Three documents are posted on the wall. The middle document is titled "FLORIDA DEPARTMENT OF Environmental Protection" and contains a table with the following columns: "Hazardous Waste", "Location", "Quantity", "Date", "Status", and "Remarks". The table is mostly empty, with only a few entries visible. The document on the right is partially obscured by a blue clipboard.

A blue clipboard with a silver clip at the top, holding a document with a circular logo and text. The text is mostly illegible due to the angle and focus.

TERMS & CONDITIONS: Customer agrees that work has been performed satisfactorily. Payment is due upon completion of services. Where CBI extends credit, a charge of 1-1/2% per month, 18% per annum, will be added to balances unpaid 30 days after date of invoice. Collection costs and/or reasonable attorney's fees will be due in the event any collection process becomes necessary. This is not an offer, but merely an estimate of charges. Applicable taxes, tariffs and fuel surcharges will be forwarded on invoice.

Introduction:

Cliff Berry, Inc. (CBI) is operating a used oil transfer facility in the Miami area that receives used oil, oily water and petroleum contact water (PCW) which are generated by retail gasoline stations, oil companies, automobile dealerships, airports and marine interests. All products are delivered to the CBI plant by over the road transport vehicles. The facility has the capacity of storing approximately 1,400,000 gallons of used oil, oily water or PCW.

The facility operates under licenses issued by Miami-Dade County Department of Environmental Resources Management – Pollution Regulation & Enforcement Division (DERM) and the State of Florida Department of Environmental Protection (FDEP). Company owned transport vehicles are licensed by Broward County Environmental Protection Department (EPD) and DERM. All oily liquids and contaminated soils will be transferred and stored within containment areas which have been designed to meet rules and regulations current at the time of installation. All oily liquids delivered to the facility will be handled under manifests issued by the generators.

General Provisions:

As required by the Florida Administrative Code (FAC) Rule 62-710.800(5), CBI has adopted this document to be used as required, during the closure of the facility.

At closure, CBI will institute the following steps:

1. Remove all standing liquids, waste and waste residues from the facility. All stored liquids will be tested, if POTW standards are met, discharge will be made to the sewer system. All liquids which do not meet POTW standards will be sent off-site for proper disposal.
2. Current plans require that the closure event will result in the complete cessation of all operations at the CBI transfer facility. Management does not contemplate partial operation of the facility. There will be no need for further facility maintenance.
3. If monitoring wells have been installed prior to closing, all on site monitoring wells will be sampled in accordance with an approved Quality Assurance Plan and analyzed for US EPA approved mixed product analytical group parameters – Volatile Halocarbons (601), volatile aromatics in water (602), 1,2 dibromomethane (EDB), Methyl ter-butyl ether (MTBE), all eight RCRA Metals. If no monitoring wells have been installed, groundwater sampling and further soil sampling should be evaluated based upon findings of the initial assessment (e.g. not immediately required).
4. A split spoon coring device will be used for the extraction of composite soil samples (taken from the land surface to groundwater at 6 inch depth, then 6 inch to 24 inch depth and so on every 18 inches until water table is reached). Soil samples will be taken from areas immediately adjacent to where trucks are stored and will include sample points on all sides of the facilities

☒ Letter of Credit*

☐ Insurance Certificate ☐ Performance Bond* ☐ Guarantee Bond*
☐ Financial Test ☐ Trust Fund Agreement
*Indicate mechanisms that require use of a Standby Trust Fund Agreement

III. ESTIMATE ADJUSTMENT: (check and use either box a or b, below)
Rule 62-710.800(6)(c), Florida Administrative Code, sets forth the method of annual cost estimate adjustment.

Cost estimates may be adjusted by using an inflation factor or by recalculating the maximum costs of closing in current dollars. Estimates are due annually between January 1 and March 1. Select one of the methods of cost estimate adjustment below.

☒ (a) Inflation Factor Adjustment

Inflation adjustment using an inflation factor may only be made when a Department approved closing cost estimate exists and no changes have occurred in the facility operation which would necessitate modification to the closure plan. The inflation factor is derived from the most recent Implicit Price Deflator for Gross National Product published by the U.S. Department of Commerce in its survey of Current Business. The inflation factor is the result of dividing the latest published annual Deflator by the Deflator for the previous year. The inflation factor may also be obtained from the Solid Waste Financial Coordinator at (850) 245-8732 or be found online at <http://www.dep.state.fl.us/waste/categories/swfr/>

This adjustment is based on the Department approved closing cost estimate dated: 2/13/19
332,257.01 x 1.022 = 339,566.66

Waste Analysis Plan

Sampled material	Sampling method	Frequency
Used Oil	Halogen (sniffer or Q1000 test kits to check for <1000 ppm halogens)	At each pick-up or upon arrival at the facility
Used Bunker Oil	Generator knowledge/ process knowledge	For each pick-up
PCW	Generator knowledge from source that meets definition of PCW. Test for pH.	For each pick-up
Oily Water	Generator knowledge/ process knowledge	For each pick-up

II. a description of the fingerprint analysis on incoming shipments, as appropriate:

Halogen and pH testing, as appropriate, are performed at CBI facilities using field instruments in accordance with the profile. Additional testing consistent with federal, state and local laws is performed at the Miami facility lab as well as confirmation or subsequent laboratory analysis by an approved third party laboratory, typically EPA test methods 8240 and 8260 and TCLP. Based upon the results of testing arrangements will be made for appropriate disposal.

iii. an analysis plan for each outgoing shipment (on batch/lot can equal shipment, provided the lots are discreet units) to include metals and halogens:

The Miami Facility performs a variety of analyses based upon the material and source. Samples may be sent out to a third party laboratory to establish a profile for an approved third party disposal facility. CBI facilities will perform tests on sludges, residues and byproducts upon cleaning of grit traps as noted earlier (see question 4 responses).

Miami Waste Analysis Plan

Background:

CBI Miami Facility is a wastewater separation and waste consolidation site within the Cliff Berry Incorporated group of facilities, sited in the Miami, Florida area. The facility receives used oil, oily water and petroleum contact water for separation and recycling as well as container waste for consolidation and used oil filters and rags for recycling and disposal.

Purpose:

The purpose of this plan is to identify various waste streams that may be accepted into the CBI Miami Facility.

Discussion:

The Waste Analysis Plan will ensure compliance of the facility by detailing the minimum testing requirements for all wastes received into the facility and covers the following waste streams:

- Used Oil,
