility is not a land disposal facility. Therefore, this section does not apply.

**270.14(a); 264.13; Wastes Shipped to Subtitle C Facilities  
268.7(a)-(b)(6)**

All of Safety-Kleen Sanford Branch permitted wastes are shipped to a RCRA Subtitle C permitted facility.

**270.14(a); 264.13; Wastes Shipped to Subtitle D Facilities  
268.7(d); 289.9(d)**

None of Safety-Kleen Sanford permitted wastes are shipped to a Subtitle D facility. Therefore, this section does not apply.

**270.14(a); 264.13; Recyclable Materials  
268.7(b)(6)**

Safety-Kleen Sanford permitted wastes are not shipped as recyclable materials used in a manner constituting disposal subject to the provisions of 40 CFR 266.20(b). Therefore, this section does not apply.

**270.14(a); 264.13; Recordkeeping  
264.73; 268.7(a)  
(5),(a)(6),(a)(7), (d)**

Safety-Kleen Sanford does no recycling onsite. Therefore, this section does not apply.

**270.14(a); 264.73; Requirement Pertaining to the Storage of Restricted Wastes  
268.50  
270.14(a); 264.73; Restricted Wastes Stored in Containers  
268.50(a)(2)(i)  
270.14(a); 264.73; Restricted Wastes Stored in Tanks  
268.50(a)(2)(ii)**

Safety-Kleen Sanford stores restricted wastes in tanks and containers solely for accumulation of such quantities of hazardous waste as necessary to facilitate proper recovery, treatment, or disposal. Containers are marked with their contents and the accumulation start date. Tanks are marked with their contents and the waste movements are maintained in the operating record. The facility complies with the requirements in 40 CFR 262.34 and part 264 as wastes are stored for no more than one year, typically much less.

**270.14(a); 264.73; Storage of Liquid PCB Wastes  
268.50(f)**

Safety-Kleen Sanford does not store liquid PCB waste on site. Therefore, this section does not apply.

**270.14(b)(21); Exemption From Prohibition  
268.6**

Safety-Kleen Sanford does not seek an exemption to this prohibition. Therefore, this section does not apply.

**270.14(a); 264.73; Variance From a Treatment Standard  
268.7; 268.44**

Safety-Kleen Sanford does not seek an exemption to a treatment standard. Therefore, this section does not apply.

<b>270.14(a); 264.13(b)(7); 268.4; 267.14</b>	<b>Requirements for Surface Impoundments Exempted from Land Disposal Restrictions</b>
<b>270.14(a); 267.13; 268.14</b>	<b>Exemption for Newly Identified or Listed Wastes</b>
<b>270.14(a); 264.13;</b>	<b>Treatment of Wastes</b>
<b>268.4(a)(1)(b)</b>	
<b>270.14(a); 264.13(b)(6); 268.4(a)(2)(i),(iv)</b>	<b>Sampling and Testing</b>
<b>270.14(a); 264.13(b)(7)(iii); 268.4(a)(2)(ii)</b>	<b>Annual Removal of Wastes</b>
<b>270.14(a); 264.13;</b>	<b>Design Requirements</b>
<b>268.270.14(a); 268.4(a)(3),(4)(b)</b>	

Safety-Kleen Sanford does not have a surface impoundment. Therefore, these sections do not apply.

A-7.

***Manifest System, Record Keeping***

***Waste Manifests***

Appropriate shipping papers/manifests are used, based on the monthly quantity of hazardous waste generated by the customer. Safety-Kleen services all three categories of generators in Florida – Conditionally Exempt Small Quantity Generators (CESQGs), SQGs, and LQGs. CESQGs' spent solvent is removed via a service document and no manifest or Land Disposal Restrictions (LDR) form is required. Appropriate records are kept at the Branch as to the date of waste pick-up, quantity, and other data on the service document. An LDR form is completed for each SQG. LQGs' spent solvent is always manifested (if hazardous) and an LDR form completed.

Spent solvent (from each Safety-Kleen customer, regardless of generator status) is brought back to the Branch and dumped in the return/fill station and pumped to the waste solvent tank. This tank contains the spent solvent of many customers and is hazardous. The contents are regularly sent via tanker truck to the recycle center in Lexington, SC. These loads are always manifested and accompanied by a LDR form. Shipments of parts washer solvent dumpster mud are also manifested accordingly. Required records are kept at the Branch and the recycle center in accordance with regulatory timeframes.

In accordance with 40 CFR 264.71 through 77, Safety-Kleen will ensure that:

1. Customers who are required to provide a manifest do so;
2. The manifests are prepared and signed properly; and
3. Copies are distributed and kept on file, as required.

In addition, discrepancies must be remediated in accordance with 40 CFR 264.72 and un-manifested wastes will be reported as described under 40 CFR 264.76.

***Required Notices***

If Safety-Kleen arranges to receive hazardous waste from a foreign source, the Regional Administrator must be notified in writing at least four weeks in advance of the date the waste is expected to arrive at the facility. Notice of subsequent shipments of the same waste from the same foreign source is not required. Safety-Kleen informs its customers in writing (i.e., on each service document) that the facility has the appropriate permit(s) for, and will accept the waste the generator is shipping. Safety-Kleen keeps a copy of this written notice as part of the operating record.

Before transferring ownership or operation of this facility during its operating life, Safety-Kleen will notify the new owner or operator in writing of the requirements of Part 264 and Part 270 of Chapter 40 in the Code of Federal Regulations.

Biennial reports required by Chapter 62-730.180(4) FAC, will be prepared and submitted by Safety-Kleen, and these records will also be available at the facility for review. The biennial report will be submitted to the Regional Administrator and/or FDEP by March 1 during each even year (1990 being the first year) on EPA form 8700-13B. The report will cover facility activities during the previous calendar years and will include:

- The EPA identification number, and address of the facility;
- The calendar years covered by the report;
- The method of treatment, storage, and disposal for each hazardous waste; and
- A certification signed by the owner or operator of the facility or the authorized representative.

### ***Operating Record***

An operating record which contains the information required under 40 CFR 264.73 is maintained and all records and logs are available at the facility, in accordance with 40 CFR 264.74. A copy (paper) of the operating record is retained at the facility to comply with 40 CFR 264.73(b).

The following information will be maintained in writing in the operation record for the facility:

- A description and quantity of each hazardous waste received;
- The date and storage method for such hazardous waste;
- The location of each hazardous waste stored within the facility;
- Records and results of waste analyses performed;
- Summary reports and details of all incidents that require implementation of the contingency plan;
- Monitoring, testing, or analytical data, and corrective action where required by Subpart F and other applicable sections of 40 CFR 264;
- All closure cost estimates under 40 CFR 264.142 and all contingent post-closure cost estimates under 40 CFR 264.144;
- Records of quantities and date of placement for each shipment of hazardous waste placed in land disposal units under an extension to the effective date of any land disposal restriction granted; and
- For any restricted waste generated that can be land disposed without further treatment, and is sent to a land disposal facility, a notice and certification will be sent to the treatment, storage, or land disposal facility with the waste. The notice will state that the waste meets the applicable treatment standards set forth in Subpart D of 40 CFR 268 and applicable prohibitions set forth in 40 CFR 268.32 or RCRA section 3004(d). The notice will include the following information:

1. EPA Hazardous Waste Number; and
  2. The corresponding treatment standards and all applicable prohibitions set forth in 40 CFR 268.32 or RCRA Section 3004(d).
- Training records, inspection reports, waste minimization certifications, closure plan, and Corrective Action Documents.

Further, the LDR certification will be signed by an authorized representative and will state the following:

*I certify under penalty of law that I personally have examined and am familiar with the waste through analysis and testing or through knowledge of the waste to support this certification that the waste complies with the treatment standards specified in 40 CFR Part 268 Subpart D and all applicable prohibitions set forth in 40 CFR 268.32 or RCRA Section 3004(d). I believe that the information I submitted is true, accurate, and complete. I am aware that there are significant penalties for submitting a false certification, including the possibility of a fine and imprisonment.*

Section 264.74 requires that all records, including plans, must be furnished upon request to duly designated representative of the Regional Administrator, and this requirement will be honored. A copy of all records of waste disposal locations and quantities will be submitted to the Regional Administrator and/or FDEP upon closure of the facility, if applicable.

As a registered transporter and storage facility for mercury-containing lamps and devices destined for recycling, the Branch complies with the record keeping requirements of FAC 62-737.

#### ***Land Ban Notification/Certification Forms***

In accordance with 40 CFR 268.7, Safety-Kleen will provide notification/certification for wastes banned from landfills as follows:

1. Special forms for each regularly handled wastes types (e.g., parts washer solvent, immersion cleaner, and percholoroethylene); or
2. A general form that must be completed for unique or nonstandard waste streams.

The notice is required paperwork for the streams handled by Safety-Kleen. When a shipment with the notice is received, the notice is kept in the files of the receiving facility with the manifest or with the pre-print if a manifest is not used.

The facility will comply with the RCRA permitting conditions found in 40 CFR Part 270.30(l)(1), 270.30(l)(2), and 270.30(l)(6). The facility will comply with the record keeping requirements found in 40 CFR Part 264.1064 and 264.1089.

***Part II. General***

***A-8***

The Federal laws found in 40 CFR Part 270.3 do apply to Safety-Kleen although they do not appear to be applicable at this time.

## Exhibit C-1

### Statistical Model (Gibbons)

# Statistical Analysis of Annual Waste Characterization Data

Prepared by  
Robert D. Gibbons Ph.D.

for

Safety Kleen  
July 23, 1998

## 1 Introduction

Since 1990, Safety-Kleen has undertaken a major analytical study each year to document the contaminants in some of its most common waste streams to determine which TCLP waste codes should appear on the manifest for that waste. This Annual Waste Recharacterization Program is both expensive and extensive. Upon review, it appeared that regulatory agency instructions for how to interpret the data might not have been in line with current policy, as reflected in SW846. The general approach is based on development of an upper 90% confidence limit<sup>1</sup> for the true concentration of each constituent, which can in turn be directly compared to regulatory standards to determine if the waste code should or should not be added to a particular waste stream (e.g., Premium Gold Parts Washer Solvent 150). The regulatory basis for this type of comparison stems from U.S. EPA SW846 Chapter 9 (September 1986) guidance on determining if a waste stream is hazardous.<sup>2</sup> The primary complicating feature is the presence of large numbers of nondetects which raises serious question regarding the use of the parametric approach. In light of this concern, nonparametric methods are used throughout.<sup>3</sup> Specifically, following U.S. EPA SW846, we construct a nonparametric 90% upper confidence limit (UCL) for the 50<sup>th</sup> percentile of the distribution (i.e., median), which is equivalent to the 90% UCL for the mean in the case of a symmetric distribution such as the normal distribution.

<sup>1</sup>"Consequently, the CI employed to evaluate solid wastes is, for all practical purposes, a 90% interval." U.S. EPA SW846 (1986) chapter 9 page 6.

<sup>2</sup>"The upper limit of the CI for  $\mu$  is compared with the applicable regulatory threshold (RT) to determine if a solid waste contains the variable (chemical contaminant) of concern at a hazardous level. The contaminant of concern is not considered to be present in the waste at a hazardous level if the upper limit of the CI is less than the applicable RT. Otherwise the opposite conclusion is reached. "U.S. EPA SW846 (1986) chapter 9 page 3

<sup>3</sup>"If the data do not adequately follow the normal distribution even after logarithm transformation, a nonparametric confidence interval can be constructed. This interval is for the median concentration (which equals the mean if the distribution is symmetric)." U.S. EPA Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities, April 1989, page 6-8

## 2 Method

Following Chapter 9 of SW846, the 90% UCL for the mean concentration obtained from a series of  $n$  representative samples is to be compared to the appropriate regulatory standard to determine if the waste stream is hazardous. If the UCL exceeds the standard, the waste stream is considered hazardous. The applicant must compute the UCL that is appropriate for the specific distributional form of the data. Given the large number of nondetects for many of the constituents, it is difficult if not impossible to clearly identify the underlying distributional form of the data. In this case, the U.S. EPA guidance indicates that a nonparametric alternative should be used.<sup>4</sup>

Nonparametric confidence limits are derived as follows. Given an unknown  $P \times 100$ th percentile of interest (e.g. the 50th percentile or median),<sup>5</sup> where  $P$  is between 0 and 1, and  $n$  concentration measurements, the probability that any randomly selected concentration measurements being less than the  $P \times 100$ th percentile is simply  $P$  and the probability of exceeding the  $P \times 100$ th percentile is  $1 - P$ . In light of this, the number of sample values falling below the  $P \times 100$ th percentile out of a set of  $n$  measurements follows a Binomial distribution with parameters  $n$  and  $P$ .

The connection with the Binomial distribution can be used to determine an interval formed by a given pair of order statistics (i.e. ranked values) that will contain the percentile of interest, in this case the 50th percentile. Similarly, the Binomial distribution can also be used in constructing an upper limit (i.e. one-sided) for the percentile (e.g. a 90% upper confidence limit for the 50th percentile of the distribution). The computational formula for the cumulative binomial distribution  $B(x; n, p)$ , representing the probability of getting  $x$  or fewer successes in  $n$  trials with success probability  $p$  is given by

$$Bin(x; n, p) = \sum_{i=0}^x \binom{n}{i} p^i (1-p)^{n-i}$$

To draw inference regarding the  $P = 50$ th percentile, we set  $p = .5$  in the previous equation. For a one-sided UCL we compute

$$1 - \alpha = 1 - Bin(U - 1; n, .5)$$

beginning from the sample median. We then increase  $U$  by one until in this case  $1 - \alpha$  is equal to at least .90. The smallest value of  $U$  that provides  $1 - \alpha \geq .9$  is then the order statistic (i.e., ranked value) that is the nonparametric 90% UCL for the 50th percentile of the distribution.

<sup>4</sup> "If the data do not adequately follow the normal distribution even after logarithm transformation, a nonparametric confidence interval can be constructed." U.S. EPA, 1989

<sup>5</sup> "This interval is for the median concentration (which equals the mean if the distribution is symmetric)." U.S. EPA (1989), page 6-8.

### 3 Illustration

Consider the following most recent 50 data values for PCE (D039) obtained from Premium Gold Parts Washer Solvent-150.

Table 1  
Premium Gold Parts Washer Solvent - 150  
50 most recent samples in order of increasing concentration  
in ppm

<50.000	<1.000	<0.100	<0.100	<0.100
<0.100	<0.100	<0.100	<0.100	<0.100
<0.100	0.110	0.200	0.200	0.220
0.230	0.260	0.510	0.870	0.880
1.000	1.300	1.500	1.800	2.000
2.700	2.700	3.300	5.400	7.000
<b>7.100</b>	12.000	12.300	17.200	19.700
20.000	20.000	21.200	23.600	32.300
51.100	52.500	136.000	211.000	286.000
508.000	635.000	771.000	940.000	2810.000

For  $n=50$ ,  $p=.5$  and  $1 - \alpha = .9$ , we find that  $U = 31$  is the smallest order statistic that provides 90% confidence or more ( $1 - \alpha = .941$ ). As such, we select the 31st largest value in Table 1 which is 7.1 ppm as our UCL. Since 7.1 ppm is larger than the standard of 0.7 ppm, then the D039 waste code is required for this waste stream.

### 4 Conclusion

The data in the following package have been interpreted using the methodology described. The waste codes for each stream were determined as those parameters for which the 90% UCL for the median concentration was above the regulatory limit, based on review of the last two years of samples or the most recent 50 samples, whichever yielded the larger number of samples to consider.

## Exhibit C-3

# California Annual Recharacterization Sampling Analysis

# Statistical Comparison of Annual Recharacterization Data from California to the Rest of the Nation

Prepared by  
Robert D. Gibbons Ph.D.  
for  
Safety Kleen

March 2004

## 1 Introduction

Since 1990, Safety-Kleen has undertaken a major analytical study each year to document the contaminants in some of its most common waste streams to determine which TCLP waste codes should appear on the manifest for that waste. This Annual Waste Recharacterization Program is both expensive and extensive. The general approach is based on development of an upper 90% confidence limit for the true concentration of each constituent, which can in turn be directly compared to regulatory standards to determine if the waste code should or should not be added to a particular waste stream (e.g., Premium Gold Parts Washer Solvent 150). The regulatory basis for this type of comparison stems from U.S. EPA SW846 Chapter 9 (September 1986) guidance on determining if a waste stream is hazardous. As stated by U.S. EPA, "The upper limit of the CI for  $\mu$  is compared with the applicable regulatory threshold (RT) to determine if a solid waste contains the variable (chemical contaminant) of concern at a hazardous level. The chemical contaminant of concern is not considered to be present in the waste at a hazardous level if the upper limit of the CI is less than the applicable RT. Otherwise the opposite conclusion is reached" (U.S. EPA SW846 (1986) chapter 9 page 3). The primary complicating feature is the presence of large numbers of nondetects which raises serious question regarding the use of the parametric approach. In light of this concern, nonparametric methods are used throughout this analysis. Again, as stated by U.S. EPA, "If the data do not adequately follow the normal distribution even after logarithm transformation, a nonparametric confidence interval can be constructed. This interval is for the median concentration (which equals the mean if the distribution is symmetric)" (U.S. EPA *Statisti-*

*cal Analysis of Ground-Water Monitoring Data at RCRA Facilities*, April 1989, page 6-8). Specifically, following U.S. EPA SW846, Safety Kleen constructs a nonparametric 90% upper confidence limit (UCL) for the 50th percentile of the distribution (*i.e.*, median), which is equivalent to the 90% UCL for the mean in the case of a symmetric distribution such as the normal distribution.

In review of this work, the State of California (DTSC/HML) has requested evidence that the data collected by Safety Kleen (SK) from California generators are representative of the data from the rest of the nation. Note that this involves a large number of statistical comparisons. There are as many as 11 waste streams and 33 constituents per waste stream (metals, volatile organics, semivolatile compounds, pH and flash point). In all, there are as many as  $11 \times 33 = 363$  comparisons to be made. Using 95% confidence, there will be as many as  $363 \times .05 = 18$  comparisons that are significantly different by chance alone. In the following sections, a statistical methodology is described that will detect real differences when they are present (*i.e.*, have a low false negative rate) and not identify differences that are consistent with chance expectations (*i.e.*, have a low false positive rate).

## 2 Method

To compare the California data to the rest of the nation, data from all states except California will be used to construct a statistical prediction interval for the mean (or median in the nonparametric case) concentration obtained from the California generator samples. If the actual mean concentration for the California samples is within the prediction interval, then we can conclude with 95% confidence that the California concentrations are consistent with the concentrations observed across the nation. By contrast, if the California mean concentration is outside of the prediction interval, then we can conclude with 95% confidence that the California samples contain concentrations that are either higher or lower than those found in the rest of the country (for a particular waste stream and constituent). A two-sided interval will be used to determine if additional waste codes should be added or if some waste codes should be deleted from the California list.

In the following sections, statistical details of normal, lognormal, and nonparametric forms of these prediction intervals are provided.

## 2.1 Normal Prediction Intervals for the Mean of $m$ Future Measurements

In certain cases, we may be interested in comparing an average concentration from a small group to a much larger control population. For example, we may wish to compare the mean concentration for generators in California, to the concentration distribution for the rest of the country. One approach to solving this problem is to compute a normal prediction interval for the mean of  $m$  new samples, based on a background data set of  $n$  samples. For example, the  $m$  samples may be from all generators in California, and the  $n$  samples may be from a large number of generators across the nation (excluding California). The  $(1 - \alpha)100$  percent normal prediction interval for a single future mean of  $m$  samples is:

$$\bar{x} \pm t_{[n-1, 1-\alpha/(2k)]} s \sqrt{1/m + 1/n}, \quad (1)$$

where  $t$  is an upper percentage point of Student's  $t$ -distribution on  $n-1$  degrees of freedom,  $s$  is the standard deviation of the  $n$  background samples,  $\bar{x}$  is the mean of the  $n$  background samples, and  $k$  is the number of statistical comparisons being performed.

## 3 Lognormal Prediction Intervals for the Median of $m$ Future Measurements

When the distribution of the  $n$  background measurements is shown to be lognormal, the  $(1 - \alpha)100\%$  lognormal prediction interval for the median of the next  $m$  measurements is:

$$\exp \left( \bar{y} \pm t_{[n-1, 1-\alpha/(2k)]} s_y \sqrt{1/m + 1/n} \right). \quad (2)$$

where  $\bar{y}$  and  $s_y$  are the mean and standard deviation of the natural log transformed data. While in the normal case, the analogous prediction interval is for the mean, in the lognormal case, the exponentiated limit is for the median value.

## 4 Lognormal Prediction Intervals for the Mean of $m$ Future Measurements

When the data are lognormally distributed and the comparison of interest is in reference to a future mean, we can use Land's coefficients to obtain an

approximate  $(1 - \alpha)100\%$  lognormal prediction interval for the mean of  $m$  future measurements. The lower prediction limit is

$$\exp \left( \bar{y} + .5s_y^2 + H_{\alpha/(2k)} s_y \sqrt{\frac{1}{m} + \frac{1}{n}} \right) \quad (3)$$

and the upper prediction limit is

$$\exp \left( \bar{y} + .5s_y^2 + H_{1-\alpha/(2k)} s_y \sqrt{\frac{1}{m} + \frac{1}{n}} \right) \quad (4)$$

where  $H_\alpha$  and  $H_{1-\alpha}$  are factors for deriving lognormal confidence intervals given by Land (1971, 1975).

## 5 Nonparametric Prediction Intervals for the Median of $m$ Future Measurements

In the nonparametric case, we can also construct a prediction interval for the median of  $m$  measurements based on a background of  $n$  samples. The idea is to identify a pair of upper and lower order statistics of the  $n$  background measurements that will provide  $(1-\alpha)100\%$  confidence of including the median California measurement. Note that for nonparametric intervals, the mean is not defined, so we must construct an interval for a future median. Fligner and Wolfe (1979), Guilbaud (1983) and Hahn and Meeker (1991) illustrate how the inverse hypergeometric distribution (Guenther, 1975) can be used to identify the appropriate order statistic of the  $n$  background measurements that will provide the desired level of confidence  $1 - \alpha$ , for given values of  $n$  and  $m$ . The inverse hypergeometric distribution is computed as the function

$$G(l, u, r, m, n) = \sum_{i=l}^u g(i, r + i, m, n) \quad (5)$$

where

$$g(i, r + i, m, n) = \frac{\binom{r-1}{i} \binom{n-r}{n-i}}{\binom{n}{m}} \quad (6)$$

and  $l$  is the lowest and  $u$  is the highest order statistic in the current interval,  $r$  is the median rank of the  $m$  new samples and  $n$  is the number of background measurements. To obtain a two-sided upper prediction limit (UPL), we iteratively solve for

$$G(l, u - 1, r, m, n) \geq 1 - \alpha/(2k), \quad (7)$$

for  $l$  and  $u$ .

## 6 Summary of Statistical Approach

In summary, depending on detection frequency, and distributional form, normal, lognormal, or nonparametric prediction intervals were computed to compare the mean(median) concentration in California for each waste stream, and for each monitored constituent to the national database (excluding California). For normal and lognormally distributed constituents, we constructed a prediction interval for a future mean. If distributional testing for the national database (excluding California) did not support normality or lognormality, or if the detection frequency was less than 50%, we computed a nonparametric prediction interval for a future median concentration. Given the large numbers of constituents, we adjusted the individual comparison false positive rate (for each waste stream) to provide an overall false positive rate of 5% (i.e., 95% confidence) for each waste stream.

In those cases in which the actual mean(median) for the California data exceeded the UPL, a normal 90% upper confidence limit was computed for that waste, stream, and constituent, and that state-specific limit will be used to determine whether a specific waste-code should be associated with that waste stream in California.

## 7 Results

The previously described statistical methodology was applied to the following constituents:

Constituents used in the Analysis

<u>Constituent</u>
1,1-dichloroethylene
1,2-dichloroethane
1,4-dichlorobenzene
2,4,5-trichlorophenol
2,4,6-trichlorophenol
2,4-dinitrotoluene
2-methylphenol
Arsenic
Barium
Benzene
Cadmium
Carbon tetrachloride
Chlorobenzene
Chloroform
Chromium
Flash point
Hexachlorobenzene
Hexachlorobutadiene
Hexachloroethane
Lead
M+p-cresol
Mercury
Methyl ethyl ketone
Nitrobenzene
Pentachlorophenol
pH
Pyridine
Selenium
Silver
Tetrachloroethylene
Trichloroethylene
Vinyl chloride

in the following waste streams:

Waste Streams used in the Analysis

Waste Stream
Antifreeze
Auto Oil
Dry Cleaner Bottoms (DCB)
Aqueous Parts Washer (APW)
Immersion Cleaner
Industrial Oil
Paint Waste
Parts Washer Solvent (PWS) 105+150
Parts Washer Solvent 105R
Parts Washer Solvent 150
Parts Washer Solvent Sludge/Dumpster Mud (SDM)
Parts Washer Solvent Tank Bottoms (TB)

Overall, the majority of California data were consistent with the rest of the United States. 1,4DCB was less than the immersion cleaner LPL, whereas pH exceeded the UPL. For paint waste, TCE was less than the national LPL. For PWS 105+150, 1,4-DCB, 2-methylphenol, and benzene all exceeded the corresponding national UPLs. For PWS-SDM, pH exceeded the UPL. For PWS-TB, flash point was less than the national LPL.

For these waste streams and constituents, the California 90% normal UCLs (which can be used in place of the national values) were

Waste Stream	Constituents used in the Analysis			
	Constituent	CA UCL in mg/L	NAU UCL in mg/L	Reg Limit in mg/L
Antifreeze	PCE	272	NA	0.7
Auto Oil	PCE	690	NA	0.7
Auto Oil	Benzene	21	NA	0.6
Immersion Cleaner	1,4-DCB	80	140	7.6
Immersion Cleaner	pH	10.5	10	2-12.5
Paint Waste	TCE	64	27.1	0.6
Parts Washer Solvent 105+150	1,4-DCB	.54	<2.0	7.6
Parts Washer Solvent 105+150	2-methylphenol	.44	1.8	200
Parts Washer Solvent 105+150	Benzene	8.7	2.2	0.6
Parts Washer Solvent SDM	pH	8.7	8.2	2-12.5
Parts Washer Solvent TB	Flash Point	Too Few (n=2)	145	140

These UCLs can be used in place of the national UCLs; however, I do not recommend use of the California UCLs for PCE in antifreeze and auto oil, because they are elevated due to a single outlying value. All analytical Tables are presented in the Appendices.

	TCLP Metals	EPA SW-846 1311, 6010D, 7470A, 7471B
	TCLP Semi-Volatiles	EPA SW-846 1311, 8270D
	TCLP Volatiles	EPA SW-846 1311, 8260B
Bottom Sediment from the Spent Parts Washer Solvent Tank and Return/Fill	Same as above	
Immersion Cleaner	Same as above	
Paint and Paint Gun Cleaner Waste	Same as above	
Aqueous Brake Cleaner	Same as above	
Dry Cleaner Waste	Same as above	

Based on the process generating the waste streams outlined in the above table, 40 CFR 261.24 regulated herbicides and pesticides are not expected to be present; and are therefore, not included in the parameters tested under the Annual Re-Characterization Program.

Analysis is performed on a representative grab sample obtained from a single customer's waste container using a COLIWASA (Composite Liquid Waste Sampler) unless compositing is required by a facility-specific waste analysis plan.

## Exhibit C-5

### Sampling Procedures

# Annual Re-characterization Sampling Instructions

Good sampling practices are critical to the success of the Annual Re-characterization program. Please take your time when pulling samples, ensuring that all of the following requirements are fulfilled.

## Training Requirements and Supporting Documentation

### ✓ **SAFETY FIRST!**

- ✓ Personal Protective Equipment (PPE) – Follow requirements in attached PPE Matrix
- ✓ Prior to shipping samples by FedEx Air, you must complete the following:
  - IATA Dangerous Goods Regulations Training.
  - Sample shipping requirements are outlined in BOG O310-005 (US) and OC310-005/OC310-005 FC (Canada) and Clean Harbors TC 8.0 Handling, Packaging, and Transporting Samples policy

## Supply Checklist

**NOTE:** To minimize opportunity for contamination, all AR sampling supplies are to be stored in facility office building until needed for actual sampling.

- ✓ Disposable COLIWASA (SK P/N 8941)
- ✓ Disposable plastic scoop
- ✓ Disposable plastic bucket if composite required (e.g., 6 gallon SK P/N 706)
- ✓ Sample Kits
  - SK P/N 3419 – Required for all dry cleaning related materials
  - SK P/N 82260 – Required for all other samples
- ✓ Housekeeping Supplies
  - PIG® Universal Heavy-Weight Mat
  - PIG® Heavy-Duty Maintenance Wipes
  - Plastic garbage bags
- ✓ Non sparking tools
- ✓ Grounding and bonding equipment
- ✓ Paperwork and Packaging Supplies
  - Chain of Custody form
  - Pen and Sharpie Marker
  - Packaging Tape

## Pre-sampling Preparation

- ✓ Time – allow 15 minutes per sample
- ✓ **IMPORTANT** - Make arrangements with warehouse workers/material handlers to set aside containers from different customers. Each container sampled must be from a different customer.
- ✓ Place sample kit freezer packs in the freezer 24 hrs prior to sampling event.
- ✓ Purchase bags of ice to supplement the freezer packs if shipping samples in warmer weather
- ✓ Fill out Chain of Custody (COC) forms completely

## How to fill out the Chain of Custody (COC) Form

1. Complete all fields in the COLLECTION INFORMATION section
2. **IMPORTANT** - Both the Customer Name(s) and Customer Number(s) associated with the container(s) being sampled must be documented on the COC.

In the event the analytical report shows atypical waste codes, we'll be able to track the sample back to the generator to discuss their specific process and possible source for contamination. Decision will need to be made regarding whether or not the generator's waste should remain as CORE, or is better handled through CWS.

3. A unique identification number must be assigned to each sample using the format **AR2015\_PeopleSoft Plant ID\_sample type** (e.g., AR2015\_CAZ\_DC Perc Bottoms, AR2015\_CAZ\_Premium Solvent, etc.).
4. The same number must be written on the associated sample jar custody label so that the lab can match-up paperwork with samples upon receipt.
5. The sample collector must sign the RELINQUISHED BY section and enter the date and time of shipment.
6. Enter the air bill number on the COC form and make a copy of the form for your records.

### Sampling

The majority of facilities' WAPs require "grab samples". A select few, however, require composite samples. See section below on how to obtain a composite sample.

The following table summarizes how samples are typically taken. Keep in mind, the waste streams required for sampling are permit specific (i.e., not every facility will be required to sample every stream outlined in the below table).

- Sampling Methods/Practices to be used
  - ASTM D5495 - *Standard Practice for Sampling with a Composite Liquid Waste Sampler (COLIWASA)*
  - ASTM D5633 - *Standard Practice for Sampling with a Scoop*

Sample Type	Sampling Location	Sample Size/Kit	Homogenization Technique	Sampling Device
Aqueous Brake Cleaner	5 gallon poly carboy	1 quart TCLP kit	Grab sample using multiple COLIWASA pulls or pour contents into a new bucket  Stir/mix contents before sampling.	COLIWASA
Dry Cleaner Naphtha/PERC Bottoms/Filters	Drum	1 quart DOT SP-9168 Exemption Packaging	Grab sample  Stir/mix content of drum with COLIWASA before sampling	COLIWASA or Scoop
Immersion Cleaner	Drum	1 quart TCLP kit	Grab sample  Stir/mix content of drum with COLIWASA before sampling	COLIWASA
Paint Gun Cleaner Paint Waste	Drum	1 quart TCLP kit	Grab sample  Stir/mix content of drum with COLIWASA before sampling	COLIWASA
Parts Washer Solvent Bulk Tank	Tank	1 quart TCLP kit	Grab sample	Tank valve or from tanker using a COLIWASA during annual draw down
Dumpster Sludge (APW and PWS)	Return and Fill	1 quart TCLP kit	Grab sample  Stir/mix up Return and Fill bottoms with scoop before sampling	Scoop

Sample Type	Sampling Location	Sample Size/Kit	Homogenization Technique	Sampling Device
Tank Bottoms (APW and PWS)	Tank	1 quart TCLP kit	Grab sample during tank clean out Stir/mix up tank bottoms with scoop before sampling Grab sample	Scoop
PWS 105	Drum	1 quart TCLP kit	Stir/mix content of drum with COLIWASA before sampling Grab sample	COLIWASA
PWS Premium	Drum	1 quart TCLP kit	Stir/mix content of drum with COLIWASA before sampling Grab sample	COLIWASA
APW	Drum	1 quart TCLP kit	Stir/mix content of drum with COLIWASA before sampling Grab sample	COLIWASA
Antifreeze	Drum	1 quart TCLP kit	Stir/mix content of drum with COLIWASA before sampling Grab sample	COLIWASA
Used Oil	Drum	1 quart TCLP kit	Stir/mix content of drum with COLIWASA before sampling	COLIWASA

1. Bring all items in the *Equipment Checklist*, including frozen sample kit freezer packs/ice, with you to the sampling location.
2. Wear required PPE
3. Obtain a representative sample using a disposable plastic scoop or disposable COLIWASA

**IMPORTANT** – a new scoop or COLIWASA must be used for each sample pulled

4. Place all sampling debris in plastic garbage bag(s) and dispose of as Branch Generated Debris
5. Ensure the sample jar lid is tight. Seal the lid to the jar by wrapping with packaging tape.
6. Attach *Custody Seal* across the lid of the jar in such a way that the seal must be broken to open the jar. The *Custody Seal* must be signed by the sampler and contain the date, time the sample was pulled, and unique sample ID (ID must follow required format and match the ID written on the accompanying COC).
7. Place the sample jar(s) into a "Samples Only" refrigerator until ready to ship.
8. When ready to ship, place the quart sample jar into the TCLP kit with frozen freezer packs. Use additional bagged ice if shipping during warm temperatures. Close up the Styrofoam cooler and place the COC paperwork on top before sealing up the cardboard shipping box using shipping tape.

**IMPORTANT** - Ship samples Monday thru Wednesday via *FedEx Priority Overnight* to ensure they arrive Thursday or Friday when lab personnel are available to unpack and place in a refrigerator.

**TestAmerica Laboratory**  
**Attention: Debra Bowen (412.963.2445)**  
**301 Alpha Drive, RIDC Park**  
**Pittsburgh, PA 15238**

**CRITICAL** – SAMPLE(S) MUST ARRIVE COLD AND LAB MUST ANALYZE WITHIN 14 CALENDAR DAYS FROM THE DATE YOU PULLED THE SAMPLE(S). IF SAMPLES ARRIVE WARM OR EXCEED 14 DAYS, YOU WILL NEED TO RESAMPLE.

### Sampling using a COLIWASA

- Ensure the COLIWASA is functioning properly before use. Confirm that the stopper is securely attached to the plastic rod and provides a good seal when in the closed position.
- **OPEN** the COLIWASA and **SLOWLY** lower into the container until it touches the bottom. The COLIWASA must not be lowered with the stopper in the closed position. Opening the stopper after the tube is submerged will cause material to flow in from the bottom layer only, resulting in gross over-representation of that layer. If lowered too fast, a non-representative sample will result.
- When the COLIWASA touches the bottom of the container, pull up on the stopper mechanism to close the COLIWASA.
- Slowly withdraw the COLIWASA from the container while wiping the outside of the COLIWASA with a disposable wipe.
- Place the end of the COLIWASA into the 32-oz sample jar and discharge contents by slowly opening the stopper mechanism.

### Obtaining a Composite Sample (Only those branches that require a composite per permit)

- Use a new disposable plastic bucket
- Use a new COLIWASA for each customer container sampled
- For each customer container sampled, you'll actually need to pull the following two samples
  - Place one COLIWASA volume into the compositing bucket
  - Using the same COLIWASA, fill a new quart glass jar (SK P/N 8895). This sample jar needs to be labeled with the customer name and number associated with the container that is being sampled. This sample will serve as a retain in the event analytical on the composite shows atypical results and we need to analyze all associated customer samples. These retains need to be stored until analytical on the composite sample is reported.
- After sampling all customer containers, mix the contents of the bucket.
- Use a COLIWASA to pull a sample of the mixture from the bucket and submit this sample to TestAmerica following instructions above.

MAKE GREEN WORK

*Part II*

**B. CONTAINERS**

The hazardous waste container storage area is depicted in Figure 8-1. The warehouse is used for storage of virgin materials, permitted hazardous wastes, and transfer wastes. The location of the permitted storage area is shown in Figure 8-1.

**CONTAINMENT SYSTEM**

The container storage area (47' 8" x 34' 1") shown in Figure 8-1 occupies the northwestern portion of the warehouse (47' 8" x 78' 6"). This warehouse area has concrete floors, and a central collection trench to form a spill containment system within the area.

The containment volume is composed of the sloped concrete floor and the collection trenches. The containment calculations are illustrated in Figure 8-2. The total containment volume was measured at 2,077 gallons. Therefore, the maximum storage capacity is 20,770 gallons. The amount of waste that is permitted to be stored in the container storage area is 6,912 gallons. Waste allowed for storage is immersion cleaner, dry cleaning solvent, parts washer solvent dumpster mud, tank bottoms, paint related wastes and oil filters. The types and number of each type of container may vary; however, the storage capacity will not be exceeded. Virgin materials (product) is stored in the southern portion of the warehouse building.

*FRS Waste and Transfer Wastes*

Transfer wastes may be stored in the southern portion of the permitted container storage area, and northwestern portion of the Return/Fill area (Figure 8-1). Since FRS wastes are transfer wastes only, they are not required to have containment, although these two areas are provided with secondary containment.

The containment area in the warehouse has been coated with Sikagard® 62 or equivalent. This material, when properly applied, is capable of withstanding the products handled by Safety-Kleen. Other coatings may be used in the future and will be evaluated by Safety-Kleen to ensure, when properly applied, they are capable of withstanding the products handled by SK. The warehouse is completely enclosed to prevent precipitation from entering. In the event the buildings sprinkler system is activated, the secondary containment system should be sufficient to contain the water. Any firewater released to the secondary containment system will be properly characterized, and disposed of, according to federal, state, and local regulations.

Spills from containers are removed by a hand-held, portable electric pump (the COMS pump), wet-dry vacuum, or sorbent materials. Since the characteristics of the stored wastes are known, no analyses are performed for the materials collected from the containment area. All collected materials are sent to a RCRA permitted recycling/reclamation facility.

Any small spill which might occur would generally puddle where it was spilled. The spilled material would be cleaned up where it puddles or be manually directed to the containment trench. In the event that a large spill were to occur, some dispersion would be expected to occur based on the direction, force, and pathway obstacles presented by and to the spill. Only a catastrophic event would result in an exceedance of the 2,077-gallon containment capacity. In this case, once outside the containment area, the wastes would flow onto paved surfaces outside the building. These are the same surfaces that serve to protect soils and ground water from contamination due to spills occurring during loading/unloading.

***Container Movement***

In the container storage area, containers are handled with a hand-truck or forklift that is free of sharp points. Every time a drum is moved, a chance exists that it will be tipped over, dropped, or punctured. To minimize the possibility of spillage, containers are tightly covered and kept in an upright position. A small portable electric pump is available to quickly transfer the liquid from any leaking container into another safe container. Each route truck is equipped with a lift-gate or an electric hoist. These devices are used in the loading/unloading operation to minimize chances for spillage and/or employee injury. With the exception of parts washer solvent, drummed wastes may be loaded/unloaded at the dock on the west side of the building. The parts washer solvent is loaded/unloaded at the return/fill station.

All containers are transported, moved, and stored carefully in an upright position. Containers are palletized whenever possible to facilitate shipping and storage. Pallets may be stacked up to seven feet, or two high (whichever is higher), while in storage. This will prevent the containers from contacting standing liquid while they are in storage. At no time will containers be stored three high within the facility, either in the container storage area or the 10-day transfer area. Pallets may be shipped up to three high during transportation. The containers will be arranged so that a two-foot aisle space exists between all rows of pallets such that all containers can be readily visible for inspection and handling.

***INCOMPATIBLE, IGNITABLE, AND REACTIVE WASTE MANAGEMENT***

All materials are managed in accordance with the local fire protection code and fire department recommendations. All containerized ignitable wastes are stored at least 50 feet from the property line.

The facility does not routinely manage unwashed containers that may previously have held materials that would be incompatible with wastes stored at the facility. Also, the used parts washer solvents and used aqueous parts washer solvents consist of materials that are compatible and suitable for bulking.

***Procedure for Managing Waste Types***

The solvents stored at this facility are typically compatible with each other and with other materials handled at this facility. In some isolated instances, special waste segregation procedures may be necessary at this facility. Wastes are stored primarily in polyethylene and steel containers. Immersion cleaner, dry cleaning, paint waste, and FRS waste containers are never opened at the Branch. Over-pack containers are used for the management of containers whose integrity has been compromised. For ease of inventory control and product integrity, separation and grouping of both used and unused solvents is a standard practice at the Branch. All containers are designed and constructed to be compatible with the stored material and to minimize the possibility of breakage and leaking, in accordance with DOT shipping container specifications.

***Potential Fire Sources***

The following is a list of fire prevention and minimization measures:

1. *All wastes and products are kept away from ignitable sources* – Personnel must confine smoking and open flames to the Branch designated area which is located outside the front door of the office area. No other smoking areas are designated. The parts washer solvent handling area and the aboveground storage tanks are separate from the warehouse area to minimize the potential for a fire to spread or injury to personnel to occur.

2. *Ignitable wastes are handled so that they do not:*
  - become subject to extreme heat or pressure, fire, explosion, or a violent reaction – The parts washer solvent waste is stored in a tank or in containers, none of which are near sources of extreme heat, fire, potential explosion sources, or subject to violent reactions. The tanks are vented and the containers kept at room temperature to minimize the potential for pressure build-up.
  - produce uncontrolled toxic mists, fumes, dusts or gases in quantities sufficient to threaten human health – The vapor pressure of petroleum-based parts washer solvent is low (2 mm Hg) and it is reactive with strong oxidizers only. Toxic mists, fumes, dusts, or gases will not form in quantities sufficient to threaten human health since strong oxidizers are carefully segregated at this facility and the solvent vaporization will be minimal under normal working conditions.
  - produce uncontrolled fires or gases in quantities sufficient to pose a risk of fire or explosion – See above and below.
  - damage the structural integrity of the Safety-Kleen facility – The solvents stored at this facility will not cause deterioration of the tank, containers, or other structural components of the facility.
  - Per 40 CFR 264.17(b)(5), where specifically required by other sections of this part, the owner or operator (SK) of a facility that treats, stores or disposes ignitable or reactive waste, or mixes incompatible waste or incompatible wastes and other materials, must take precautions to prevent reactions which: through other like means threaten human health or the environment.
3. *Adequate aisle space is maintained to allow the unobstructed movement of personnel, fire protection equipment, and decontamination equipment to any area of the facility operation in an emergency.*
4. *“NO SMOKING” signs are posted in areas where solvents are handled or stored.*
5. *Fire extinguishers are checked weekly by Branch personnel.*

***External Factors***

The design of the facility is such that a harmful spill is highly unlikely to occur from most external factors. The storage tanks are inaccessible to non-Safety-Kleen personnel and the pump switches are located inside. Also, the container storage area is in a building which is inaccessible to unauthorized personnel.

1. *Vandalism* – Only extreme vandalism would result in a solvent spill or fire. Responses to spills and fires are described in the Contingency Plan (Section 5)
2. *Employee Strikes* – A strike would not result in a solvent spill or fire.
3. *Power Failure* – A power failure would not result in a spill or fire. Should a power failure occur, all activities requiring electricity will cease.
4. *Flooding* – The site elevation is above the projected 100-year floodplain.
5. *Storms or Cold Weather* – The solvent return/fill station is covered to eliminate the possibility of rain or snow entering the dumpsters. No opportunity is foreseen to affect the facility with snow, cold weather, or storm weather.
6. *Hurricanes* – Facility will follow the procedures within the contingency plan.

***Run On***

The container storage area is 2' above grade in order to prevent and manage run on per 40 CFR Parts 264.175(b)(4) & 270.15(a)(4).

***CONTAINER MANAGEMENT***

***General Protocols***

Container management is of paramount importance to Safety-Kleen. All containers are routinely inspected to ensure that the containers are in good condition. If rusting or structural defects are visible, or if the container begins to leak, the contents of the container are immediately transferred to a new sound container. Over-pack containers are commonly used for the management of containers whose integrity has been compromised. Hazardous waste containers are always kept closed during storage except when adding or removing waste. Containers are not handled or stored in a manner that could potentially cause a rupture or leak.

*Specific Waste Stream Containers*

Parts washer solvent is collected in containers and generally emptied into the wet dumpster at the return/fill station (which is piped to the tank farm). The containers are designed and constructed to be compatible with the stored material and to minimize the possibility of breakage and leaking, in accordance with DOT shipping container specifications.

The immersion cleaner is always contained in partially filled covered containers before, during, and after its use. Until received at the recycle center, the immersion cleaner is never transferred to another container. The containers of used immersion cleaner are returned to the facility and stored in the designated container storage area before shipment to a permitted Safety-Kleen/Clean Harbors TSDF.

Dry cleaning waste is stored in steel or polyethylene containers and consists of perchloroethylene-based waste and naphtha-based waste. The contents of the dry cleaning waste containers are not removed or processed at the Sanford Branch. It is stored in the designated container storage area prior to shipment to a permitted Safety-Kleen, or Clean Harbors TSDF.

Paint wastes consist of various lacquer thinner and paints. The waste is collected in containers at the customer's location and the containers are then stored in the designated container storage area of the warehouse prior to shipment to a permitted Safety-Kleen, or Clean Harbors TSDF.

FRS wastes are stored in steel or polyethylene containers that are compatible with the material in them. FRS wastes are managed as transfer wastes.

*Revision 0 – 11/10/18*

As part of its protocol for handling mercury-containing lamps and devices destined for recycling, the Branch provides customers with four-foot and eight-foot boxes which hold up to 39 lamps. Boxes are inspected prior to transport from the customer to the Branch. Boxes containing broken lamps are not accepted by Safety-Kleen. If the lamps are broken while in the custody of Safety-Kleen, the entire contents of the box are sealed in plastic shrink wrap or transferred to another container and closed. The boxes are picked up at customer locations and are stored at the Branch in a designated area within the container storage area (Figure 8-1). The boxes used to store mercury-containing lamps and devices are labeled in accordance with Florida Administrative Code (FAC) 62-737.400(5)(b). The boxes are periodically shipped to a permitted mercury recovery or reclamation facility.

Safety-Kleen sells its' own private label antifreeze in 55-gallon containers. Customers will then place used antifreeze in these containers to be shipped back to the branch. These containers are stored in the warehouse until being shipped to SK distribution centers. From there the used antifreeze is shipped to 3<sup>rd</sup> party recyclers.

Safety-Kleen handles all types of batteries with the exception of lithium batteries. Batteries are stored in 5- and 16-gallon poly containers. Lead acid batteries may be stored on pallets secured by plastic straps. All applicable batteries, per 40 CFR Part 273.2 & 273.9, are managed in accordance with the Standards For Universal Waste Management found in 40 CFR Part 273. Batteries not meeting those standards may be managed as 10-day transfer waste.

***CONTAINER INSPECTION***

The purpose of the container inspection plan is to establish a procedure and schedule for the systematic monitoring and inspection of hazardous waste management and other material management facilities to ensure proper operation, maintain compliance, and prevent the release of hazardous wastes to the environment. The Branch Manager or designee is responsible for carrying out the inspections of all hazardous waste management facilities in accordance with the following procedure and schedule.

***Revision 0 – 11/10/18***

Inspections are completed electronically (CO CSA Inspection). In the event the system is unavailable they may be completed manually on paper (Figure 8.4-1). Examples of the inspection logs (Electronic & Paper) for the container storage area and associated loading/unloading areas are presented at the end of Part II.B. Container storage area inspections include the following:

- Verify that total volume is within permitted limits.
- Physically examine the condition of containers to verify that leaks have not occurred since the last inspection;
- Note the number, condition, observations made, and any date and nature of repairs or other remedial actions for hazardous waste containers generated by the Safety-Kleen branch;
- Verify that all container identification, dates, and hazardous waste labels are attached and current;
- inspect container placement and stacking such as aisle space, height, and stability of stacks; and
- Examine containment areas to detect signs of deterioration and failure of the containment system such as cracks, breakage, settlement, and spillage.

As deficiencies are detected, the Branch Manager will ensure that they are remedied promptly. Any deficiencies which could create an environmental or human health hazard will be rectified immediately.

Other inspections at the facility include those performed on a weekly basis for the security systems. These inspections are described in the contingency plan.

***CONTAINER STORAGE AREA CLOSURE PLAN***

The container storage area closure plan and closure cost estimates are provided as part of the overall closure plan for the facility in Part II K.

AREA VOLUME CALCULATIONS

DETERMINE: CONTAINMENT VOLUME OF WAREHOUSE AREA (DRUM STORAGE)

GIVEN:

NOTE: FLOOR PLAN DIMENSIONS WERE MEASURED DURING THE ERM SITE VISIT PERFORMED 1/6/93. THE 2" SLOPE COULD NOT BE MEASURED, BUT WAS ASSUMED CORRECT FOR PURPOSES OF THESE CALCULATIONS.

ASSUMPTIONS: ASSUME FLOOR CONFIGURATION IS SIMILAR TO THE FRUSTRUM OF A PYRAMID, AND APPLY THE VOLUME FORMULA FOR A FRUSTRUM.

FLOOR VOLUME:

$$V = \frac{h}{3} (A_1 + A_2 + \sqrt{A_1 A_2})$$

WHERE  $h = 0.17'$   
 $A_1 = 2 \times 12 = 24 \text{ ft}^2$   
 $A_2 = 78.7 \times 46.3 = 3,644 \text{ ft}^2$

$$V = \frac{0.17}{3} (24 + 3,644 + \sqrt{24 \times 3,644})$$

$$V = 224.6 \text{ ft}^3 = 1,680 \text{ GALLONS}$$

TRENCH VOLUME:

$$(2 \times 2 \times 2.33) + ((2.33 + 2) \times 10 \times 2) = 53 \text{ ft}^3 = 396 \text{ GALLONS}$$

$$\text{TOTAL VOLUME: } 224.6 \text{ ft}^3 + 53 \text{ ft}^3 = 277.6 \text{ ft}^3 = 2,077 \text{ GALLONS}$$

<p>Note condition of inspection items. If item does not apply to an area, mark N/A. All unsatisfactory findings must be explained below. Include any repairs, changes or other remedial actions required or performed.</p>	
CO CSA Inspection Items	
Container Placement and Stacking - Check for evidence of failure (e.g., containers on pallets, pallets too high, unstable, other).	
Sealing of Containers - Check for evidence of failure (e.g., containers not closed or sealed, open).	
Labeling of Containers - Check for evidence of failure (e.g., no label, improper label, content, other).	
Container Integrity - Check for evidence of failure (e.g., condition, bulging, leaks, rust, corrosion, other).	
Pallets - Check for evidence of failure (e.g., broken, loose, condition).	
Doors - Check for evidence of failure (e.g., indoor area, broken or not working as intended).	
Base/ Foundation/ Roof - Check for evidence of failure (e.g., cracked, gaps, other).	
Berms/ Racks - Check for evidence of failure (e.g., cracks, gaps, broken, other).	

Debris and Refuse - Check for evidence of failure (e.g., proper storage, location, container type, other).	
Exit Signs - Check for evidence of failure (e.g. missing, lamps, battery backup, other).	
Aisle Space - Check for evidence of failure (e.g., minimum 2 ft required, other).	
Containment Area - Check for evidence of failure (e.g., secondary containment, curbing, floor, cracks, deterioration, ponding or wet spots, other).	
Sumps - Check for evidence of failure (e.g., cracks, ponding or wet spots, pitting or deterioration, other).	
Loading/ Unloading Areas - Check condition of area (e.g., available equipment, spill response, containment, pad condition, valve access box, ponding or wet spots, other).	
Communication and Alarm System - Check for evidence of failure (e.g., test function, siren, strobe, other).	
Storage Capacity - Check for acceptable limit (e.g., area or permit restrictions, type restriction, volume limit, other).	
Bonding and Grounding - Check for evidence of failure (e.g., loose, broken, corrosion or deterioration, other).	
Pumps - Check for evidence of failure (e.g., deterioration or broken, leaks, other).	
Inventory Age - Check for acceptable limit (e.g., within area limits, permit restrictions, other).	
Satellite Accumulation Containers - Check for condition and appropriate for area (e.g., filter/basket, solids, label and marking, other).

**Part II**

**C. TANK SYSTEM**

***ENGINEERING ASSESSMENT OF TANK SYSTEM***

An engineering assessment of the tank system was conducted in September 2013. Another engineering assessment of the tank system will be conducted within 10 years of the September 2013 integrity assessment.

***TANK SYSTEM SPECIFICATIONS***

The facility includes five aboveground steel tanks. Four 20,000- gallon steel tanks in the above ground storage tank farm, and one 12,000-gallon double walled steel tank adjacent to the tank farm (Figure 9.2-1). Hazardous waste used parts washer solvent is returned from Safety-Kleen’s customers in containers and the solvent is transferred via the wet dumpsters into a 20,000-gallon tank, prior to bulk shipment to Safety-Kleen recycle center. The other four tanks, include two 20,000-gallon tanks (Used Oil), and one 20,000-gallon tank (Clean Solvent), and one 12,000 gallon tank (Used Antifreeze). These four tanks are not considered RCRA tanks. All of the tanks are grounded.

***Material Compatibility***

Waste stored in the RCRA tank at this facility is used parts washer solvent. The parts washer solvent is compatible with the mild steel tank structure. As with all petroleum storage vessels, water will accumulate over time due to condensation and the water will accumulate in the bottom of the tank.

***Tank Operation Procedures and Design***

Used solvent is returned from customers via containers and poured into the wet dumpsters which have barrel washers enclosed within them. The container is then placed on roller brushes within the barrel washer. As the machine is turned on, the container rotates on the brush and the outside of the container is cleaned. A nozzle in the barrel washer sprays a stream of solvent into the bottom of the container to flush the inside of

***Revision 0 – 11/10/18***

the container. The machine is then turned off and the container is removed. This process takes several seconds per container. The container is then refilled with clean solvent using a pump and nozzle assembly similar to a gasoline dispenser. The waste is transferred to the tank via piping and a pump.

The used solvent is fed to a sump in the bottom of the wet dumpster and automatically pumped to the used parts washer solvent storage tank. A basket within the sump collects sludge from the cleaning operations. Periodically, this basket is removed and sludge is removed and placed into a sludge drum for disposal. The wet dumpsters are located in the return/fill station, which is underlain by a secondary containment structure.

The used solvent storage tank is designed and constructed to be compatible with the materials stored. The tank has an emergency vent and pressure/vacuum vent that were installed in accordance with National Fire Protection Association (NFPA) standards, and is equipped with a high-level alarm. A 3” emergency gate valve is located at the base of the tank where the outgoing piping is threaded into the tank. The tank seams are lapped with full fillet welds. The weld was performed with an E70 electrode and can withstand a 4-psi air pressure test (which is performed by the manufacturer). The used solvent tank was installed new in 1991. The tank is aboveground, supported by an insulated carbon steel skirt that is anchored to a concrete pad. The tank is supported on an 8-inch skid that is placed on an 8-inch concrete foundation slab. Therefore, no surface run-on will contact the wastes stored at the site and no run-off collection system is required. To minimize the amount of precipitation that may collect inside the containment area, a canopy has been installed over the tank farm. If rainwater does accumulate in the containment area and it has been verified that no spill has occurred, the rainwater will be discharged to the ground surface. Only the Branch Manager or someone operating under his/her direct orders may discharge to the ground surface. If it is not possible to verify that a spill has not occurred, the rainwater will be disposed of in the wet dumpsters.

***Controls and Spill Prevention***

The tank farm dike and the return/fill station have been sealed with a chemical resistant

***Revision 0 – 11/10/18***

coating. The hazardous waste solvent tank has been fitted with a Moormann Analog Automatic Tank Gauge (information on the gauge is provided at the end of this section). Level gauges are used to measure liquid levels in tanks. Float switch-activated automatic high level alarms (which consist of a strobe light and siren) signal the tanks being 95% full. This alarm allows an operator more than two minutes to stop operations and avoid overfilling the tank. The gauges of the tank are read before filling the tank with additional material. Tank level readings are also taken prior to the filling of a tanker truck to prevent overfilling of the truck or tank. A tanker truck provided with a suction pump is used to withdraw used parts washer solvent from the tank. No other equipment or standby equipment is used in the operation of the above-ground tanks. The tank should be operated at a maximum volume of 19,000 gallons (95% of capacity). The secondary containment under the tanks and return/fill station is cleaned within 24 hours of a spill, or in as timely a manner as possible, to prevent harm to human health and the environment.

2" single-walled steel piping from the wet dumpsters in the return/fill area to the top of the hazardous waste solvent tank is connected by threaded connectors. This piping runs under the dock and leaves the warehouse building on the south side of the return/fill station. At that point the piping system continues south towards the tank farm and is outside secondary containment (this part of the system has welded connectors). Once it reaches tank farm secondary containment the piping runs vertical to the top of the tank. The piping system leaving the tank is constructed of 3" single-walled steel and is inside secondary containment. Figure 9.1-1 details the system.

***Leak Detection System***

The Safety-Kleen Sanford branch has installed an automatic leak detection system at the above ground storage tank farm for the hazardous waste solvent tank. This system will enable detection of leaks, or releases, to the secondary containment 24-hours a day. The system consists of an Intellipoint sensor, which is placed beside the tank at the base of the

secondary containment structure. The sensor detects the presence or absence of liquids. It will be monitored 24-hours a day, seven days a week, by a 3<sup>rd</sup> party (Protection One). If the sensor detects liquid it will immediately send a warning notice to Protection One, who will then immediately call the emergency coordinator for the Sanford branch. This system will allow continuous leak detection monitoring when the facility is not occupied.

***IGNITABLE OR REACTIVE WASTE REQUIREMENT (40 CFR PART 264.198(b))***

The owner or operator of a facility where ignitable or reactive waste is stored or treated in a tank must comply with the requirements for the maintenance of protective distances between the waste management area and any public ways, streets, alleys, or an adjoining property line that can be built upon as required in Tables 2-1 through 2-6 of the National Fire Protection Association's "Flammable and Combustible Liquids Code," (1977 or 1981), (incorporated by reference, see Sec. 260.11) (264.198(b)).

***TANK SYSTEM SECONDARY CONTAINMENT***

***Tank Containment***

The three tanks in the above ground storage tank farm are underlain by a 56'7" x 38'8" concrete slab, surrounded by a 3' high concrete wall. The wall height in the containment varies with the floor slope and directs flow toward an approximately 35-gallon blind sump. No surface run-on or precipitation will contact with the wastes stored in the tank farm and no run-off collection and management system is deemed necessary. A metal canopy installed over the tank farm minimizes the chance of precipitation accumulating inside the containment area. The layout of the tank farm is shown in Figure 9.2-1. Tank farm containment calculations are shown in Figure 9.2-2. Containment volume was estimated to be 28,092 gallons. This volume represents greater than 100 percent of the capacity of the largest tank within the containment area. The containment areas have been coated with Sikagard® 62 or equivalent. Inspections of the sealant in the containment areas will be conducted as described in Tank System Inspections. If the sealant is found to be worn or deteriorated such that repairs are warranted, the sealant will be repaired in accordance with manufacturers' specifications.

***Return/Fill Containment***

The return/fill station is a 54' 2" x 78' 9" structure (Figure 9.3-1) located between the office building and warehouse. It contains two wet dumpsters which handle the flow of waste solvent to the hazardous waste storage tank. These dumpsters are not intended for storage but can hold a maximum of 216 gallons (108 gallons per dumpster).

The area is designed such that the route trucks can be backed into the containment area. The roof extends over the truck unloading area so that no precipitation can get into the return/fill station containment area. The containment for the return/fill station is provided by two blind sumps, with a total capacity of approximately 69-gallons. The floor in the return/fill station is sloped to direct flow toward the two sumps. The total containment was estimated to be 5,011-gallons, as shown in Figure 9.2-2.

***TANK SYSTEM INSPECTIONS***

The purpose of the inspection plan is to establish a procedure and schedule for the systematic monitoring and inspection of hazardous waste management and other material management facilities to ensure proper operation and maintain compliance. The Branch Manager or that person's designee is responsible for carrying out the inspections of all hazardous waste management facilities in accordance with the following procedure and schedule. Figure 9.4-1 is an example Daily Inspection Log for the tank system. This Daily Inspection Log, or equivalent, will be used during daily inspections. Daily inspections of the tank and dumpsters will consist of the following:

- Note volume in tank.
- Observe tank exterior for loose anchoring, wet spots, leaks.
- Check the automatic high level alarm. In addition, measure the depth of used solvent in the tank to confirm the proper functioning of the automatic alarm system and to determine unexpected deviations in tank measuring data, or a sudden drop in liquid level, which may indicate leakage.
- Inspect secondary containment coating, walls, and piping (All piping is above ground).
- Inspect transfer pumps for leaking seals and overheated motors.

*Revision 0 – 11/10/18*

- Inspect the solvent dispensing hose, fittings, and valve for any leaks, damage, or wear that could cause a leak to develop.
- Inspect the valves for evidence of leaking. Stem leaks from worn glands and warped valve bodies should be repaired. If the valve cannot be repaired, replace the unit.

Also, the tanks will be visually inspected and tested periodically. The period of time between tank inspections, including shell thickness testing, will not exceed ten years. This time frame for tank inspection is adequate based on Safety-Kleen's experience at its other facilities in Florida. Daily inspection of the solvent return receptacle (wet dumpster) will consist of an inspection for leaks and excess dumpster mud build-up.

***TANK SYSTEM CLOSURE AND CONTINGENT POST-CLOSURE PLAN***

The tank system closure plan is provided as part of the overall closure plan for the facility in Part 2 K. As discussed below, a contingent post-closure plan for the tanks is not required.

***TANK SYSTEM CONTINGENT POST-CLOSURE PLAN***

The tank system at the Sanford facility meets the secondary containment requirements of 40 CFR 264.193, and is, therefore, not required to have a contingent post-closure plan under 40 CFR 264.197(c). In addition, Safety-Kleen intends to remove or decontaminate all tank system components, associated containment systems, and contaminated soils (if any) at the time of closure. However, should future conditions indicate that all contaminated soils and tank system components cannot practicably be decontaminated or removed, then a plan to perform post-closure care in accordance with the post-closure care requirements that apply to landfill (40 CFR 264.310) will be prepared for implementation upon FDEP approval.

***RESPONSE TO LEAKS AND DISPOSITION OF UNFIT-FOR-USE TANK SYSTEMS***

In the event that a leak or spill were to occur from a tank system or secondary containment system, the actions identified herein will be undertaken.

***Immediate Response***

All waste flow to the tank system in question will be ceased immediately. An inspection will be undertaken to identify the cause of the release. Waste flow to the tank system will not resume until the tank system has been inspected, repaired, and declared fit for use. In order to prevent further releases, or to allow inspection and a repair of the system, it may be necessary to remove the waste from the tank system. This waste removal will occur within 24 hours after detection of the leak, or at the earliest practicable time.

All material released to the secondary containment area will be removed within 24 hours, or in as timely a manner as possible, to prevent harm to human health and the environment. Every reasonable effort will be made to prevent migration of the release to soils or surface water. If necessary, visible contamination of surface water and soil will be removed and properly disposed of.

***Notifications***

Spills less than, or equal to one pound are exempt from reporting requirements per 40 CFR Part 264.196(d)(2). All other releases require notification as described in the Contingency Plan.

***Subsequent Reporting***

Subsequent reporting will be completed as referenced in the facility Contingency Plan.

***Repair or Closure***

If the integrity of the containment system has not been damaged, the system may be returned to service as soon as the released waste is removed and repairs, if necessary, are made. If the tank was the source of the release, the tank must be repaired prior to returning the tank system to service. If the release was from a tank system component which did not have secondary containment, then secondary containment must be provided for this component before the system can be returned to service. The exception to this is if the component can be visually inspected. In this instance, the component may be repaired and returned to service. If a component is replaced, the component must satisfy the requirements for new tank systems and components.

All major repairs must be certified by an independent, registered, professional engineer in accordance with 40 CFR 264.196(f). The engineer must certify that the repaired system is capable of handling hazardous wastes without release for the intended life of the system. This report must be placed in the operating record and maintained until closure of the facility.

If repairs that meet these requirements cannot be performed, the tank system must be closed in accordance with the closure plan.

*Part II*

*C. TANK SYSTEM*

***ENGINEERING ASSESSMENT OF TANK SYSTEM***

An engineering assessment of the tank system was conducted in September 2013. Another engineering assessment of the tank system will be conducted within 10 years of the September 2013 integrity assessment.

***TANK SYSTEM SPECIFICATIONS***

The facility includes five aboveground steel tanks. Four 20,000- gallon steel tanks in the above ground storage tank farm, and one 12,000-gallon double walled steel tank adjacent to the tank farm (Figure 9.2-1). Hazardous waste used parts washer solvent is returned from Safety-Kleen’s customers in containers and the solvent is transferred via the wet dumpsters into a 20,000-gallon tank, prior to bulk shipment to Safety-Kleen recycle center. The other four tanks, include two 20,000-gallon tanks (Used Oil), and one 20,000-gallon tank (Clean Solvent), and one 12,000 gallon tank (Used Antifreeze). These four tanks are not considered RCRA tanks. All of the tanks are grounded.

***Material Compatibility***

Waste stored in the RCRA tank at this facility is used parts washer solvent. The parts washer solvent is compatible with the mild steel tank structure. As with all petroleum storage vessels, water will accumulate over time due to condensation and the water will accumulate in the bottom of the tank.

***Tank Operation Procedures and Design***

Used solvent is returned from customers via containers and poured into the wet dumpsters which have barrel washers enclosed within them. The container is then placed on roller brushes within the barrel washer. As the machine is turned on, the container rotates on the brush and the outside of the container is cleaned. A nozzle in the barrel washer sprays a stream of solvent into the bottom of the container to flush the inside of

***Revision 0 – 11/10/18***

the container. The machine is then turned off and the container is removed. This process takes several seconds per container. The container is then refilled with clean solvent using a pump and nozzle assembly similar to a gasoline dispenser. The waste is transferred to the tank via piping and a pump.

The used solvent is fed to a sump in the bottom of the wet dumpster and automatically pumped to the used parts washer solvent storage tank. A basket within the sump collects sludge from the cleaning operations. Periodically, this basket is removed and sludge is removed and placed into a sludge drum for disposal. The wet dumpsters are located in the return/fill station, which is underlain by a secondary containment structure.

The used solvent storage tank is designed and constructed to be compatible with the materials stored. The tank has an emergency vent and pressure/vacuum vent that were installed in accordance with National Fire Protection Association (NFPA) standards, and is equipped with a high-level alarm. A 3” emergency gate valve is located at the base of the tank where the outgoing piping is threaded into the tank. The tank seams are lapped with full fillet welds. The weld was performed with an E70 electrode and can withstand a 4-psi air pressure test (which is performed by the manufacturer). The used solvent tank was installed new in 1991. The tank is aboveground, supported by an insulated carbon steel skirt that is anchored to a concrete pad. The tank is supported on an 8-inch skid that is placed on an 8-inch concrete foundation slab. Therefore, no surface run-on will contact the wastes stored at the site and no run-off collection system is required. To minimize the amount of precipitation that may collect inside the containment area, a canopy has been installed over the tank farm. If rainwater does accumulate in the containment area and it has been verified that no spill has occurred, the rainwater will be discharged to the ground surface. Only the Branch Manager or someone operating under his/her direct orders may discharge to the ground surface. If it is not possible to verify that a spill has not occurred, the rainwater will be disposed of in the wet dumpsters.

***Controls and Spill Prevention***

The tank farm dike and the return/fill station have been sealed with a chemical resistant

*Revision 0 – 11/10/18*

coating. The hazardous waste solvent tank has been fitted with a Moormann Analog Automatic Tank Gauge (information on the gauge is provided at the end of this section). Level gauges are used to measure liquid levels in tanks. Float switch-activated automatic high level alarms (which consist of a strobe light and siren) signal the tanks being 95% full. This alarm allows an operator more than two minutes to stop operations and avoid overfilling the tank. The gauges of the tank are read before filling the tank with additional material. Tank level readings are also taken prior to the filling of a tanker truck to prevent overfilling of the truck or tank. A tanker truck provided with a suction pump is used to withdraw used parts washer solvent from the tank. No other equipment or standby equipment is used in the operation of the above-ground tanks. The tank should be operated at a maximum volume of 19,000 gallons (95% of capacity). The secondary containment under the tanks and return/fill station is cleaned within 24 hours of a spill, or in as timely a manner as possible, to prevent harm to human health and the environment.

2" single-walled steel piping from the wet dumpsters in the return/fill area to the top of the hazardous waste solvent tank is connected by threaded connectors. This piping runs under the dock and leaves the warehouse building on the south side of the return/fill station. At that point the piping system continues south towards the tank farm and is outside secondary containment (this part of the system has welded connectors). Once it reaches tank farm secondary containment the piping runs vertical to the top of the tank. The piping system leaving the tank is constructed of 3" single-walled steel and is inside secondary containment. Figure 9.1-1 details the system.

*Leak Detection System*

The Safety-Kleen Sanford branch has installed an automatic leak detection system at the above ground storage tank farm for the hazardous waste solvent tank. This system will enable detection of leaks, or releases, to the secondary containment 24-hours a day. The system consists of an Intellipoint sensor, which is placed beside the tank at the base of the

secondary containment structure. The sensor detects the presence or absence of liquids. It will be monitored 24-hours a day, seven days a week, by a 3<sup>rd</sup> party (Protection One). If the sensor detects liquid it will immediately send a warning notice to Protection One, who will then immediately call the emergency coordinator for the Sanford branch. This system will allow continuous leak detection monitoring when the facility is not occupied.

***IGNITABLE OR REACTIVE WASTE REQUIREMENT (40 CFR PART 264.198(b))***

The owner or operator of a facility where ignitable or reactive waste is stored or treated in a tank must comply with the requirements for the maintenance of protective distances between the waste management area and any public ways, streets, alleys, or an adjoining property line that can be built upon as required in Tables 2-1 through 2-6 of the National Fire Protection Association's "Flammable and Combustible Liquids Code," (1977 or 1981), (incorporated by reference, see Sec. 260.11) (264.198(b)).

***TANK SYSTEM SECONDARY CONTAINMENT***

***Tank Containment***

The three tanks in the above ground storage tank farm are underlain by a 56'7" x 38'8" concrete slab, surrounded by a 3' high concrete wall. The wall height in the containment varies with the floor slope and directs flow toward an approximately 35-gallon blind sump. No surface run-on or precipitation will contact with the wastes stored in the tank farm and no run-off collection and management system is deemed necessary. A metal canopy installed over the tank farm minimizes the chance of precipitation accumulating inside the containment area. The layout of the tank farm is shown in Figure 9.2-1. Tank farm containment calculations are shown in Figure 9.2-2. Containment volume was estimated to be 28,092 gallons. This volume represents greater than 100 percent of the capacity of the largest tank within the containment area. The containment areas have been coated with Sikagard® 62 or equivalent. Inspections of the sealant in the containment areas will be conducted as described in Tank System Inspections. If the sealant is found to be worn or deteriorated such that repairs are warranted, the sealant will be repaired in accordance with manufacturers' specifications.

***Return/Fill Containment***

The return/fill station is a 54' 2" x 78' 9" structure (Figure 9.3-1) located between the office building and warehouse. It contains two wet dumpsters which handle the flow of waste solvent to the hazardous waste storage tank. These dumpsters are not intended for storage but can hold a maximum of 216 gallons (108 gallons per dumpster).

The area is designed such that the route trucks can be backed into the containment area. The roof extends over the truck unloading area so that no precipitation can get into the return/fill station containment area. The containment for the return/fill station is provided by two blind sumps, with a total capacity of approximately 69-gallons. The floor in the return/fill station is sloped to direct flow toward the two sumps. The total containment was estimated to be 5,011-gallons, as shown in Figure 9.2-2.

***TANK SYSTEM INSPECTIONS***

The purpose of the inspection plan is to establish a procedure and schedule for the systematic monitoring and inspection of hazardous waste management and other material management facilities to ensure proper operation and maintain compliance. The Branch Manager or that person's designee is responsible for carrying out the inspections of all hazardous waste management facilities in accordance with the following procedure and schedule. Figure 9.4-1 is an example Daily Inspection Log for the tank system. This Daily Inspection Log, or equivalent, will be used during daily inspections. Daily inspections of the tank and dumpsters will consist of the following:

- Note volume in tank.
- Observe tank exterior for loose anchoring, wet spots, leaks.
- Check the automatic high level alarm. In addition, measure the depth of used solvent in the tank to confirm the proper functioning of the automatic alarm system and to determine unexpected deviations in tank measuring data, or a sudden drop in liquid level, which may indicate leakage.
- Inspect secondary containment coating, walls, and piping (All piping is above ground).
- Inspect transfer pumps for leaking seals and overheated motors.

***Revision 0 – 11/10/18***

- Inspect the solvent dispensing hose, fittings, and valve for any leaks, damage, or wear that could cause a leak to develop.
- Inspect the valves for evidence of leaking. Stem leaks from worn glands and warped valve bodies should be repaired. If the valve cannot be repaired, replace the unit.

Also, the tanks will be visually inspected and tested periodically. The period of time between tank inspections, including shell thickness testing, will not exceed ten years. This time frame for tank inspection is adequate based on Safety-Kleen's experience at its other facilities in Florida. Daily inspection of the solvent return receptacle (wet dumpster) will consist of an inspection for leaks and excess dumpster mud build-up.

***TANK SYSTEM CLOSURE AND CONTINGENT POST-CLOSURE PLAN***

The tank system closure plan is provided as part of the overall closure plan for the facility in Part 2 K. As discussed below, a contingent post-closure plan for the tanks is not required.

***TANK SYSTEM CONTINGENT POST-CLOSURE PLAN***

The tank system at the Sanford facility meets the secondary containment requirements of 40 CFR 264.193, and is, therefore, not required to have a contingent post-closure plan under 40 CFR 264.197(c). In addition, Safety-Kleen intends to remove or decontaminate all tank system components, associated containment systems, and contaminated soils (if any) at the time of closure. However, should future conditions indicate that all contaminated soils and tank system components cannot practicably be decontaminated or removed, then a plan to perform post-closure care in accordance with the post-closure care requirements that apply to landfill (40 CFR 264.310) will be prepared for implementation upon FDEP approval.

***RESPONSE TO LEAKS AND DISPOSITION OF UNFIT-FOR-USE TANK SYSTEMS***

In the event that a leak or spill were to occur from a tank system or secondary containment system, the actions identified herein will be undertaken.

***Immediate Response***

All waste flow to the tank system in question will be ceased immediately. An inspection will be undertaken to identify the cause of the release. Waste flow to the tank system will not resume until the tank system has been inspected, repaired, and declared fit for use. In order to prevent further releases, or to allow inspection and a repair of the system, it may be necessary to remove the waste from the tank system. This waste removal will occur within 24 hours after detection of the leak, or at the earliest practicable time.

All material released to the secondary containment area will be removed within 24 hours, or in as timely a manner as possible, to prevent harm to human health and the environment. Every reasonable effort will be made to prevent migration of the release to soils or surface water. If necessary, visible contamination of surface water and soil will be removed and properly disposed of.

***Notifications***

Spills less than, or equal to one pound are exempt from reporting requirements per 40 CFR Part 264.196(d)(2). All other releases require notification as described in the Contingency Plan.

***Subsequent Reporting***

Subsequent reporting will be completed as referenced in the facility Contingency Plan.

***Repair or Closure***

If the integrity of the containment system has not been damaged, the system may be returned to service as soon as the released waste is removed and repairs, if necessary, are made. If the tank was the source of the release, the tank must be repaired prior to returning the tank system to service. If the release was from a tank system component which did not have secondary containment, then secondary containment must be provided for this component before the system can be returned to service. The exception to this is if the component can be visually inspected. In this instance, the component may be repaired and returned to service. If a component is replaced, the component must satisfy the requirements for new tank systems and components.

All major repairs must be certified by an independent, registered, professional engineer in accordance with 40 CFR 264.196(f). The engineer must certify that the repaired system is capable of handling hazardous wastes without release for the intended life of the system. This report must be placed in the operating record and maintained until closure of the facility.

If repairs that meet these requirements cannot be performed, the tank system must be closed in accordance with the closure plan.

*Part II*

*C. TANK SYSTEM*

***ENGINEERING ASSESSMENT OF TANK SYSTEM***

An engineering assessment of the tank system was conducted in September 2013. Another engineering assessment of the tank system will be conducted within 10 years of the September 2013 integrity assessment.

***TANK SYSTEM SPECIFICATIONS***

The facility includes five aboveground steel tanks. Four 20,000- gallon steel tanks in the above ground storage tank farm, and one 12,000-gallon double walled steel tank adjacent to the tank farm (Figure 9.2-1). Hazardous waste used parts washer solvent is returned from Safety-Kleen’s customers in containers and the solvent is transferred via the wet dumpsters into a 20,000-gallon tank, prior to bulk shipment to Safety-Kleen recycle center. The other four tanks, include two 20,000-gallon tanks (Used Oil), and one 20,000-gallon tank (Clean Solvent), and one 12,000 gallon tank (Used Antifreeze). These four tanks are not considered RCRA tanks. All of the tanks are grounded.

***Material Compatibility***

Waste stored in the RCRA tank at this facility is used parts washer solvent. The parts washer solvent is compatible with the mild steel tank structure. As with all petroleum storage vessels, water will accumulate over time due to condensation and the water will accumulate in the bottom of the tank.

***Tank Operation Procedures and Design***

Used solvent is returned from customers via containers and poured into the wet dumpsters which have barrel washers enclosed within them. The container is then placed on roller brushes within the barrel washer. As the machine is turned on, the container rotates on the brush and the outside of the container is cleaned. A nozzle in the barrel washer sprays a stream of solvent into the bottom of the container to flush the inside of

***Revision 0 – 11/10/18***

the container. The machine is then turned off and the container is removed. This process takes several seconds per container. The container is then refilled with clean solvent using a pump and nozzle assembly similar to a gasoline dispenser. The waste is transferred to the tank via piping and a pump.

The used solvent is fed to a sump in the bottom of the wet dumpster and automatically pumped to the used parts washer solvent storage tank. A basket within the sump collects sludge from the cleaning operations. Periodically, this basket is removed and sludge is removed and placed into a sludge drum for disposal. The wet dumpsters are located in the return/fill station, which is underlain by a secondary containment structure.

The used solvent storage tank is designed and constructed to be compatible with the materials stored. The tank has an emergency vent and pressure/vacuum vent that were installed in accordance with National Fire Protection Association (NFPA) standards, and is equipped with a high-level alarm. A 3" emergency gate valve is located at the base of the tank where the outgoing piping is threaded into the tank. The tank seams are lapped with full fillet welds. The weld was performed with an E70 electrode and can withstand a 4-psi air pressure test (which is performed by the manufacturer). The used solvent tank was installed new in 1991. The tank is aboveground, supported by an insulated carbon steel skirt that is anchored to a concrete pad. The tank is supported on an 8-inch skid that is placed on an 8-inch concrete foundation slab. Therefore, no surface run-on will contact the wastes stored at the site and no run-off collection system is required. To minimize the amount of precipitation that may collect inside the containment area, a canopy has been installed over the tank farm. If rainwater does accumulate in the containment area and it has been verified that no spill has occurred, the rainwater will be discharged to the ground surface. Only the Branch Manager or someone operating under his/her direct orders may discharge to the ground surface. If it is not possible to verify that a spill has not occurred, the rainwater will be disposed of in the wet dumpsters.

***Controls and Spill Prevention***

The tank farm dike and the return/fill station have been sealed with a chemical resistant

***Revision 0 – 11/10/18***

coating. The hazardous waste solvent tank has been fitted with a Moormann Analog Automatic Tank Gauge (information on the gauge is provided at the end of this section). Level gauges are used to measure liquid levels in tanks. Float switch-activated automatic high level alarms (which consist of a strobe light and siren) signal the tanks being 95% full. This alarm allows an operator more than two minutes to stop operations and avoid overfilling the tank. The gauges of the tank are read before filling the tank with additional material. Tank level readings are also taken prior to the filling of a tanker truck to prevent overfilling of the truck or tank. A tanker truck provided with a suction pump is used to withdraw used parts washer solvent from the tank. No other equipment or standby equipment is used in the operation of the above-ground tanks. The tank should be operated at a maximum volume of 19,000 gallons (95% of capacity). The secondary containment under the tanks and return/fill station is cleaned within 24 hours of a spill, or in as timely a manner as possible, to prevent harm to human health and the environment.

2” single-walled steel piping from the wet dumpsters in the return/fill area to the top of the hazardous waste solvent tank is connected by threaded connectors. This piping runs under the dock and leaves the warehouse building on the south side of the return/fill station. At that point the piping system continues south towards the tank farm and is outside secondary containment (this part of the system has welded connectors). Once it reaches tank farm secondary containment the piping runs vertical to the top of the tank. The piping system leaving the tank is constructed of 3” single-walled steel and is inside secondary containment. Figure 9.1-1 details the system.

***Leak Detection System***

The Safety-Kleen Sanford branch has installed an automatic leak detection system at the above ground storage tank farm for the hazardous waste solvent tank. This system will enable detection of leaks, or releases, to the secondary containment 24-hours a day. The system consists of an Intellipoint sensor, which is placed beside the tank at the base of the

secondary containment structure. The sensor detects the presence or absence of liquids. It will be monitored 24-hours a day, seven days a week, by a 3<sup>rd</sup> party (Protection One). If the sensor detects liquid it will immediately send a warning notice to Protection One, who will then immediately call the emergency coordinator for the Sanford branch. This system will allow continuous leak detection monitoring when the facility is not occupied.

***IGNITABLE OR REACTIVE WASTE REQUIREMENT (40 CFR PART 264.198(b))***

The owner or operator of a facility where ignitable or reactive waste is stored or treated in a tank must comply with the requirements for the maintenance of protective distances between the waste management area and any public ways, streets, alleys, or an adjoining property line that can be built upon as required in Tables 2-1 through 2-6 of the National Fire Protection Association's "Flammable and Combustible Liquids Code," (1977 or 1981), (incorporated by reference, see Sec. 260.11) (264.198(b)).

***TANK SYSTEM SECONDARY CONTAINMENT***

***Tank Containment***

The three tanks in the above ground storage tank farm are underlain by a 56'7" x 38'8" concrete slab, surrounded by a 3' high concrete wall. The wall height in the containment varies with the floor slope and directs flow toward an approximately 35-gallon blind sump. No surface run-on or precipitation will contact with the wastes stored in the tank farm and no run-off collection and management system is deemed necessary. A metal canopy installed over the tank farm minimizes the chance of precipitation accumulating inside the containment area. The layout of the tank farm is shown in Figure 9.2-1. Tank farm containment calculations are shown in Figure 9.2-2. Containment volume was estimated to be 28,092 gallons. This volume represents greater than 100 percent of the capacity of the largest tank within the containment area. The containment areas have been coated with Sikagard® 62 or equivalent. Inspections of the sealant in the containment areas will be conducted as described in Tank System Inspections. If the sealant is found to be worn or deteriorated such that repairs are warranted, the sealant will be repaired in accordance with manufacturers' specifications.

***Return/Fill Containment***

The return/fill station is a 54' 2" x 78' 9" structure (Figure 9.3-1) located between the office building and warehouse. It contains two wet dumpsters which handle the flow of waste solvent to the hazardous waste storage tank. These dumpsters are not intended for storage but can hold a maximum of 216 gallons (108 gallons per dumpster).

The area is designed such that the route trucks can be backed into the containment area. The roof extends over the truck unloading area so that no precipitation can get into the return/fill station containment area. The containment for the return/fill station is provided by two blind sumps, with a total capacity of approximately 69-gallons. The floor in the return/fill station is sloped to direct flow toward the two sumps. The total containment was estimated to be 5,011-gallons, as shown in Figure 9.2-2.

***TANK SYSTEM INSPECTIONS***

The purpose of the inspection plan is to establish a procedure and schedule for the systematic monitoring and inspection of hazardous waste management and other material management facilities to ensure proper operation and maintain compliance. The Branch Manager or that person's designee is responsible for carrying out the inspections of all hazardous waste management facilities in accordance with the following procedure and schedule. Figure 9.4-1 is an example Daily Inspection Log for the tank system. This Daily Inspection Log, or equivalent, will be used during daily inspections. Daily inspections of the tank and dumpsters will consist of the following:

- Note volume in tank.
- Observe tank exterior for loose anchoring, wet spots, leaks.
- Check the automatic high level alarm. In addition, measure the depth of used solvent in the tank to confirm the proper functioning of the automatic alarm system and to determine unexpected deviations in tank measuring data, or a sudden drop in liquid level, which may indicate leakage.
- Inspect secondary containment coating, walls, and piping (All piping is above ground).
- Inspect transfer pumps for leaking seals and overheated motors.

*Revision 0 – 11/10/18*

- Inspect the solvent dispensing hose, fittings, and valve for any leaks, damage, or wear that could cause a leak to develop.
- Inspect the valves for evidence of leaking. Stem leaks from worn glands and warped valve bodies should be repaired. If the valve cannot be repaired, replace the unit.

Also, the tanks will be visually inspected and tested periodically. The period of time between tank inspections, including shell thickness testing, will not exceed ten years. This time frame for tank inspection is adequate based on Safety-Kleen's experience at its other facilities in Florida. Daily inspection of the solvent return receptacle (wet dumpster) will consist of an inspection for leaks and excess dumpster mud build-up.

***TANK SYSTEM CLOSURE AND CONTINGENT POST-CLOSURE PLAN***

The tank system closure plan is provided as part of the overall closure plan for the facility in Part 2 K. As discussed below, a contingent post-closure plan for the tanks is not required.

***TANK SYSTEM CONTINGENT POST-CLOSURE PLAN***

The tank system at the Sanford facility meets the secondary containment requirements of 40 CFR 264.193, and is, therefore, not required to have a contingent post-closure plan under 40 CFR 264.197(c). In addition, Safety-Kleen intends to remove or decontaminate all tank system components, associated containment systems, and contaminated soils (if any) at the time of closure. However, should future conditions indicate that all contaminated soils and tank system components cannot practicably be decontaminated or removed, then a plan to perform post-closure care in accordance with the post-closure care requirements that apply to landfill (40 CFR 264.310) will be prepared for implementation upon FDEP approval.

***RESPONSE TO LEAKS AND DISPOSITION OF UNFIT-FOR-USE TANK SYSTEMS***

In the event that a leak or spill were to occur from a tank system or secondary containment system, the actions identified herein will be undertaken.

***Immediate Response***

All waste flow to the tank system in question will be ceased immediately. An inspection will be undertaken to identify the cause of the release. Waste flow to the tank system will not resume until the tank system has been inspected, repaired, and declared fit for use. In order to prevent further releases, or to allow inspection and a repair of the system, it may be necessary to remove the waste from the tank system. This waste removal will occur within 24 hours after detection of the leak, or at the earliest practicable time.

All material released to the secondary containment area will be removed within 24 hours, or in as timely a manner as possible, to prevent harm to human health and the environment. Every reasonable effort will be made to prevent migration of the release to soils or surface water. If necessary, visible contamination of surface water and soil will be removed and properly disposed of.

***Notifications***

Spills less than, or equal to one pound are exempt from reporting requirements per 40 CFR Part 264.196(d)(2). All other releases require notification as described in the Contingency Plan.

***Subsequent Reporting***

Subsequent reporting will be completed as referenced in the facility Contingency Plan.

***Repair or Closure***

If the integrity of the containment system has not been damaged, the system may be returned to service as soon as the released waste is removed and repairs, if necessary, are made. If the tank was the source of the release, the tank must be repaired prior to returning the tank system to service. If the release was from a tank system component which did not have secondary containment, then secondary containment must be provided for this component before the system can be returned to service. The exception to this is if the component can be visually inspected. In this instance, the component may be repaired and returned to service. If a component is replaced, the component must satisfy the requirements for new tank systems and components.

All major repairs must be certified by an independent, registered, professional engineer in accordance with 40 CFR 264.196(f). The engineer must certify that the repaired system is capable of handling hazardous wastes without release for the intended life of the system. This report must be placed in the operating record and maintained until closure of the facility.

If repairs that meet these requirements cannot be performed, the tank system must be closed in accordance with the closure plan.

# MATERIAL LIST

## MODEL 7-S

For All Vertical Tanks Up to & Including 35'

### Material Supplied by Customer (see diagram to match square with number)

1. Gauge Housing Base Support
2. 1" Galvanized Pipe (cut to length)
3. Tank Roof Flange
4. 2" Tank Opening Pipe
5. 2" Galvanized Pipe (cut to length)
6. 1" Galvanized Nipple (any length)
7. 1" Galvanized Union

### Material Supplied by Moormann Bros.

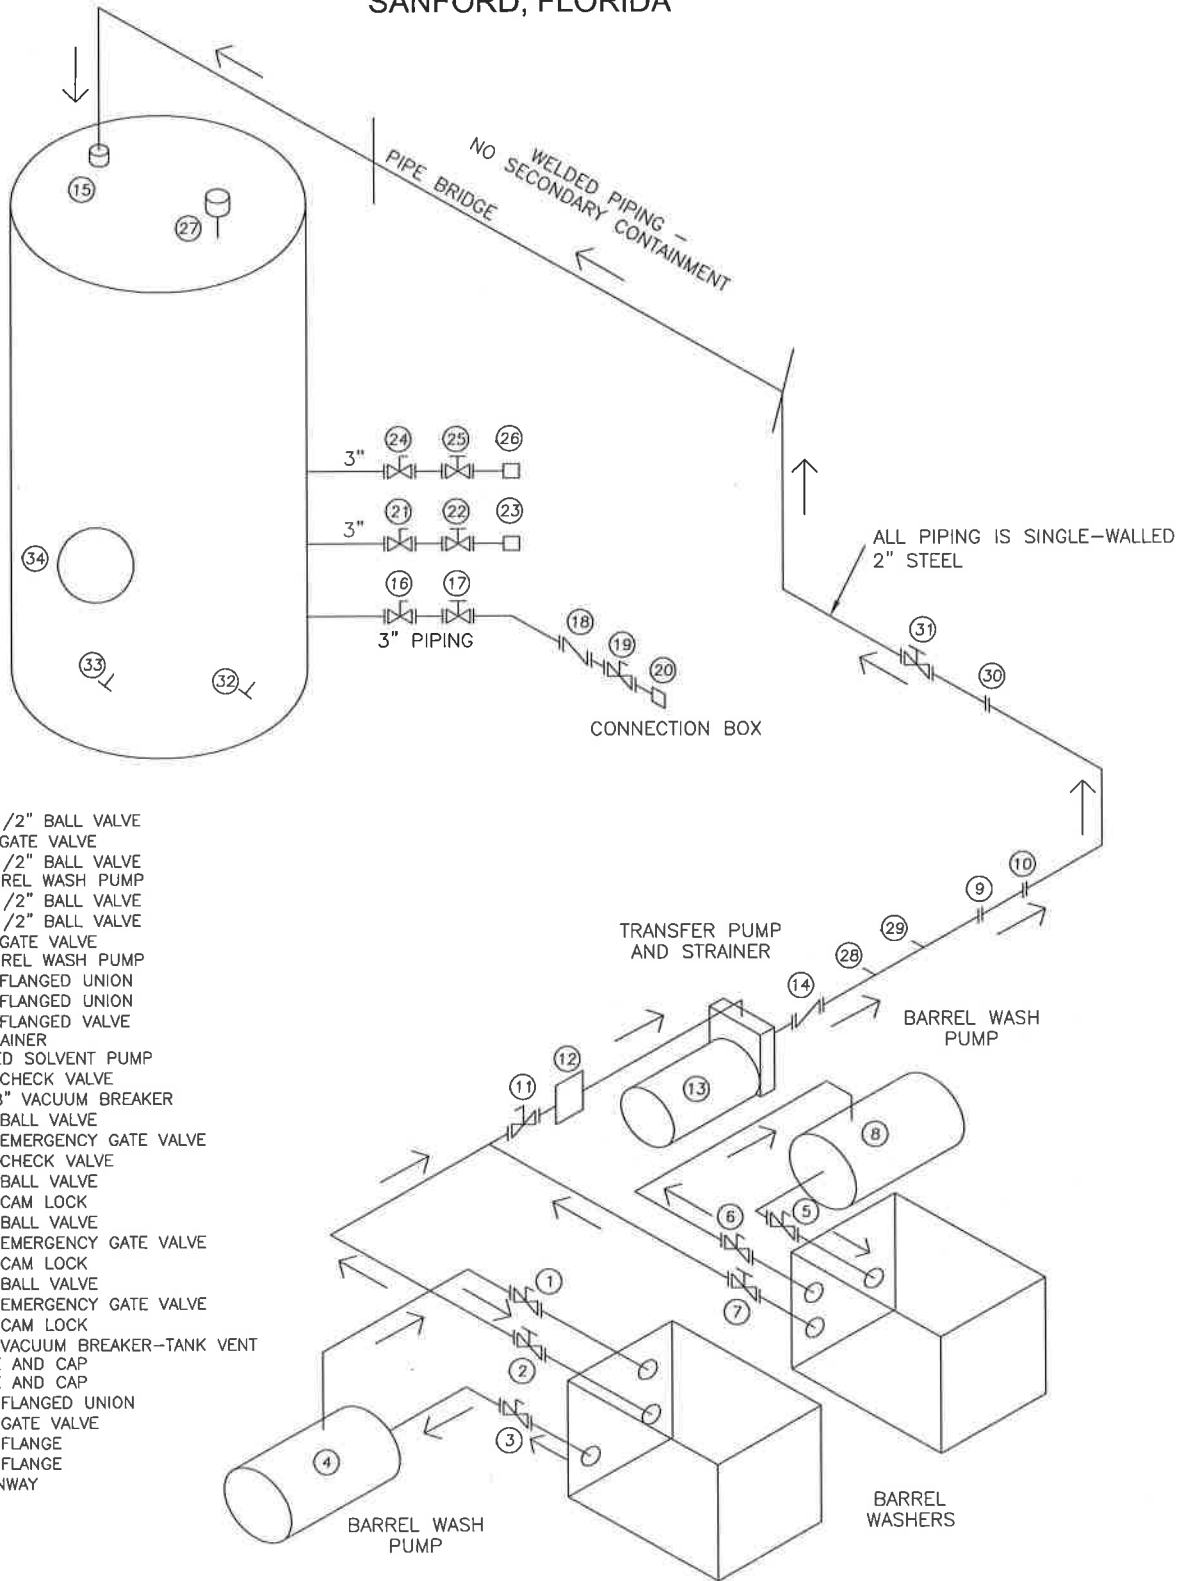

(see diagram to match circle with number)

	Part Name	Part No.	Quantity per Unit
8.	Observation Window Assembly (Frame & Lid)	A-34 / A-38	1
9.	Float – Aluminum or Stainless Steel	V-75	1
	7-S comes with aluminum float (V-75)		
	7-S-SS comes with stainless steel (V-75-S)		
10.	Stainless Steel Tape Clamp & Screws	V-93	1
11.	Elbow Assembly Complete	A-30, A-33	2
12.	2" to 1" Reducing Bushing	B-15	1
13.	Eccentric Cap Complete with Nuts & Bolts	V-71	1
14.	Pulley Rack Assembly	V-73	2
15.	Lufkin Stainless Steel High Visibility Tape	V-49	1
16.	Painted Steel Gauge Housing	V-77	1
17.	Counterweight	V-72	2
18.	Condensation Drain Plug	D-16	1
19.	PE -7 Parts Envelope to include the following: (not shown on diagram)		
	• Gaskets – Set for Observation Window	V-81, V-82	1
	• Gasket – Elbow Cap	V-83	2
	• Gasket – V-71 Eccentric Cap	V-84	1
	• Glass – Window	V-86	1
	• Stainless Steel Indicator Finger for Observation Window	V-94	1
	• Cotter Pin – Stainless Steel	V-96	4

## INSTALLATION INSTRUCTIONS – MODEL 7-S

1. Locate gauge position on ground – mark top edge of tank directly above ground location.
2. Measure, cut and thread 2" pipe (as marked on print).
3. Use pipe dope on all connections.
4. Assemble both A-30 elbows and 2" pipe as shown on print.
5. Screw (1) elbow A-30 onto 2" pipe with reducing bushing, close nipple and union as shown on print; other A-30 elbow into 2" nipple in tank then screw other end of 2" pipe into tank elbow, make straight with tank marking.
6. Level 2" pipe, use temporary wood brace, if necessary.
7. Set gauge housing with eccentric cap assembled on ground directly below overhanging elbow.
8. Measure for 1" pipe (reducing bushing in elbow to eccentric cap V-71 on gauge housing) allow for threads, cut and thread 1" pipe.
9. Screw 1" pipe into elbow, then remove V-71 eccentric cap from housing and put on 1" pipe.  
CAUTION – Be sure eccentric cap is straight and 1" outlet is farthest away from tank.
10. Fasten pulley rack with large pulley up to eccentric cap using stainless steel cotter pin.
11. Assemble other pulley rack in counterweights with large pulley down.
12. Place counterweight on ground directly beneath eccentric cap pulley rack.
13. Remove A-33 caps from both elbows.
14. Thread tape from tank elbow with numbers up and clip end first through 2" pipe and over elbow pulleys, down through 1" pipe and out eccentric cap, straight down and around bottom pulley in counterweight and up and over top pulley in eccentric cap, down to medium pulley, up and over medium pulley, down and around small pulley on counterweight and up and around small pulley on eccentric cap, down and fasten to lug on counterweight pulley rack – use stainless steel cotter pin. CAUTION – Do not thread tape over or under cross bars in pulley rack. Use caution – do not kink or bend tape. SEE DIAGRAM FOR TAPE ROUTING.
15. Fasten tape to float with tape clamp (as per print). CAUTION – Do not fasten tape clamp too tight as this may damage tape.
16. Place eccentric cap gasket on housing top and insert counterweight assembly into housing.  
CAUTION – Do not allow counterweight to drop or jerk as this may cause damage to bearings, also be sure the tape is in groove of pulleys and not on the edge.
17. Fasten housing to eccentric cap with observation window directly below 1" pipe.
18. Place outside strand of tape over tape guide in observation window, CAUTION – Do not bend or kink tape, and put only one strand of tape over tape guide.
19. If tank is empty, adjust tape reading at 1-3/8" (float draft), if it is partially full, set reading exactly with stick, make major tape reading adjustments with the float by slipping tape through tape clamp. Minor adjustments (within 1" make the observation finger). DO NOT CUT TAPE UNTIL FINAL CALIBRATION IS ACCURATE.
20. In setting the reading on the gauge, 1/2" 1/4" or even 1/8" is not close enough, be particular, set gauge to the exact amount of liquid in tank.
21. CAUTION – Let float down in tank easily. Do not let it drop.
22. Assemble observation frame and lid A-34/ A-38 place on housing, tighten for vapor-proofing.
23. Replace A-33 elbow caps with gaskets – tighten for vapor-proofing.
24. Fix base for housing either, concrete, wood post, or steel plate welded to tank, CAUTION – Do not weld gauge housing to tank.
25. In most climates, condensation forms inside the tank and gauge. A drain plug has been provided for draining at the bottom of housing. In most climates, this is necessary 2 times a year (spring & fall). However, in extreme cases, draining is required more often.

## Tank Containment

### Concrete Structure:

$$\begin{aligned}V_c &= L \times W \times H \quad (\text{Dimensions from Fig. 5.6-5}) \\ &= 56.58 \times 38.67 \times 3 \\ &= 6,563.85 \text{ ft}^3 \times 7.48 \text{ gal/ft}^3 \\ &= 49,097.6 \text{ gallons}\end{aligned}$$

Sump (Diameter = 23"; Height = 19.5"):

$$\begin{aligned}V_s &= \frac{\pi}{4} D^2 H \\ &= \frac{\pi}{4} \left(\frac{23}{12}\right)^2 \left(\frac{19.5}{12}\right) \\ &= 4.69 \text{ ft}^3 \times 7.48 \text{ gal/ft}^3 \\ &= 35.1 \text{ gallons}\end{aligned}$$

### Interior Displacements

Tank Pads (3 @ 14' by 14' by 8")

[Note: Southern used oil tank sits directly on concrete slab.]

$$\begin{aligned}V_p &= 14 \times 14 \times \left(\frac{8}{12}\right) \times 3 \\ &= 392 \text{ ft}^3 \times 7.48 \text{ gal/ft}^3 \\ &= 2,932.2 \text{ gallons}\end{aligned}$$

Tank Shell (above wall height; Diameter = 12')

[Note: Assume HW tank fails, excluding this volume.]

$$\begin{aligned}V_{TS} &= \frac{\pi}{4} 12^2 \left(3 - \frac{8}{12}\right) \times 2 + \frac{\pi}{4} 12^2 (3) \\ &= 263.89 + 339.29 \\ &= 603.18 \text{ ft}^3 \times 7.48 \text{ gal/ft}^3 \\ &= 4,511.8 \text{ gallons}\end{aligned}$$

Tank Fill Box (above wall height; 4' by 3' on 20" stand)

$$V_{FB} = 4 \times 3 \times \left(\frac{16}{12}\right)$$

Inspector Name

Area of Inspection

Inspection Date and Time

**CO Tank Systems Inspection Instructions**

Note condition of inspection items. If item does not apply to an area, mark N/A. All unsatisfactory findings must be explained below. Include any repairs, changes or other remedial actions required or performed.

**CO Tank Systems Inspection Items**

Tanks - Check for evidence of failure (e.g., rusty or loose anchoring, distortion, paint failure, other).

Pipes/Piping Supports - Check for evidence of failure (e.g., distortion, corrosion, paint failure, other).

Valves - Check for evidence of failure (e.g., disconnected, corrosion, sticking, leaks, other).

Fittings/Hose Connections - Check for evidence of failure (e.g., loose, disconnected, corrosion, other).

Liquid Level - Check for acceptable level. (e.g., high level max, permitted volume, other).

Secondary Containment - Check for evidence of failure (e.g., cracks, ponding or wet spots, pitting or deterioration, other).

Sumps - Check for evidence of failure (e.g., cracks, ponding or wet spots, pitting or deterioration, other).

Bonding and Grounding - Check for evidence of failure (e.g., loose, broken, corrosion or deterioration, other).

Transfer Equipment/Pump and Pump Motors - Check for availability and condition (e.g., pumps, filters, strainers, hoses, leaks, overheating, other).	
Communication and Alarm System - Check for evidence of failure (e.g., test function, siren, strobe, other).	
Satellite Accumulation Containers - Check for condition and appropriate for area (e.g., filter/basket, solids, label and marking, other).	
Manways, Hatches, Other Openings - Check for evidence of failure (e.g., condition, corrosion, closure, other).	
Pressure Relief Valves (PRV)/ Flame Arrestors - Check for evidence of failure (e.g., condition, corrosion, other).	
Tanks marked with the words "Hazardous Waste" - Check for appropriate markings.	
Tanks not used marked as "Out of Service" - Check for appropriate markings.	
Tanks marked as to the contents - Check for appropriate markings ( e.g., Non-Haz Only).	
Monitoring Equipment/Level Indicators - Check for evidence of failure (e.g., pressure and temperature gauges, level indicators, sticking, condensation, disconnected, other).	
Loading/ Unloading Areas - Check condition of area (e.g., available equipment, spill response, containment, pad condition, valve access box, ponding or wet spots, other).

Pump Seals - Check for evidence of failure (e.g., leaks, other).	
Pump Motors - Check for evidence of failure (e.g., overheating, other).	
Fittings - Check for evidence of failure (e.g., leaks, other).	
Valves - Check for evidence of failure (e.g., leaks, sticking, other).	
Hose Connections and Fittings - Check for evidence of failure (e.g., cracked, loose, leaks, sticking, other).	
Hose Body - Check for evidence of failure (e.g., crushed, cracked, thin spots, leaks, other).	
Clam Shell Unit Type - Lid Fusible Link - Check for evidence of failure (e.g., broken, spring missing, other).	
Clam Shell Unit Type - Lid Hinge Assembly - Check for evidence of failure (e.g., broken pivot arm, damaged lid arm, missing pins, other).	
Sliding Lid Unit Type - Gaskets - Check for	

evidence of failure (e.g., broken, cracked distorted, other).	
Sliding Lid Unit Type - Lid/ Slide Assembly - Check for evidence of failure (e.g., damaged lid, rollers, slide rail, temperature gauge, limit switches, other).	
Roll-up Door Unit Type - Seals - Check for evidence of failure (e.g., broken cracked, distorted, other).	
Roll-up Door Unit Type - Door/ Roll-up Assembly - Check for evidence of failure (e.g., damaged lid, rollers, slide rail, temperature gauge, limit switch, other).	
Wet Dumpster/Drum Washer - Check for evidence of failure (e.g., leaks, rust, split seems, distortion, deterioration, excess debris, sediment accumulation, other).	
Secondary Containment - Check for evidence of failure (e.g., excess sediment, leaks, distortion, deterioration, excess debris, other).	
Loading/Unloading Area - Check for evidence of failure (e.g., cracks, ponding or wet spots, deterioration, other).	
Satellite Accumulation Containers - Check for condition and appropriate for area (e.g., filter/basket, solids, label and marking, other).	
Ventilation Fan - Check for evidence of failure (e.g., inoperative, shutters jammed, other).

*Part II*

**K. CLOSURE PLAN**

Safety-Kleen constructed the Sanford Branch with the intent that it will be a long-term facility for the distribution of Safety-Kleen products. No on site disposal activity occurs at the facility and, hence no disposal capacity will be exhausted that will necessitate closure of the facility. Based on current business and facility conditions, the Sanford facility is expected to remain in operation at least until the year 2035. In the event that some presently unforeseen circumstance(s) would result in the discontinuance of operations and permanent closure or sale of the facility, this closure plan identifies the steps necessary to close the facility at any point during its intended life. This plan should be applied to the tanks system, container storage areas, and equipment used by the facility for hazardous waste management to accomplish the closure performance standard of 40 CFR 264.111. It is intended that all closures will be complete and final with removal of waste and decontamination of the facility and associated equipment. This will eliminate the need for maintenance after closure and the possibility of escape of hazardous waste constituents into the environment. Because closure is not anticipated for some time Safety-Kleen agrees to notify the Department when this decision is made to work with FDEP to update the closure plan using the current requirements and FDEP guidance documents.

***FACILITY DATA***

1. Waste Management Facility Descriptions
  - a. Aboveground Storage Tank: The tank is a 20,000-gallon steel tank. This tank is located within a containment system consisting of a 56'7" x 38'8" foundation slab with 3' perimeter walls.
  - b. Solvent Return/Fill Station: The station is a 54' 2" x 78' 9" concrete portion of the building located between the office and warehouse. It contains two wet dumpsters. The two active dumpsters are used to receive returned solvent from containers and pump it to the used parts washer solvent tank. These dumpsters are not intended for storage, but can hold a max. of 216 gallons (108 gal. each).

hold a max. of 216 gallons (108 gallons each).

- c. Container Storage Area: The container storage area has a 47'7" x 78' 6" portion of the building. The floors in this area are sloped toward a 2' x 12' containment trench in the middle of the area with a containment capacity of 2,077-gallons. The maximum storage capacity of this area is 20,770-gallons. Wastes allowed for storage are paint related wastes, parts washer solvent dumpster mud, tank bottoms, dry cleaning wastes, spent immersion cleaner, and oil filters.

2. Maximum Inventory of Wastes

- a. Used Parts Washer Solvent: 20,000 gallons
- b. Wet Dumpsters: 216 gallons
- c. Containerized Waste: 6,912 gallons. (Note: This includes any combination of 5, 16, 30, 55, 85-gallon containers, and 350-gallon totes used for various management purposes).

All wastes will be disposed offsite in accordance with appropriate hazardous waste regulations.

***CLOSURE PROCEDURES***

***Container Storage Areas***

- At closure, all containers present at the facility will be sent to a Safety-Kleen, Clean Harbors TSDF, or third party facility where the contents in the containers will be reclaimed and the containers cleaned for reuse. The containers will be removed and transported with proper packaging, labeling, and manifesting.
- The concrete floor, spill containment area, and walls will be scrubbed with a detergent solution and rinsed with clean water to remove waste residuals from the surface. A final rinsate sample will be collected and analyzed to determine the effectiveness of decontamination. Unless otherwise designated in the formal closure plan, one rinsate sample will be collected from the container storage area. The rinsate sample will be analyzed by EPA method 6010 for the eight RCRA metals and nickel, and for volatile and semi-volatile organics by EPA methods 8015, 8260, and 8270. The area will be decontaminated to meet FDEP's guidance at the time of closure. The pans, grating, and floor beneath the pans in the pans in the paint waste shelter will be cleaned by appropriate means to remove visible contamination. Safety-Kleen intends to recycle the metal components (e.g., pans and grating) in accordance with 40 CFR 261.6(a)(3)(ii) or to reuse them at another Safety-Kleen facility. Accordingly, decontamination of these components is required only to the extent necessary for safe demolition, storage, and transportation of the scrap. Decontamination of the mercury-containing lamps and devices storage area will be conducted at the time of closure as part of the overall decontamination of the container storage areas.

*Revision 0 - 11/10/18*

- Decontamination (i.e., detergent wash and clean rinse) fluids will be collected and contained for proper management. One representative sample of the contained fluids will be collected to determine whether the water is hazardous. This determination will be made by laboratory analysis of the sample for the metals and organics (excluding pesticides/herbicides) on the TCLP list. (Note: This wash water will be from all areas undergoing decontamination, not just from the container storage areas.)
- If the wash water or other wastes generated in the closure process are determined to be hazardous, they will be disposed of properly as a hazardous waste. Otherwise, the material will be disposed of as an industrial waste. Assumptions of wash water generation are based on Safety-Kleen's past experience from other facility closures. The generated wash water is expected to be non-hazardous based on Safety-Kleen's experience from other facility closures.
- Equipment to be used to clean this area includes mops, pails, scrub brushes, a wet/dry vacuum, and containers. The mops, pails, and scrub brushes will be containerized and disposed of as hazardous waste. The wet/dry vacuum and containers used will be washed with a detergent solution and rinsed to decontaminate them.

***Solvent Return/Fill Station***

- At closure, any sludge in the wet dumpsters ("dumpster mud") will be cleaned out and containerized, labeled, and manifested for proper disposal.
- The metal superstructure components of the station (i.e., the wet dumpsters and the dock grating) will be cleaned by appropriate means to remove visible contamination. Safety-Kleen intends to recycle these components as scrap metal in accordance with 40 CFR 261.6(a)(3)(ii), or to reuse them at another Safety-Kleen facility. Accordingly, decontamination of the components is required only to the extent necessary for safe demolition, storage, and transportation of the scrap.

- The concrete floor in the return/fill station will be scrubbed with a detergent solution and rinsed with clean water to remove waste residuals from the surface. A final rinsate sample will be collected and analyzed to determine the effectiveness of decontamination. Unless otherwise designated in the formal closure plan, the rinsate sample will be analyzed for the same constituents as the container storage area rinsate sample. The area will be decontaminated to meet FDEP's guidance at the time of closure.

#### *Aboveground Storage Tank System*

*Note: The product solvent & used oil tanks will be closed in accordance with Chapter 62-762, F.A.C.*

#### *Metal Components of the Tank Storage System*

- At closure, the contents of the tank will be removed to a tanker truck using existing unloading equipment and subsequently transported to a Safety-Kleen recycle center, or 3<sup>rd</sup> party facility.
- Once the contents have been drained, the tank will be opened by removing the manways and vented by supplying fresh air to the interior space of the tank. Any residual wastes will be removed via vacuum for recycling with the previously drained wastes.
- The interior of the tank as well as all associated piping and appurtenant equipment will then be cleaned by appropriate means to remove visible contamination. Safety-Kleen intends to recycle the tank, piping, and appurtenant equipment as scrap metal in accordance with 40 CFR 261.6(a)(3)(ii), or to reuse them at another Safety-Kleen facility. Accordingly, decontamination of the metal components is required only to the extent necessary for the safe demolition, storage, and transportation of the scrap.

#### *Concrete Containment System*

- Final disposition of the concrete containment system where the waste tank is located will depend in part upon the presence or absence of underlying soil contamination. To make that determination, the upper six inches of soil

immediately below the concrete slab will be sampled at the following locations, as follows:

1. Under the waste tank, and at the containment system sumps;
  2. Beneath the most prominent of any cracks observed in the slab, and under the tanker connections.
- Sampling locations, and the number of samples required will ultimately be determined after consultation with the Department
  - These sample locations may be adjusted as actual field conditions warrant, but a minimum of two samples will be retrieved. These samples will be analyzed for petroleum constituents, and by EPA Method 6010 for the eight RCRA metals and nickel, and for volatile and semi-volatile organics by EPA Methods 8015, 8260, and 8270. Analysis for Mercury will be obtained by the appropriate 7000-series analytical method.
  - The perimeter walls and foundation slab of the secondary containment area will be scrubbed with a detergent solution and rinsed with clean water to remove waste residuals from the surface. A final rinsate sample will be collected and analyzed to determine the effectiveness of decontamination. Unless otherwise designated in the formal closure plan, the rinsate sample will be analyzed for the same constituents as the container storage area rinsate sample. The area will be decontaminated to meet FDEP's guidance at the time of closure. Safety-Kleen anticipates that proper maintenance of the concrete containment system will allow the slab to remain in place at closure.
  - Safety-Kleen will proceed with demolition of the perimeter walls. If it is determined that soil contamination exists beneath the foundation slab, Safety-Kleen will demolish the entire concrete structure and complete a further delineation of the extent of soil contamination to be removed to complete closure. Any site assessment, interim measures, or corrective action that may be required will be conducted in accordance with Chapter 62-780, F.A.C. and permit requirements.

*Revision 0 - 11/10/18*

- Prior to demolition of the perimeter walls, one representative composite sample of the construction materials will be collected and submitted for analyses (by TCLP) of metals and organics (excluding pesticides and herbicides) unless an alternate analytical protocol is required by the selected disposal facility. The representative composite sample will include biased grab samples collected from areas of staining. If no stained areas are evident, the grab sample locations will be randomly selected. If the construction materials are classified as non-hazardous using TCLP, then they will be disposed of as construction debris in an appropriately permitted disposal facility. In the event the construction materials are identified as hazardous using TCLP, the construction materials will be disposed of as a hazardous waste in accordance with RCRA regulations.
- If the foundation slab must be removed, it will be demolished and the construction materials tested using TCLP in the same manner as that described above for the walls of the secondary containment system.
- If soil removal becomes necessary, Safety-Kleen will backfill the excavated area with clean, compacted general fill material graded to match existing surfaces and to preclude ponding of water. To ensure backfill is clean (i.e., is not contaminated with constituents at concentrations above Florida soil cleanup goals or site background (whichever is higher)), one representative composite sample of the backfill sample will be analyzed by EPA Method 6010 for the eight RCRA metals and nickel, and by EPA Methods 8015, 8260, and 8270.

***FACILITY CLOSURE SCHEDULE AND CERTIFICATION***

- Safety-Kleen may amend the closure plan at any time during the active life of the facility. The active life of the facility is that period from initial receipt of hazardous waste to certification of final closure. Safety-Kleen will amend the plan any time changes in operating plans or facility design affect the closure plan or whenever a change occurs in the expected year of closure of the facility. The plan will be amended within 60 days of the changes.
- Safety-Kleen will notify the FDEP of its intent to close the facility in accordance with Chapter 62-730.240, F.A.C.
- Safety-Kleen will remove from the site all hazardous wastes in accordance with the approved closure plan. The Regional Administrator may approve a longer period if Safety-Kleen demonstrates that:
  1. The activities required to comply with this paragraph will, of necessity, take longer than 90 days to complete; or
  2. The following requirements are met:
    - a) The facility has the capacity to receive additional wastes;
    - b) There is a reasonable likelihood that a person other than Safety-Kleen will recommence operation of the site;
    - c) Closure of the facility would be incompatible with continued operation of the site; and
    - d) Safety-Kleen has taken and will continue to take all steps to prevent threats to human health and the environment.
- Safety-Kleen will complete closure activities in accordance with the approved closure plan within 180 days after receiving the final volume of wastes or 180 days after approval of the closure plan, whichever is later. When closure is completed, all facility equipment and structures shall have been properly disposed of, or decontaminated by removing all hazardous waste and residues.
- Within 60 days of closure completion, Safety-Kleen will submit certification by an independent registered professional engineer that the facility has been closed in accordance with the specifications in the approved closure plan.

Figure 10.3-1 presents a typical closure schedule anticipated for the Sanford facility.

***CONTINGENT POST-CLOSURE PLAN***

The tank system at the Sanford facility meets the secondary containment requirements of 40 CFR 264.193, and is, therefore, not required to have a contingent post-closure plan under 40 CFR 264.197(c). In addition, Safety-Kleen intends to remove or decontaminate all tank system components, associated containment systems, and contaminated soils (if any) at the time of closure. However, should future conditions indicate that all contaminated soils and tank system components cannot practicably be decontaminated or removed, then a plan to perform post-closure care in accordance with the post-closure care requirements that apply to landfills (40 CFR 264.310) will be prepared for implementation upon FDEP approval.

***CLOSURE COST ESTIMATE***

The cost for closure of the facility is estimated in the CCE worksheets and summarized as follows:

• Inventory Removal	\$44,481
• Storage Tank Decontamination	\$17,831
• Decontaminate The Return/Fill Station	\$19,491
• Decontaminate Container Storage Area	\$12,302
• Containerize, Stage, Transport & Dispose of Decon Wastes	\$24,557
• Closure Certification	\$12,354
Subtotal	\$131,016
15% Contingency	\$19,652
2018 Total Closure Cost Estimate	\$150,668

**P. Information Requirements Regarding Potential Releases From Solid Waste Management Units**

Facility Name Safety-Kleen Systems, Inc.  
 EPA/DEP I.D. No. FLD 984 171 165  
 Facility location Sanford Florida  
city state

1. Are there any of the following solid waste management units (existing or closed) at your facility? A solid waste management unit (SWMU) is a discernable unit at which solid wastes have been placed at any time, irrespective of whether the unit was intended for the management of solid or hazardous waste. Such units include all areas at a facility where solid wastes have been routinely and systematically released, as described in the July 27, 1990 Federal Register (55 FR 30798).

**DO NOT INCLUDE HAZARDOUS WASTE UNITS CURRENTLY SHOWN IN YOUR PART B APPLICATION.**

- |                                |   |  |
|--------------------------------|---|--|
| landfill                       | <input type="checkbox"/> Yes            | <input checked="" type="checkbox"/> No |
| surface impoundment            | <input type="checkbox"/> Yes            | <input checked="" type="checkbox"/> No |
| land farm                      | <input type="checkbox"/> Yes            | <input checked="" type="checkbox"/> No |
| waste pile                     | <input type="checkbox"/> Yes            | <input checked="" type="checkbox"/> No |
| incinerator                    | <input type="checkbox"/> Yes            | <input checked="" type="checkbox"/> No |
| storage tank                   | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            |
| container storage area         | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            |
| injection wells                | <input type="checkbox"/> Yes            | <input checked="" type="checkbox"/> No |
| wastewater treatment units     | <input type="checkbox"/> Yes            | <input checked="" type="checkbox"/> No |
| transfer station               | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            |
| waste recycling operations     | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            |
| land treatment facility        | <input type="checkbox"/> Yes            | <input checked="" type="checkbox"/> No |
| boiler/industrial furnace      | <input type="checkbox"/> Yes            | <input checked="" type="checkbox"/> No |
| other (units not listed above) | <input checked="" type="checkbox"/> Yes | <input type="checkbox"/> No            |

2. If there is a "yes" answer to any of the items in 1. above, on separate sheet(s) of paper, provide a description of the wastes that were stored, treated or disposed of in each unit. In particular, focus on whether or not the wastes would be considered hazardous wastes or hazardous constituents under RCRA. (Hazardous wastes are those identified in 40 CFR Part 261. Hazardous constituents are those listed in Appendix VIII of 40 CFR Part 261.) Include any available data on quantities or volumes of wastes disposed of and the dates of disposal. Provide a description of each unit and include capacity, dimensions, and location at the facility. Provide a site plan, if available, and the dates of operation of the unit [40 CFR 270.14(d)(1)].

Revision Number	0
Date	11/10/18
Page	2 of 2

3. On separate sheet(s) of paper, describe all data available on all prior or current releases of hazardous wastes or constituents to the environment that may have occurred in the past or may still be occurring, for each unit noted in 1. above and also for each hazardous waste unit in your Part B application [40 CFR 270.14(d)(1)].

Provide the following information for each SWMU:

- a. Date of release.
  - b. Specifications of all wastes managed at the unit, to the extent available.
  - c. Quantity or volume of waste released.
  - d. Describe the nature of the release (i.e., spill, overflow, ruptured pipe or tank, etc.)
  - e. Location of the unit on the topographic map provided under 40 CFR 270.14(b)(19).
  - f. Designate the type of unit.
  - g. General dimensions and structural description (supply any available drawings).
  - h. Dates of operation.
4. On separate sheet(s) of paper, provide for each unit all analytical data that may be available which would describe the nature and extent of the environmental contamination that exists as a result of the prior releases described in 3. above. Focus on the concentrations of hazardous wastes or constituents present in contaminated soil or groundwater [40 CFR 270.14(d)(3)].

***Part II***

***P. #2 INFORMATION REQUIREMENTS REGARDING SOLID WASTE***

***MANAGEMENT UNITS***

SWMU-1(Container Storage Area Inside Service Center) is described within the permit application in section Part II B.

SWMU-2 (Tank Storage Area Inside Tank Farm) is described within the permit application in section Part II C.

SWMU-3 (Return and Fill Area) is described in Part II C.

SWMU-4 (Satellite Container Area (Inside SWMU-3)) is one 55-gallon container next to the wet dumpsters in the return/fill area.

SWMU-5 (Oily Water Tanker Trailer) is a 6,000 gallon tanker sitting in the back loading/unloading dock. This tanker is used for storage of material serviced by Safety-Kleen's Vacuum program.

SWMU-6 (Spent Mineral Spirits Tank (Inside SWMU-2)) is located within the tank farm and is described in Part II C.

SWMU-7 (Used Oil Tanks (Inside SWMU-2)) consists of two 20,000 gallon tanks for storage of used oil.

SWMU-8 (Used Antifreeze Tank) is a 12,000 gallon double-walled vertical above-ground storage tank immediately west of the tank farm.

SWMU-9 (Transfer Waste Storage Area) consists of the northwestern portion (Bay 1) of the return and fill area, and the southern portion of the container storage area.

SWMU-10 (Solid Waste Dumpster) is a municipal dumpster for solid wastes that is located immediately west of the used antifreeze tank.

SWMU-11 (Loading/Unloading Areas) are located as follows:

- 11a – Warehouse Dock – northwest corner of warehouse building
- 11b – Return/Fill Dock – northern portion of return and fill area
- 11c – Tank Farm Area – immediately north of tank farm

SWMU-12 (Mercury Lamps/Devices/Battery Storage Area (Inside SWMU-1)) is located along the northern wall of the container storage area in the warehouse building.

**Part II P.3 Prior/Current Releases**

Date	Material	Amt. (gallons)	Explanation
2/24/99	105 Solvent	30	Leaky drum on route truck in the north parking lot.
6/8/99	Perc	3	Drum tipped over in return/fill bay and spilled material into secondary containment
9/21/99	Compound Cleaning Liquid	5	Drum leaking in container storage area
2/8/01	Non-hazardous Waste Water	25	Drum leaking within containment area
8/10/01	Used Oil	20	3 <sup>rd</sup> party transporter blew a gasket seal while pumping oil in the tanker loading/unloading area.
7/16/09	Oily Water	30	Hose not secured properly and came loose during off-loading into oily water tanker trailer at back dock
8/13/09	Aqueous Cleaning Solution	15	While transferring material into a bin approximately 15 gallons spilled onto the return/fill bay floor
9/22/09	Antifreeze	15	Product antifreeze container punctured by forklift in the warehouse building spilling material into the containment trench.
12/28/09	Used Oil	1	Coupler came loose while off-loading and sprayed about 1 gallon of used oil onto the tank farm pad
2/21/11	Oily Water	5	Hose connection came loose while off-loading into the tanker trailer back dock containment area
3/13/12	Diesel Fuel	0.5	Fuel line under oil truck failed while off-loading on the tank farm pad
11/15/12	Used Oil	30	Connection failed at the valve due to the hose coupler not being secured and spilled 30 gallons of used oil onto the tank farm pad
4/16/13	Used Oil	10	Hose split while off-loading into used oil tank spilling 10 gallons of used oil onto tank farm pad.

***Part II***

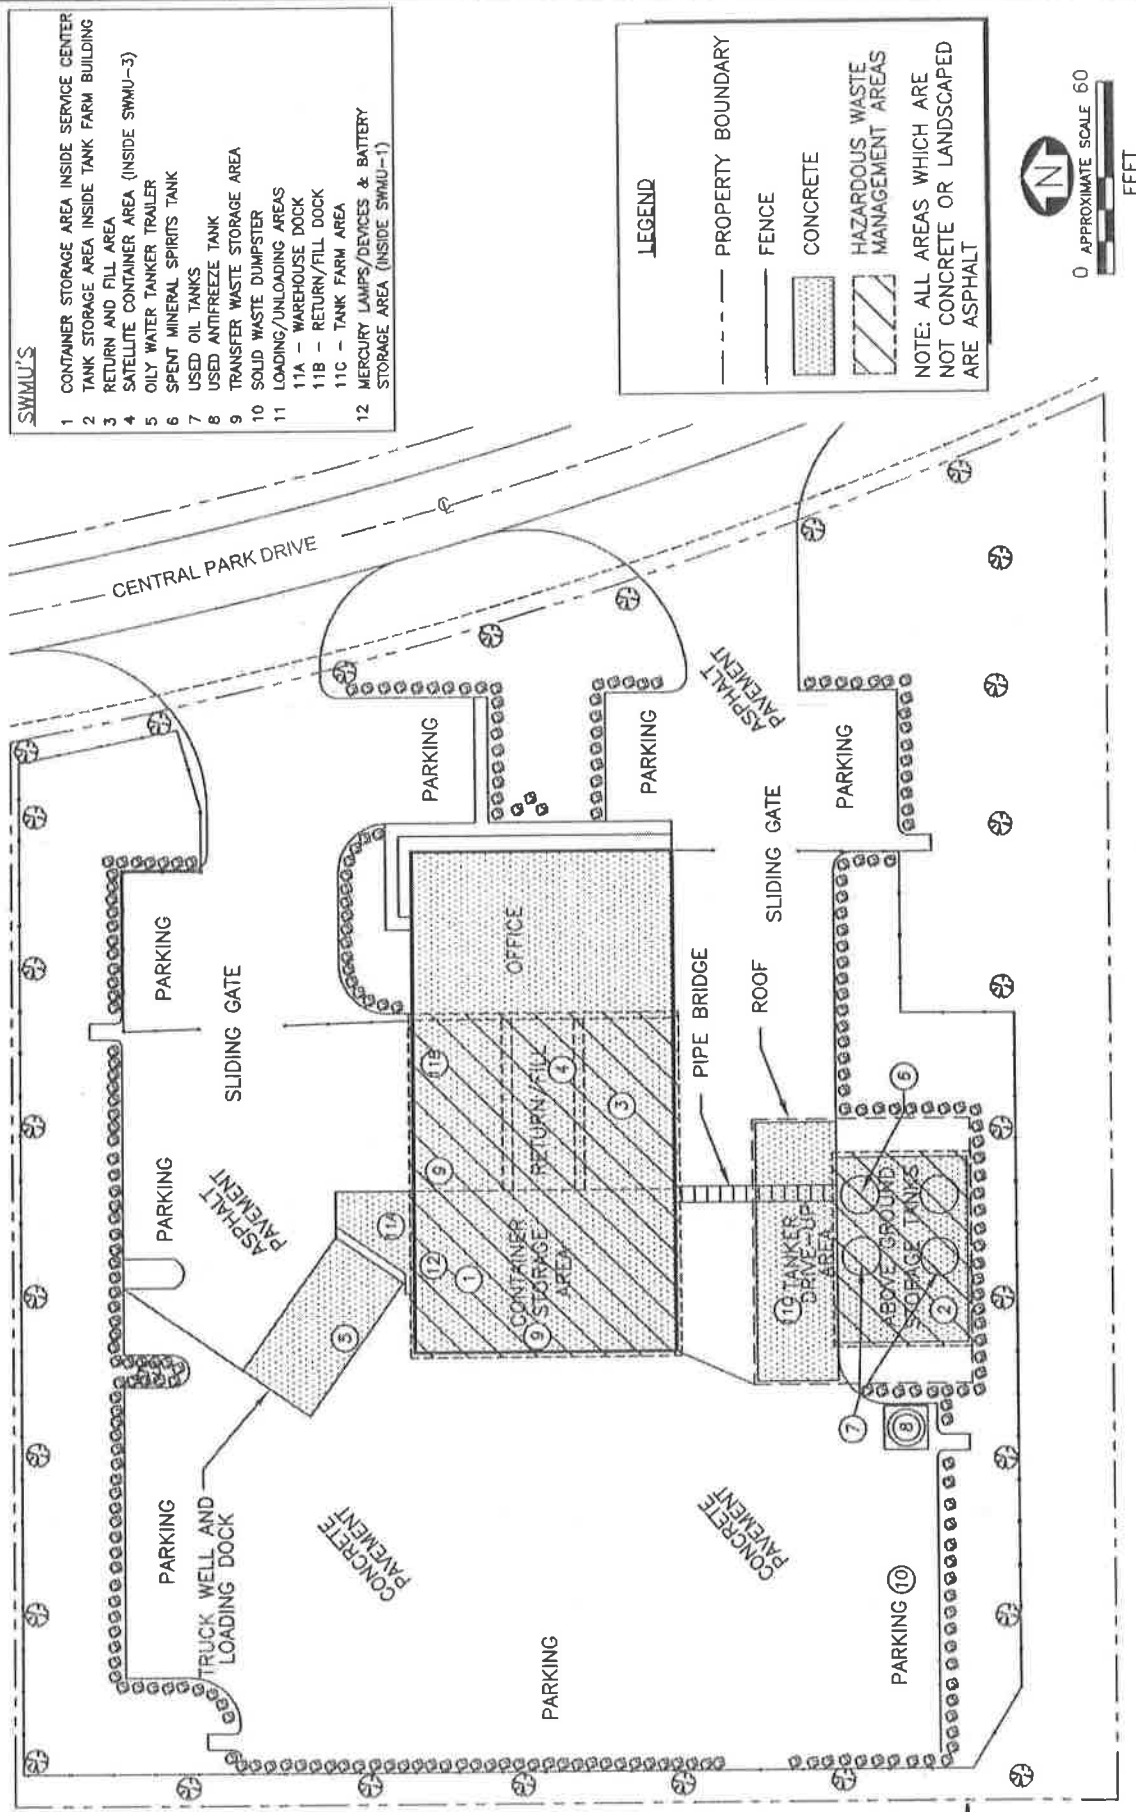

***Q. INFORMATION REQUIREMENTS FOR SOLID WASTE MANAGEMENT UNITS***

Part II.Q. of the Florida Department of Environmental Protection's (FDEP's) Application for a Hazardous Waste Permit outlines the information requirements for solid waste management units (SWMU's) at the facility. This section provides the required information.

A RCRA Facility Assessment Report, dated June 24, 1991, was completed by the Florida Department of Environmental Protection for the Safety-Kleen Sanford facility. In this report two SWMU's were identified. These SWMU's are listed in the current operating permit (22198-HO-007) along with ten additional SWMU's that were identified during the last permit renewal application in 2013. The complete list of SWMU's is found on the next page.

SWMU NUMBER	DESCRIPTION
1	Container Storage Area Inside Service Center
2	Tank Storage Area Inside Tank Farm
3	Return and Fill Area
4	Satellite Container Area (Inside SWMU-3)
5	Oily Water Tanker Trailer
6	Spent Mineral Spirits Tank
7	Used Oil Tanks
8	Used Antifreeze Tank
9	Transfer Waste Storage Area
10	Solid Waste Dumpster
11	Loading/Unloading Areas
11a	Warehouse Dock
11b	Return/Fill Dock
11c	Tank Farm Area
12	Mercury Lamps/Devices Storage Area (Inside SWMU-1)

FIGURE PART II-Q  
 LOCATIONS OF SOLID WASTE MANAGEMENT UNITS (SWMU)  
 SAFETY-KLEEN SYSTEMS, INC.  
 SANFORD, FLORIDA

**Part II**

**S. AIR EMISSION STANDARDS**

***AIR EMISSION STANDARDS FOR EQUIPMENT LEAKS***

The requirements of 40 CFR 264 Subpart BB – Air Emission Standards for Equipment Leaks apply to certain equipment associated with the used parts washer solvent storage tanks system. Figure 2.2-6 plots the facility layout with the locations of the hazardous waste management units. Equipment subject to Subpart BB requirements is included in the “above ground storage tanks ” shown in Figure 2.2-6. This equipment contains or contacts hazardous wastes with VOC concentrations > 10% by weight. The Subpart BB requirements apply to pumps, valves, flanges, etc., which are part of the used parts washer solvent storage tank system. Figure 11.1-1 shows the specific equipment items, which are considered to be in “heavy liquid service” for the purposes of Subpart BB. Compliance with the applicable sections of 40 CFR 264.1052 thru 1063 has been achieved by the implementation of the procedures outlined in Appendix D and other procedures detailed below.

***Implementation Schedule***

All facilities subject to these regulations were required to be in compliance by the date specified in the final rule.

***Schedule and Procedures For Inspections***

Pursuant to Subpart BB of 40 CFR Part 264 and 40 CFR 270.25, Safety-Kleen inspects all regulated units for leaks each business day. Inspections are completed electronically (CO Tank Sys BB Equipment Inspection), and a list of equipment inspected is found on Figure 11.1-2. If an issue arises with the electronic system, they will be completed on paper using this form. All valves, pumps, and flanges are visually inspected. The inspection items have been properly tagged in accordance with 40 CFR 264.1050(d) and are inventoried on the environmental piping schematic diagrams included in Figure 11.1-1. In the event that a leak is detected, repairs will be implemented in accordance with the applicable provisions of Subpart BB (first attempt at repair within 5 days; repair completed or equipment placed “out of service” within 15 days. For such repairs, a “Leak Detection and Repair Record” will be completed (see Figure 11.1-3 for an example.

Due to the inherent properties of the waste parts washer solvent stored in the tank, the use of a screening device such as a photoionization detector (PID) is impractical. The liquids are heavy and have low vapor pressures, therefore a release would be visible in a liquid phase rather than a vapor. The parts washer solvent has a maximum of 2,000 ppm concentration in the vapor phase.

*Alternate Control Devices*

No alternate control devices are in use at this facility.

*Documentation Of Compliance*

*Pumps in Light Liquid Service (40 CFR 264.1052)*

Safety-Kleen manages parts washer solvent (mineral spirits) that has vapor pressure less than 0.3 kilopascals at 20 degrees C. Therefore pursuant to 40 CFR 264.1030, these materials are classified as heavy liquids. The existing pumps that manage hazardous wastes at the Sanford facility are identified and listed for use in heavy liquid service. Therefore, the Sanford facility does not have any pumps that are in light liquid service subject to the requirements of 40 CFR 264.1052.

*Compressors (40 CFR 264.1053)*

The facility does not have any compressors that are in contact with organic chemicals. Therefore, 40 CFR 264.1053 is not applicable.

*Pressure Relief in Gas/Vapor Service (40 CFR 264.1054)*

The facility does not have any pressure relief subject to the requirements of 40 CFR 264.1054.

***Sampling Connecting Systems (40 CFR 264.1055)***

The facility does not have any sampling connecting systems or in situ sampling systems.

***Open-Ended Valves or Lines (40 CFR 264.1056)***

Safety-Kleen has identified the location of each open-ended valve and line and included it in the inspection record. The open-ended valves and lines that are subject to the requirements of 40 CFR 264.1056 are identified in the facility's environmental piping schematic drawing (Figure 11.1-1). This equipment is either equipped with caps, second valves, or double block and bleed system. A cap, blind flange, plug, or second valve shall seal the open end at all times except during operations requiring hazardous waste stream flow through the open-ended valve or line. Each open-ended valve or line equipped with a second valve shall be operated in a manner such that the valve on the hazardous waste stream end is closed before the second valve is closed. When a double block and bleed system is being used, the bleed valve or line may remain open during operations that require venting the line between the block valves.

***Valves in Gas/Vapor Service or in Light Liquid Service (264.1057)***

All existing valves that come in contact with hazardous wastes are in heavy liquid service. Therefore, they are not subject to the requirements of 40 CFR 264.1057. If their use is changed to light liquid service, the valves will be monitored for leaks using a portable organic vapor analyzer in accordance with Method 21.

***Pumps and Valves in Heavy Liquid Service, Pressure Relief Devices in Light Liquid or Heavy Liquid Service, and Flanges and Other Connectors (40 CFR 264.1058)***

At the present time, the pumps, valves, flanges, and other connectors at the Sanford facility are used for heavy liquid service. As defined in 40 CFR 264.1031, the mineral spirits solvents managed at the facility are considered to be heavy liquid because the solvents have a vapor pressure less than 0.3 kilopascals at 20° C. Furthermore, no single contaminant is present in the wastes that has vapor pressure greater than 0.3 kilopascals in concentrations in excess of 20% by weight. In addition, the wastes presently managed in the equipment at the Sanford facility have a maximum of 2,000 ppm concentration in the vapor phase. Therefore, a portable organic vapor analyzer will not detect leaks at 10,000 ppm and a leak will be observed based on a visible liquid leak rather than by a portable organic analyzer. The first attempt at repair will be made no later than five calendar days after each leak is detected. Pursuant to the requirements of 40 CFR 264.1058, if a visual leak is observed, the affected equipment will be repaired no later than 15 days after it is detected. Whenever a leak is detected as specified in 40 CFR 264.1064 the following will apply:

- A weatherproof and readily visible identification attached to the leaking equipment shall be marked with the following information: equipment identification number, date that evidence of a potential leak was found in accordance with 264.1058(a), and date leak was detected.
- The identification on equipment, except on a valve, may be removed after it has been repaired.
- The identification on a valve may be removed after it has been monitored for two successive months as specified in 264.1057(c) and no leak has been detected during those two months.

Whenever a leak is detected as specified in 40 CFR 264.1058, the following information shall be recorded, as deemed appropriate, in an inspection log and shall be kept as part of the facility operating record:

- The instrument, operator, and equipment ID numbers.
- The date that evidence of a potential leak was found in accordance with 264.1058(a).
- The date the leak was detected and the dates of each attempt to repair the leak.
- Repair methods applied in each attempt to repair the leak.
- “Repair delayed” and the reason for the delay if a leak is not repaired within 15 calendar days after discovery of the leak.
- Documentation supporting the delay of repair of a valve in compliance with 264.1059(c).
- The signature of the owner or operator (or designate) whose decision it was that repair could not be effected without a hazardous waste management unit shutdown.
- The expected date of successful repair of the leak, if the leak is not repaired within 15 calendar days.
- The date of successful repair of the leak.

***Recordkeeping Requirements***

Pursuant to the requirements of 40 CFR 264.1064, Safety-Kleen has identified all affected equipment by number and location (Equipment Schedule) as shown in Figure 11.1-1.

The following records will be maintained at the Sanford Branch and maintained as part of the facility’s operating record.

- Type of equipment; valve, pump, flange, etc.
- Service; light liquid or heavy liquid.
- Percent-by-weight is not necessary for the equipment because the facility manages wastes that are nearly 100% organic by weight.
- Method of compliance; daily inspections.
- ID on the equipment, if they are found leaking, will be implemented.
- Leak monitoring results and any repairs conducted at the facility.

***Closed-Vent Systems and Control Devices (40 CFR 264.1060)***

Since neither a closed vent system nor a control device is required for, or as part of, the equipment ancillary to the facility's hazardous waste storage tank (equipment subject to Subpart BB), demonstrations of compliance with applicable design, operation and maintenance specifications are not required. The Sanford facility will maintain records as part of the facility's operating record that indicate the name and ID of each equipment (i.e., pumps, valves, flanges, open-ended valves, etc.) at the facility. The record will include the type of chemicals managed in each equipment (i.e., light liquid, heavy liquid, etc.) and the state of the chemicals (i.e., gas, vapor, liquid, etc.) and any leaks detected (i.e., visual, >10,000 ppm, etc.) and the date and type of repair performed to repair the leaking equipment. Since Safety-Kleen manages organic chemicals that are nearly 100% by weight organic, it is not required to maintain in the records the concentration of organic chemicals in the waste stream (40 CFR 264.1064(b)(1)(iv)).

***AIR EMISSION STANDARDS FOR TANKS, AND CONTAINERS***

Safety-Kleen's Sanford facility manages wastes that range in Volatile Organic concentrations up to 100%. Therefore, all wastes managed in containers and in storage tanks are handled as being subject to 40 CFR 264 Subpart CC requirements based on the knowledge of the wastes managed at the facility. Therefore, no analytical waste determination is required.

***Supart CC Tank Standards (40 CFR 265.1084)***

The Safety-Kleen Sanford facility manages hazardous wastes in a tank system that consists of one 20,000-gallon storage tank. The tank in this system is subject to Subpart CC requirements as a Level 1 Tank based on tank dimensions and maximum vapor pressure of volatile organic materials managed in this tank (see following table). A list of tank, tank dimensions and maximum vapor pressure of volatile organics managed in tanks subject to Level 1 Tank controls is provided in the following table.

**Applicability of Standards Level 1 Tanks**

Tank Capacity	Maximum Vapor Pressure
> 151 cubic meters (39800 gallons)	< 5.2 kPa (0.76 psia)
> 19800 gallons < 39800 gallons	27.6 kPa (4.05 psia)
< 19800 gallons	76.6 kPa (11.26 psia)

Tanks that meet the above size and vapor pressure limits and that are not heated to a temperature that would increase the vapor pressure of the materials above these limits are required to meet Level 1 Tank Standards. See Table 11.2-1 for a summary of the tank at the Sanford facility subject to the requirements of Subpart CC, and the applicable controls.

***Level 1 Tank Requirements (40 CFR 264.1084(c))***

Safety-Kleen spent parts washer solvent has a vapor pressure of less than 0.3 kilopascals at 20° C. The tank used for storing this waste has a capacity of 20,000 gallons. A complete description of the tank system is found in Part II C. Waste material stored in these tanks is spent Safety-Kleen Premium Gold 150 Solvent. The storage tanks meeting Level 1 requirements are equipped with fixed roofs with the following specifications:

- The fixed roof and its closure devices form a continuous barrier over the entire surface area of the hazardous waste in the tank.
- There are no visible cracks, holes, gaps, or other open spaces between roof section and the tank wall.
- Each opening in the fixed roof is equipped with a closure device designed to operate such that when the closure device is secured in closed position, there are no visible cracks, holes, gap, or other open spaces in the closure device or between the perimeter of the opening and the closure device or connected to a control device (control is not required for Level 1 Tanks).

Inspection Requirements for Level 1 Tanks are as follows:

The fixed roof and its closure devices are visually inspected to check for defects that could result in air emissions. Defects include, but are not limited to, visible cracks, holes or gaps in the roof sections; broken, cracked, or damaged seals or gaskets on closure devices; broken or missing hatches, access covers, caps, or other closure devices. A description of inspections and example log for tanks can be found in Part II C.

***Level 2 Tanks (40 CFR 265.1084(d))***

There are no level 2 tanks at this facility.

***Subpart CC Container Standards (40 CFR 264.1086)***

This section is applicable to containers that are greater than 26 gallons that are used to manage hazardous wastes with greater than 500 ppm volatile organic contents. Hazardous waste containers that are filled (generated) at the facility as well as hazardous waste containers that are received from off site are subject to this rule. Table 11.2-2 provides a summary of the areas, and types of containers managed, at the Sanford facility for which Subpart CC is applicable.

***Level 1 Containers (40 CFR 265.1086(c))***

Containers greater than 26 gallons but less than 119 gallons and containers greater than 119 gallons used in heavy material service ( $<0.038$  psia) are to be controlled in accordance with one of the following Level 1 container standards as follows:

- Containers that meet DOT standards are in compliance with Subpart CC Level 1 container design standards. Safety-Kleen drums meet DOT's standards; or
- A container equipped with cover and closure devices that form a continuous barrier over the container openings such that when the cover and closure devices are secured in the

closed position there are no visible holes, gaps, or other open spaces into the interior of the container. The cover may be a separate cover installed on the container such as a lid on a drum or a tarp on a roll-off box; or

- An open-top container in which an organic-vapor-suppressing barrier is placed on or over the hazardous waste in the container such that no hazardous waste is exposed to the atmosphere.

***Level 1 Container Operating Requirements (40 CFR 264.1086(c)(3))***

Whenever a hazardous waste is in a container using Level 1 controls, the covers shall be maintained in closed position except as follows:

- Adding hazardous waste or other materials to the container if the container is filled in one continuous operation, the container is closed upon conclusion of the filling operation. In the case of discrete or batch filling the container is to be closed:
  - a) upon filling the container to the intended final level;
  - b) the completion of a batch loading after which no additional waste will be added within 15 minutes;
  - c) the person performing the loading operation leaving the immediate vicinity of the container; or
  - d) the shutdown of the process generating waste being added to the container.
- Removing hazardous waste from the container: When discrete quantities of hazardous waste are removed from the container, covers shall be promptly secured upon completion of a batch removal after which no additional material will be removed from the container within 15 minutes or the person performing the unloading operation leaves the immediate vicinity of the container. RCRA empty containers may be open to the atmosphere at any time.
- Sampling wastes, measuring depth or quantity of wastes: Containers may be opened when sampling and/or measuring hazardous wastes, as well as adding or removing hazardous wastes from them. Covers must be replaced and secured on containers once

such activities are completed.

***Level 1 Container Inspection Requirements***

All Level 1 Containers that are not emptied upon receipt at the facility, are inspected upon arrival and each day thereafter until the container is transferred to a recycle center. Each Level 1 Container and its cover and closure devices are inspected for visible cracks, holes, gaps, or other open spaces. No container remains at the facility over 1 year. If a defect is detected for a container, cover, or closure devices, a repair shall be attempted within 24 hours after detection, and repair shall be completed as soon as possible, but no later than 5 calendar days. The container will be over-packed in a DOT approved container as a means of repair. A description of the types of inspections and example logs for containers can be found in Part II B.

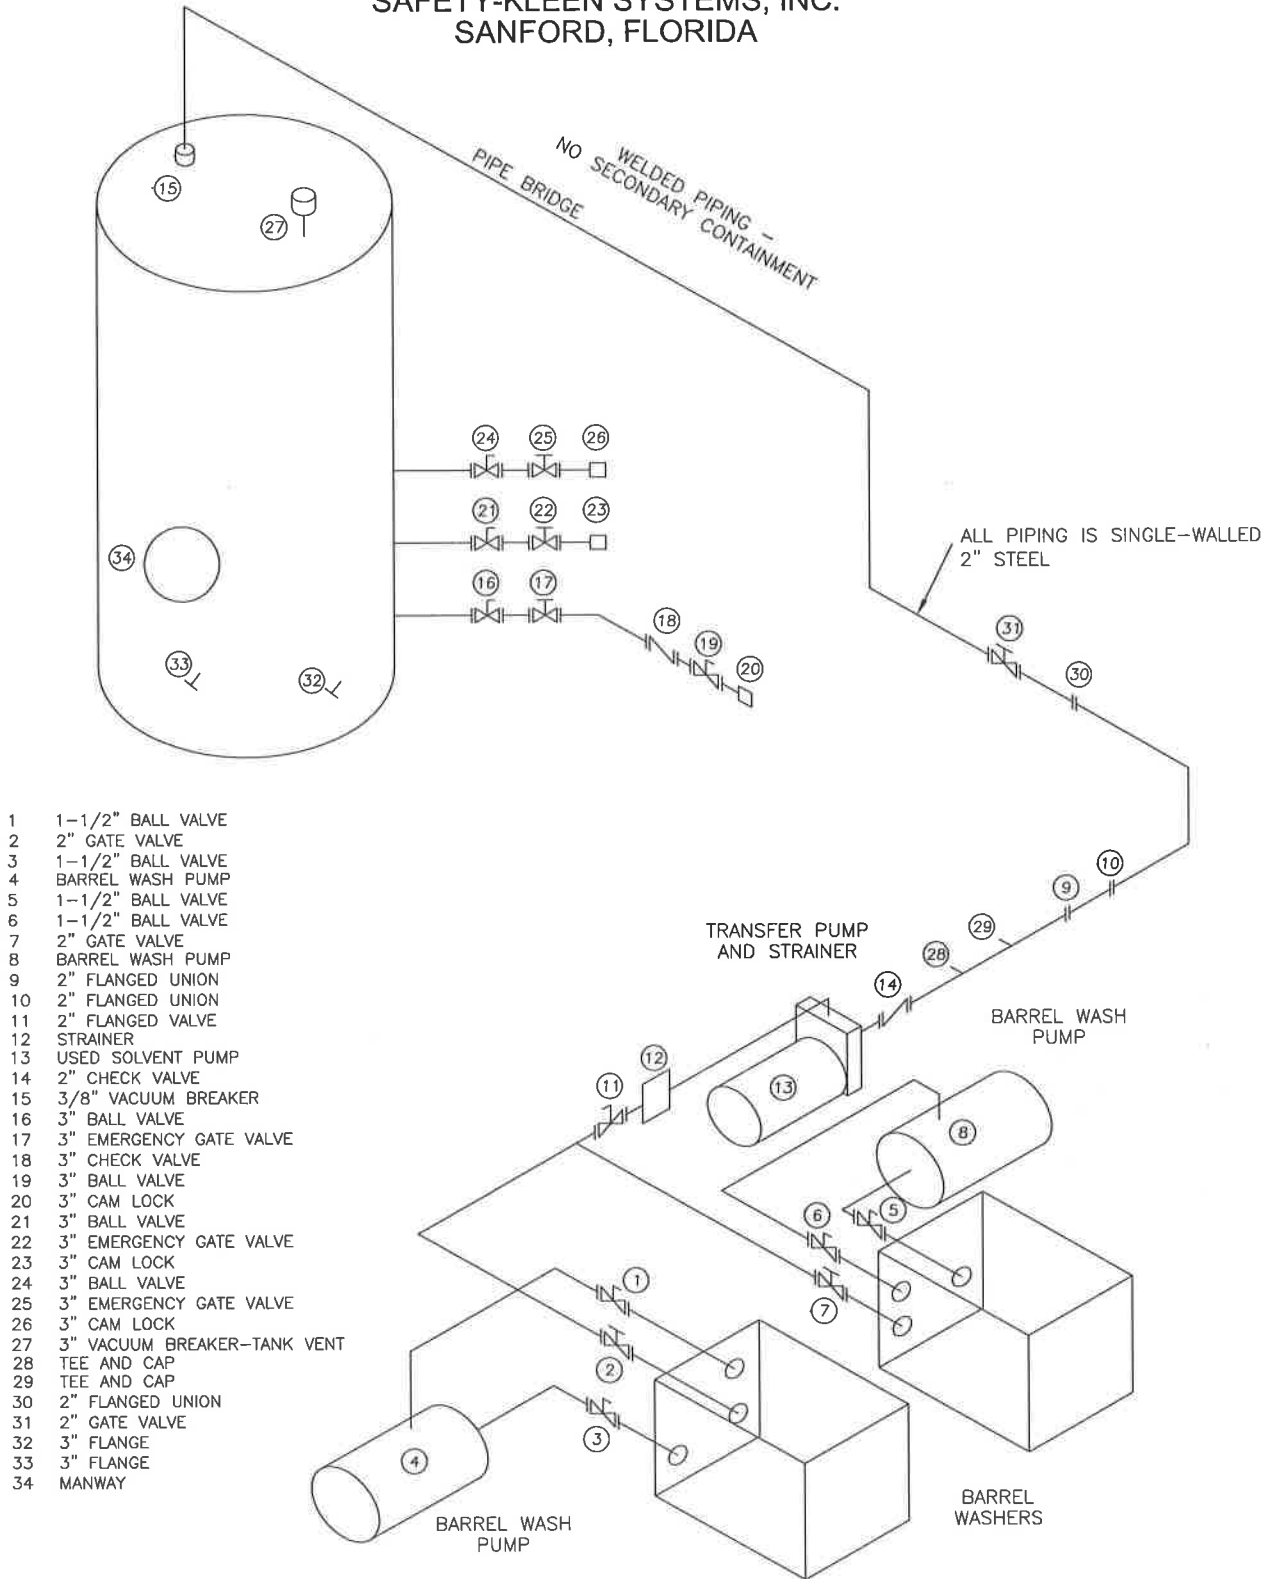

***Level 2 Containers (264.1086(d))***

Hazardous waste containers with design capacity greater than 119 gallons and that are in light material service are subject to Level 2 container standards. These include totes, roll-off boxes that are greater than 119 gallons in capacity, and bulk tankers and rail car tankers. Level 2 containers are not stored at this facility, therefore 40 CFR 264.1087(d) does not apply at this location. However, these types of containers may undergo 10-day transfer at the facility, but since they will be considered “still in the course of transportation” Subpart CC will not be applicable.

***Documentation of Compliance***

Safety-Kleen prepared a written compliance plan for those units subject to Subpart CC, and instituted the plan on December 6, 1996. A copy of Subpart CC Compliance Plan is included in Appendix C.

Subpart CC Control Options

*Tanks*

1. These tanks shall comply with Tank Level 1 controls which require tanks to have a fixed roof with no visible cracks, holes, gaps, or other spaces in accordance with 40 CFR 264.1084(c). The tank shall be visually inspected for defects prior to the tank becoming subject to these requirements and at least once a year thereafter [40 CFR 264.1084(c)].
2. These tanks are fixed roof tanks equipped with an internal floating roof and shall comply with Tank Level 2 controls in accordance with 40 CFR 264.1084(e). The internal floating roof shall be visually inspected for defects at least once every twelve months after initial fill unless complying with the alternative inspection procedures in 40 CFR 264.1084(e)(3)(iii). [40 CFR 264.1084.(d)(1)]
3. These tanks are equipped with an internal floating roof and shall comply with Tank Level 2 controls in accordance with 40 CFR 264.1084(f). The external roof seal gaps shall be measured in accordance with procedures contained in 40 CFR 264.1084(f)(3)(i)(A) within 60 days and at least once every 5 years thereafter. The external floating roof shall be visually inspected for defects at least once every 12 months after initial fill. [40 CFR 264.1084(d)(2)]
4. These tanks are vented through a closed-vent system to control device and shall comply with Tank Level 2 controls in accordance with 40 CFR 264.1084(g). The tank shall be equipped with a fixed roof and closure devices which shall be visually inspected for defects initially and at least once every year. The closed-vent system and control device shall be inspected and monitored in accordance with 40 CFR 264.1087. [40 CFR 264.1084(d)(3)]
5. These tanks are pressure tanks which shall comply with Tank Level 2 controls in accordance with 40 CFR 264.1084(h). [40 CFR 264.1084(d)(4)]
6. These tanks are located inside an enclosure that is vented through a closed-vent system to an enclosed combustion control device and shall comply with Tank Level 2 controls in accordance with 40 CFR 264.1084(i). The closed-vent system and control device shall be inspected and monitored in accordance with 40 CFR 264.1087 [40 CFR 264.1084(d)(5)]
7. These tanks have covers which have been specified as “unsafe to inspect and monitor” and shall comply with the requirements of 40 CFR 264.1084(l)(1) [40 CFR 264.1084(f) & (g)]

Table 11.2-3

## Subpart CC Control Options

## Containers

8. These containers have a design capacity greater than 0.1 m<sup>3</sup> and less than or equal to 0.46 m<sup>3</sup> and meet the applicable US DOT regulations under the Container Level 1 standards. The container shall be visually inspected for defects at the time the container first manages hazardous waste or is accepted at a facility. If a container remains at a facility for 1 year or more, it shall be visually inspected for defects at least once every twelve months. [40 CFR 264.1086(c)(4)(ii) & (d)(4)(ii)]
9. These containers have a design capacity greater than 0/1 m<sup>3</sup> and less than or equal to 0.46 m<sup>3</sup> and are equipped with a cover and closure devices which form a continuous barrier over container openings. The container and its cover and closure devices shall be visually inspected for defects at the time the container first manages hazardous waste or is accepted at a facility. If a container remains at a facility for 1 year or more, it shall be visually inspected for defects at least once every twelve months. [40 CFR 264.1086(b)(1)(i) & (c)(1)(i)]
10. These containers have a design capacity greater than 0/1 m<sup>3</sup> and less than or equal to 0.46 m<sup>3</sup> and are open-top containers in which an organic-vapor surpressor is placed on or over the hazardous waste in a container. The container and its cover and closure devices shall be visually inspected for defects at the time the container first manages hazardous waste or is inspected for defects at least once every twelve months. [40 CFR 264.1086(b)(1)(i) & (c)(1)(iii)]
11. These containers have a design capacity greater than 0.46 m<sup>3</sup>, are not in light material service and meet the applicable US DOT regulations under Container Level 1 standards. The container shall be visually inspected for defects at the time the container first manages hazardous waste or is accepted at a facility. If a container remains at a facility for 1 year or more, it shall be visually inspected for defects at least once every twelve months. [40 CFR 264.1086(b)(1)(ii) & (c)(1)(i)]
12. These containers have a design capacity greater than 0.46 m<sup>3</sup>, are not in light material service and are equipped with a cover and closure devices which form a continuous barrier over container openings. The container and its cover and closure devices shall be visually inspected for defects at the time the container first manages hazardous waste or is accepted at a facility. If a container remains at a facility for 1 year or more, it shall be visually inspected for defects at least once every twelve months. [40 CFR 264.1086(b)(1)(ii) & (c)(1)(ii)]
13. These containers have a design capacity greater than 0.46 m<sup>3</sup>, are not in light material service and are open-top containers in which an organic-vapor surpressor is placed on or over the hazardous waste in a container. The container and its cover and closure devices shall be visually inspected for defects at the time the container first manages hazardous waste or is accepted at a facility. If a container remains at a facility for 1 year or more, it shall be visually inspected for defects at least once every twelve months. [40 CFR 264.1086(b)(1)(ii) & (c)(1)(iii)]
14. These containers have a design capacity greater than 0.46 m<sup>3</sup>, are in light material service and meet the applicable US DOT regulations under Container Level 2 standards. The container shall be visually inspected for defects at the time the container first manages hazardous waste or is accepted at a facility. If a container remains at a facility for 1 year or more, it shall be visually inspected for defects at least once every twelve months. [40 CFR 264.1086(b)(1)(iii) & (d)(4)(ii)]

Table 11.2-3

Subpart CC Control Options

15. These containers have a design capacity greater than 0.46 m<sup>3</sup>, are in light material service and operate with no detectable organic emissions as defined in 40 CFR 265.1081. The container and its cover and closure devices shall be visually inspected for defects at the time the container first manages hazardous waste or is accepted at a facility. If a container remains at a facility for 1 year or more, it shall be visually inspected for defects at least once every twelve months. [40 CFR 264.1086(b)(1)(iii) & (d)(1)(ii)]
16. These containers have a design capacity greater than 0.46 m<sup>3</sup>, are in light material service and that have been demonstrated within the preceding 12 months to be vapor tight using 40 CFR Part 60, Appendix A, Method 27. The container and its cover and closure devices shall be visually inspected for defects at the time the container first manages hazardous waste or is accepted at a facility. If a container remains at a facility for 1 year or more, it shall be visually inspected for defects at least once every twelve months. [40 CFR 264.1086(b)(1)(iii) & (c)(1)(i)]
17. These containers have a design capacity greater than 0.1 m<sup>3</sup> that are used for treatment of a hazardous waste by a waste stabilization process and are vented directly through a closed-vent system to a control device in accordance with 40 CFR 264.1086(e)(2)(ii). The closed-vent system and control devices shall be inspected and monitored as specified in 40 CFR 264.1087. [40 CFR 264.1086(b)(2) & (e)(1)(i)]
18. These containers have a design capacity greater than 0.1 m<sup>3</sup> that are used for treatment of a hazardous waste by a waste stabilization process and are vented inside an enclosure which is exhausted through a closed-vent system to a control device in accordance with 40 CFR 264.1086(e)(2)(i) & (ii). The closed-vent system and control devices shall be inspected and monitored as specified in 40 CFR 264.1087. [40 CFR 264.1086(b)(2) & (e)(1)(ii)]

Parts washer solvent tank bottoms are SK-generated wastes from the cleanout of solvent storage tanks.\*\* Safety-Kleen does not accept this waste stream from non-SK generators.

# Statistical Analysis of Annual Waste Characterization Data

Prepared by  
Robert D. Gibbons Ph.D.

for

Safety Kleen  
July 23, 1998

## 1 Introduction

Since 1990, Safety-Kleen has undertaken a major analytical study each year to document the contaminants in some of its most common waste streams to determine which TCLP waste codes should appear on the manifest for that waste. This Annual Waste Recharacterization Program is both expensive and extensive. Upon review, it appeared that regulatory agency instructions for how to interpret the data might not have been in line with current policy, as reflected in SW846. The general approach is based on development of an upper 90% confidence limit<sup>1</sup> for the true concentration of each constituent, which can in turn be directly compared to regulatory standards to determine if the waste code should or should not be added to a particular waste stream (e.g., Premium Gold Parts Washer Solvent 150). The regulatory basis for this type of comparison stems from U.S. EPA SW846 Chapter 9 (September 1986) guidance on determining if a waste stream is hazardous.<sup>2</sup> The primary complicating feature is the presence of large numbers of nondetects which raises serious question regarding the use of the parametric approach. In light of this concern, nonparametric methods are used throughout.<sup>3</sup> Specifically, following U.S. EPA SW846, we construct a nonparametric 90% upper confidence limit (UCL) for the 50<sup>th</sup> percentile of the distribution (i.e., median), which is equivalent to the 90% UCL for the mean in the case of a symmetric distribution such as the normal distribution.

---

<sup>1</sup>"Consequently, the CI employed to evaluate solid wastes is, for all practical purposes, a 90% interval." U.S. EPA SW846 (1986) chapter 9 page 6.

<sup>2</sup>"The upper limit of the CI for  $\mu$  is compared with the applicable regulatory threshold (RT) to determine if a solid waste contains the variable (chemical contaminant) of concern at a hazardous level. The contaminant of concern is not considered to be present in the waste at a hazardous level if the upper limit of the CI is less than the applicable RT. Otherwise the opposite conclusion is reached. "U.S. EPA SW846 (1986) chapter 9 page 3

<sup>3</sup>"If the data do not adequately follow the normal distribution even after logarithm transformation, a nonparametric confidence interval can be constructed. This interval is for the median concentration (which equals the mean if the distribution is symmetric)." U.S. EPA Statistical Analysis of Ground-Water Monitoring Data at RCRA Facilities, April 1989, page 6-8

## 2 Method

Following Chapter 9 of SW846, the 90% UCL for the mean concentration obtained from a series of  $n$  representative samples is to be compared to the appropriate regulatory standard to determine if the waste stream is hazardous. If the UCL exceeds the standard, the waste stream is considered hazardous. The applicant must compute the UCL that is appropriate for the specific distributional form of the data. Given the large number of nondetects for many of the constituents, it is difficult if not impossible to clearly identify the underlying distributional form of the data. In this case, the U.S. EPA guidance indicates that a nonparametric alternative should be used.<sup>4</sup>

Nonparametric confidence limits are derived as follows. Given an unknown  $P \times 100$ th percentile of interest (e.g. the 50th percentile or median),<sup>5</sup> where  $P$  is between 0 and 1, and  $n$  concentration measurements, the probability that any randomly selected concentration measurements being less than the  $P \times 100$ th percentile is simply  $P$  and the probability of exceeding the  $P \times 100$ th percentile is  $1 - P$ . In light of this, the number of sample values falling below the  $P \times 100$ th percentile out of a set of  $n$  measurements follows a Binomial distribution with parameters  $n$  and  $P$ .

The connection with the Binomial distribution can be used to determine an interval formed by a given pair of order statistics (i.e. ranked values) that will contain the percentile of interest, in this case the 50th percentile. Similarly, the Binomial distribution can also be used in constructing an upper limit (i.e. one-sided) for the percentile (e.g. a 90% upper confidence limit for the 50th percentile of the distribution). The computational formula for the cumulative binomial distribution  $B(x;n,p)$ , representing the probability of getting  $x$  or fewer successes in  $n$  trials with success probability  $p$  is given by

$$Bin(x;n,p) \equiv \sum_{i=0}^x \binom{n}{i} p^i (1-p)^{n-i}$$

To draw inference regarding the  $P = 50$ th percentile, we set  $p = .5$  in the previous equation. For a one-sided UCL we compute

$$1 - \alpha = 1 - Bin(U - 1; n, .5)$$

beginning from the sample median. We then increase  $U$  by one until in this case  $1 - \alpha$  is equal to at least .90. The smallest value of  $U$  that provides  $1 - \alpha \geq .9$  is then the order statistic (i.e., ranked value) that is the nonparametric 90% UCL for the 50th percentile of the distribution.

---

<sup>4</sup> "If the data do not adequately follow the normal distribution even after logarithm transformation, a nonparametric confidence interval can be constructed." U.S. EPA, 1989

<sup>5</sup> "This interval is for the median concentration (which equals the mean if the distribution is symmetric)." U.S. EPA (1989), page 6-8

### 3 Illustration

Consider the following most recent 50 data values for PCE (D039) obtained from Premium Gold Parts Washer Solvent-150.

Table 1  
Premium Gold Parts Washer Solvent - 150  
50 most recent samples in order of increasing concentration  
in ppm

<50.000	<1.000	<0.100	<0.100	<0.100
<0.100	<0.100	<0.100	<0.100	<0.100
<0.100	0.110	0.200	0.200	0.220
0.230	0.260	0.510	0.870	0.880
1.000	1.300	1.500	1.800	2.000
2.700	2.700	3.300	5.400	7.000
<b>7.100</b>	12.000	12.300	17.200	19.700
20.000	20.000	21.200	23.600	32.300
51.100	52.500	136.000	211.000	286.000
508.000	635.000	771.000	940.000	2810.000

For  $n = 50$ ,  $p = .5$  and  $1 - \alpha = .9$ , we find that  $U = 31$  is the smallest order statistic that provides 90% confidence or more ( $1 - \alpha = .941$ ). As such, we select the 31st largest value in Table 1 which is 7.1 ppm as our UCL. Since 7.1 ppm is larger than the standard of 0.7 ppm, then the D039 waste code is required for this waste stream.

### 4 Conclusion

The data in the following package have been interpreted using the methodology described. The waste codes for each stream were determined as those parameters for which the 90% UCL for the median concentration was above the regulatory limit, based on review of the last two years of samples or the most recent 50 samples, whichever yielded the larger number of samples to consider.

MATRIX	PARAMETER	LAB ID	RESULT	RANKED DATA	UNITS	QUALIFIER	REPORTING LIMIT	Uth VALUE	COUNT	FACILITY	YEAR

## Procedure for Compliance with RCRA Subparts BB and CC

---

### OPERATIONS

Division/Department: Operations  
Contact: Jane Spetalnick  
Jane.spetalnick@safety-kleen.com  
Procedure: O220-005  
Revision: 3  
Revision Date: **October 10, 2017**  
Supersedes: April 25, 2012  
Issue Date: November 3, 2004  
Page: 1 of 12  
Approved: Bill Ross

### **Purpose:**

The purpose of this Branch Operating Guideline is to provide general guidelines for complying with the requirements for controlling emissions from equipment leaks (Subpart BB) and controlling emissions from containers, tanks, surface impoundments and miscellaneous units (Subpart CC).

### **Scope:**

This procedure applies to all U.S. Safety-Kleen Branches that are permitted Treatment, Storage, and Disposal Facilities (TSDFs).

### **Responsibilities:**

<b>Branch General Manager (BGM)</b>	Branch General Managers are responsible for following these procedures. BGMs also assist the EHS Manager in all compliance issues as they relate to the branch.
<b>Environment Health and Safety Managers (EHS Manager)</b>	EHS Managers are responsible for understanding all federal, state, and local regulatory issues pertaining to maintaining branch compliance with the control of emissions. EHS Managers conduct routine inspections and training to ensure branch compliance with Subparts BB and CC compliance.

### **Definitions:**

<b>Average Volatile Organic Concentration or average VOC</b>	Means the mass-weighted average volatile organic concentration of a hazardous waste as determined in accordance with the requirements of 40 CFR 265.1084.
<b>Closed-vent system</b>	A system that is not open to the atmosphere and that is composed of piping, connections, and necessary, flow-inducing devices that transport gas or vapor from a piece or pieces of equipment to a control device.

---

## Procedure for Compliance with RCRA Subparts BB and CC

---

<b>Closure device</b>	Means a cap, hatch, lid, plug, seal, valve, or other type of fittings that blocks an opening in a cover such that when the device is secured in the closed position it prevents or reduces air pollutant emissions to the atmosphere (Example: a hinged access lid or hatch)
<b>Connector</b>	Any flanged, screwed, welded, or other joined fittings used to connect two pipelines or a pipeline and a piece of equipment. For the purposes of reporting and recordkeeping, connector means flanged fittings that are not covered by insulation or other materials that prevent location of the fittings.
<b>Equipment</b>	Each valve, pump, compressor, pressure relief device, sampling connection system, opened-ended valve or line, or flange, or any control devices or systems required by Subpart BB.
<b>In heavy liquid service</b>	Means that the piece of equipment is not in gas/vapor service or in light liquid service (Example: mineral spirits is a heavy liquid)
<b>In light liquid service</b>	Means that the piece of equipment containers or contacts a waste stream where the vapor pressure of one or more of the components in the stream is greater than 0.3 kilopascals (kPa) at 20°C, the total concentration of the pure components having a vapor pressure greater than 0.3 kPa at 20°C is equal to or greater than 20 percent by weight and the fluid is a liquid at operating conditions (Example: paint thinner is a light liquid)
<b>Level 1 Container</b>	≤ 122 gallons, Storage of any hazardous; no waste stabilization or >122 gallons, "Not in light material service" (See Subpart BB section of this BOG for Light Material Service definition); no waste stabilization
<b>Level 2 Container</b>	>122 gallons, "In light material service," no waste stabilization
<b>Level 3 Container</b>	>26.4 gallons, Stabilization of hazardous waste
<b>Malfunction</b>	Means any sudden, infrequent, and not reasonably preventable failure of air pollution control equipment, process equipment, or a process to operate in a normal or unusual manner. <b>Note:</b> Failures that are caused in part by poor maintenance or careless operation are not malfunctions.
<b>Maximum Organic Vapor Pressure</b>	Means the sum of the individual organic constituent partial pressure exerted by the material contained in a tank, at the maximum vapor pressure-causing conditions (i.e., temperature, agitation, pH effects of combining wastes, etc.) reasonably expected to occur in the tank.
<b>Open-ended valve or line</b>	Any valve, except pressure relief valves, have one side of the valve seat in contact with the process fluid and one side open to the atmosphere, either directly or through open piping.

---

## Procedure for Compliance with RCRA Subparts BB and CC

---

### Point of waste origination

- (1) When the facility owner or operator is the generator of the hazardous waste, point of waste origination means the point where a solid waste is produced by a system, process, or waste management unit is determined to be a hazardous waste as defined by 40 CFR Part 261.
- (2) When the facility owner and operator is not the generator of the hazardous waste, point of the waste origination means the point where the owner or operator accepts delivery or takes possession of the hazardous waste.

### Related Documents:

Attachment A	Example daily Subpart BB Inspection Form
Attachment B	Example Leak Detection and Repair Form
Attachment C	Example Branch Daily Inspection Form (tanks and containers)
Attachment D	Example Subpart CC Annual Tank Inspection (including difficult Subpart BB tagged fittings at tops of tanks).

### Overview:

Procedures for compliance with both Subparts BB and CC are covered in the BOG.

Standards have been promulgated limiting organic emissions resulting from equipment leaks at new and existing hazardous waste treatment, storage and disposal facilities (TSDFs) requiring RCRA permit under RCRA Subtitle C.

These emission standards, set forth under 40 CFR Parts 264 and 265, Subpart BB, apply to any "leaks" from valves, pumps, compressors, pressure relief devices, sampling connection systems, flanges or other pipe connectors, control devices, and open-ended valves or lines that may result in organic emissions. Controls for these sources are required at TSDFs where the equipment contains or comes in contact with hazardous waste streams with 10 percent or greater organics content (by weight).

Subpart CC regulations require owners and operators of tanks, container, surface impoundments, and miscellaneous units to limit VOC emissions from these units by providing covers and emission control devices.

**Tanks Subject to Subpart CC:** Any tank that is used to store or treat hazardous waste with a VOC 100 ppm or greater.

**Containers Subject to Subpart CC:** Containers with design volume of greater than 0.1 m<sup>3</sup> (about 26 gallons) that are used to store or treat hazardous waste with a VOC 100 ppm or greater.

---

## Procedure for Compliance with RCRA Subparts BB and CC

---

Generators storing hazardous waste in containers and in tanks for up to 90 days are also subject to the Subpart CC regulations. Satellite accumulation drums of less than 55 gallons are not subject to Subpart CC.

### Procedures:

#### Subpart BB

- Each piece of equipment in waste service, such as pumps, valves, flanges (includes flanges located at either end of a valve), compressors, other connectors (any threaded fitting), open-ended lines, and flanged manway covers must be marked (tagged) such that they are easily distinguished from other pieces of equipment (numbered).

**Note:** Zip ties (nylock ties) are not acceptable for attaching Subpart BB ID tags to equipment. Subpart BB ID tags **must** be attached to equipment using a stainless steel wire which can be ordered from MSC (**MSC #93536928**). All Subpart BB equipment ID tags currently attached to equipment by something other than a stainless steel wire need to be replaced immediately.

- Each open-ended valve or line must be equipped with a cap, blind flange, plug, or a second valve which seals the open end at all times except when hazardous waste flows through the open-ended valve or line. **Note:** Any cover to an open-ended valve must be marked (tagged/number).
- Drawings to show location of each piece of equipment and corresponding tag/number must be current and maintained in the EHS file. **Note:** Notify EHS Manager if tags or equipment are added or removed.
- List numbers for valves (threaded fittings) that are designated as unsafe-to monitor or difficult-to-monitor. Provide an explanation of why these threaded fittings are unsafe or difficult to monitor on a daily basis and when they are inspected. (Example: Tagged equipment on top of vertical tank(s) is inspected annually in conjunction with the Subpart CC inspection. See Subpart CC section of this BOG)
- Each tagged piece of equipment must be visually inspected during daily inspections. If a leak is noticed, it must be noted on the daily inspection log for that day.
- If pieces of equipment are found to be leaking:
  - Note the leaking equipment on the daily inspection form (circle "N" and note the tag number at the bottom of the inspection sheet)
  - Tag the leaking equipment with a weatherproof tag.
  - Complete the Leak Detection and Repair form with the required information. Record the status of repairs on this form.
  - The first attempt to repair the leak must be done in 5 calendar days from the time the leak was noted on the daily inspection sheet.

## Procedure for Compliance with RCRA Subparts BB and CC

- The leak must be repaired with 15 calendar days of detecting a leak or the equipment must be taken out of service. **Note:** Contact BGM and EHS Manager if it appears that repairs cannot be made within the 15 days.
- If repairs are not made within 15 calendar days or taken out of service, the EHS Manager must submit a semi-annual report to the Regional Administrator describing the situation.
- Remove the weatherproof tag when repairs are finished.
- All activities to repair a leak must be recorded on a Leak Detection and Repair form.
- The actual vapor pressure must be maintained in the operating record (EHS 999 file cabinet) to show that the equipment is in heavy liquid service. **Note:** EHS Manager will make sure this information is current, in the EHS 999 file, and available for inspection.

### Subpart CC

- The facility operating record must identify all hazardous waste storage tanks for Subpart CC compliance (including 90 day tanks), drum storage areas and transfer operations, such as drum emptying and truck stations, as applicable units.

**Note:** This information can be found in Part B Permit Application, but must be in EHS 999 file and available for inspection

- Hazardous waste storage tanks must be classified as Level 1 or Level 2 tanks based on the above referenced definitions.

**Note:** Most branch storage tanks are classified as Level 1 tanks. Therefore, the following procedures address Level 1 tanks.

- Vapor pressure of the waste in the tank(s) must be available for inspection (see EHS 999 files).
- Tanks must be equipped with covers, and all cover openings are kept closed except when sampling, adding or removing waste materials.

**Note:** Due to SK policy which requires the use of 55-gallon drums for accumulation of site generated wastes, all satellite accumulation containers of return and fill/dock wastes are subject to this requirement.

**Note:** In states that consider the drum washer(s) as Level 1 tanks, the drum washer(s) lid must be closed when drum washing operations are being conducted and when not in use if materials are present in the unit (exception being when wastes are being added or removed from the equipment), and be equipped with proper seals on the lid to control emissions.

- Annual inspections must be conducted on all tanks' covers and all tank openings, such as manhole covers, pressure relief devices, conservation vents and long bolted manways.

---

## Procedure for Compliance with RCRA Subparts BB and CC

---

**Note:** If visible holes or gaps are noted in the inspection: Repair documentation must indicate the first attempt at repair was performed within 5 days and repairs must be completed within 45 days of discovery unless repair cannot be conducted without emptying the tank or taking it out of service and no alternative tank capacity is available. In such instances, a tank must be repaired the next time it stops operation and the repair must be completed before placing the tank back into service (Note: see EHS Manager for additional guidance if repair cannot be completed within 45 days of detecting a leak. Some permits or other regulatory requirements may not allow the continued operation of a tank beyond 45 days after discovering a defect. Severe leaks will require immediate action and may require the tank to be removed from service immediately, and repair certified by an independent Professional Engineer).

- An inspection of the top of the tank(s) must be conducted annually. The findings must be documented.

**Branches with vertical waste tank(s):** Due to the difficult location of the Subpart BB tags for the threaded fittings at the top of these tank(s), daily inspection of these fittings is not possible. Therefore, in conjunction with the annual Subpart CC inspection, these tagged fittings will be inspected. The documentation of the Subpart CC annual tank inspection will also reference the tag numbers for the fittings located at the top of the tank and whether leaks were noted or not.

**Procedure for Compliance with RCRA Subparts BB and CC**
