Subject: Professional Engineer Review of Safety-Kleen RAI Response

Dear Jeff,

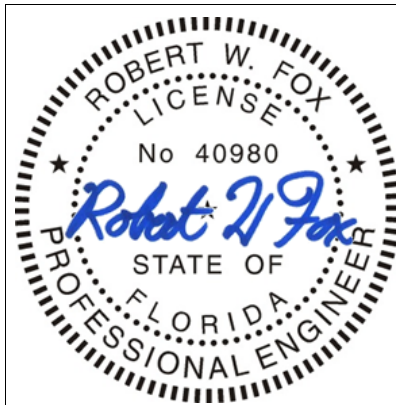

I have reviewed the information provided regarding Safety-Kleen's response to the Tallahassee branch permit renewal application first request for additional information issued by the Florida Department of Environmental Protection (FDEP) dated October 11, 2019. Based on my review and our related discussions, the response does not change the engineering features of the Tallahassee branch and I offer the following certification of the response submittal:

This is to certify that the engineering features of this hazardous waste management facility have been designed or examined by me and found to conform to engineering principles applicable to such facilities. In my professional judgment, this facility, when properly constructed, maintained and operated, or closed, will comply with all applicable statutes of the State of Florida and rules of the Department of Environmental Protection.

I trust this is sufficient to satisfy the FDEP's requirement for your written response to be signed, dated and sealed by a licensed State of Florida Professional Engineer. Let me know if you have any questions or I can be of further service.

Sincerely,

Robert W. Fox, P.E. (FL)
Principal Consultant
