VTD Operations

Appendix A

VTD Process Data

**PFF VTD SYSTEM
EPA TSCA/RCRA Test
Batch Protocol**

Stage	Retort	N ₂	Vessel	Temp			<u>Instructions</u>
	Temp	Flow/Temp	vacuum	Ramp Rate & Time (Min)	Soak Time	Stage Time	
	(°F)	(SCFM/°F)	(" Hg)	(°F/ 30 Min)	(Min)	(Min)	
1 (Start)	Ambient → 350	4 - 5 350	4 ± 1	~170 (60)	60	120	Establish and verify nitrogen, cooling water, chilled water, compressed air and specific utilities supply to the VTD system in accordance with SOP valve line-ups and equipment operation. Verify emissions sampling ready status. Load 2 drums of the test feed completely into six trays in the dry room. Transfer the stacked trays into the Q-hut and load into the VTD retort. Close the retort, draw vacuum to tighten door and verify door seal inflation.
2 (Run-Heat-up)	350 → 650	3 - 5 550	4 ± 1	150 (60)	60	120	Begin batch heat cycle by setting the retort heater setpoint to 350 °F. Begin process gas emissions sampling. Set nitrogen purge rate to 4 - 5 scfm and nitrogen temperature to 300 °F. Monitor process temperatures and pressures during heat-up. When the retort temperature reaches 350 °F; hold for ~1 hours at 4" - 5" Hg vacuum.
3 (Run-Heat-up)	650 → 900	2 - 3 @ 600	4 → 26	100 (60)	90	150	Ramp the VTD temperature to 650 °F. Set nitrogen purge rate to 3 - 5 scfm and nitrogen temperature to 550 °F. Monitor process temperatures and oxygen. When the retort temperature reaches 650 °F; hold for 1 hour at 4" - 5" Hg vacuum. Close the upper/lower cond. tanks isolation valve prior to starting the next stage.
4 (Run-Hold)	900 → 1,000	2 - 3 @ 600	27.5 (max limit)	100 (30)	240	270	Ramp the VTD temperature to 900 °F. Adjust nitrogen purge rate to 2 - 3 scfm and nitrogen temperature to 600 °F. Increase the vacuum in 3" - 4" Hg increments. When the retort temperature reaches 900 °F and vacuum 26" Hg; hold for 1.5 hours.
5 (Cool-down)	1,000 → 200	4 - 8 @ heater off	27.5 → 4 → off			420	Ramp the VTD temperature to 1,000 °F. Maintain nitrogen purge rate of 2 - 3 scfm and nitrogen temperature of 600 °F. When the retort temperature reaches 1,000 °F and vacuum 27.5" Hg; hold for up to 4 hours.
6 (Unload-Sample)	<200	Off	Off	-		[~17 - 19 total hours]	Place system in Cool Down Mode. Turn the nitrogen heater off. Vacuum maintained at 4" Hg and nitrogen purge rate maintained to 5 - 6 scfm. When the retort temperature falls to < 400 °F, stop nitrogen purge and vacuum system operation. Maintain retort cooldown blower operation.
							When the retort temperature falls to < 200 °F, stop cooldown sequence. Remove trays and move to Q-hut sub-enclosure. Collect one (1) 1-liter sample from each tray per sampling instructions. Dump the trays into two clean 55-gal drums. Weigh all drums and move to designated cooling area. Transfer batch condensate from tanks into tote container. Drain verify all tanks and filter housings. Prepare for next batch.

PERMA-FIX ANALYTICAL SERVICES

2010 NW 67th Place, Gainesville, FL 32653

Phone: (352) 373-6066

DATA QUALIFIERS

- A : The value reported is the arithmetic mean (average) of two or more measurements.
- B : Blank contamination. The analyte was detected above one-half the reporting limit in an associated blank.
- F : One or more quality control criteria (i.e., recovery, accuracy, precision) failed.
- I : The reported value is between the laboratory method detection limit (MDL) and the laboratory practical quantitation limit (PQL).
- J1 : The reported value is an estimate. No known quality control criteria exist for the component.
- J2 : The reported value is an estimate. It failed to meet the established quality control criteria for either precision (duplicate) or accuracy (spike).
- J3 : The reported value is an estimate. The sample matrix interfered with the ability to make an accurate measurement.
- J4 : The reported value is an estimate. The data are questionable because of improper laboratory or field protocols.
- J5 : The reported value is an estimate. The calibration verification did not meet calibration acceptance criteria.
- K : Off-scale low. Actual value is known to be less than the value given.
- L : Off-scale high. The concentration of the analyte exceeds the highest calibration standard.
- M : The analyte level is too low to permit accurate quantitation, but the estimated concentration is greater than the Method Detection Limit.
- O : Sampled, but analysis lost, not requested, or not performed due to insufficient sample.
- Q : Sample held beyond the accepted holding time.
- T : Value reported is less than the laboratory method detection limit (MDL). The value is reported for informational purposes only and shall not be used in statistical analysis.
- U : The value reported with this qualifier is the laboratory method detection limit. Analysis was performed, but the analyte was not detected above the method detection limit.
- V : The analyte was detected above MDL in the method blank. The blank value has not been subtracted from the sample result.
- Y : The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
- Z : Not reported due to interference.
- ? : Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside acceptance criteria and the presence or absence of the analyte cannot be determined from the data.
- * : Miscellaneous data qualifier. See description on the report.

NOTES :

1. All results relate only to the samples as received by the PAS Laboratory and the items tested.
2. Unless otherwise indicated, concentrations are reported on an as-received rather than dry weight basis.
3. Non-certified analytical results cannot be used to make regulatory determinations.
4. Perma-Fix Analytical Services analytical method SOPs are based on modified SW-846 methods where applicable.

NOTES :

1. REGULATORY LIMITS are for LDR Volatiles in Non Waste Water (solid) Matrices.
2. Unless otherwise indicated, concentrations are reported on an as-received rather than dry weight basis.
3. Results reported as N/D did not have detectable amounts of the analyte.
4. Results reported as N/Q could not be analyzed for due to sample interference.
5. The PAS Laboratory analytical method SOPs are based on modified SW-846 methods where applicable.
6. The PAS Laboratory is not certified by the state for volatiles analysis. Therefore these results cannot be used to make regulatory determinations.
7. Results with reported values less than PQL must be regarded as estimates and may not be compared to regulatory limits.

This report has been prepared and reviewed in accordance with Perma-Fix of Florida, Inc. standard operating procedures.

Benzo(g,h,i)perylene	191-24-2	N/D	<MDL	mg/kg	2.22	6.01	1.80

NOTES:

1. REG. LIMITS are for LDR Semi-Volatiles in Non Waste Water (solid) Matrices.
2. The PQL (Practical Quantitation Level) is based on 4x the MDL or the lowest calibration standard.
3. Results reported as N/A were not analyzed for.
4. Results reported as N/Q could not be analyzed for due to sample interference.
5. Results reported as N/D did not have detectable amounts of the analyte.
6. Results with reported values less than PQL must be regarded as estimates and may not be compared to regulatory limits.
7. Unless otherwise indicated, concentrations are reported on an as-received rather than dry weight basis.
8. The PAS Laboratory is not a state certified lab for semi-volatiles analysis, therefore these results cannot be used to make regulatory determinations.
9. PAS Laboratory analytical method SOPs are based on modified SW-846 methods where applicable.

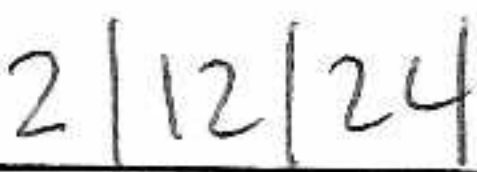

DATA QUALIFIERS:

** The reported value is an estimate. The quality control limits have been exceeded.

This report has been prepared and reviewed in accordance with Perma-Fix of Florida, Inc. standard operating procedures.
Please direct any questions to Sophia Barbour, Laboratory Manager.

NOTES :

ND: Not detectable.

1. All results relate only to the samples as received by the PAS Laboratory and the items tested.
2. Unless otherwise indicated, concentrations are reported on an as-received rather than dry weight basis.
3. Non-certified analytical results cannot be used to make regulatory determinations.
4. Perma-Fix Analytical Services analytical method SOPs are based on modified SW-846 methods where applicable.

This report has been prepared and reviewed in accordance with Perma-Fix of Florida, Inc. standard operating procedures.

Please direct any questions or feedback to Sophia Barbour, Laboratory Manager (sophia.barbour@perma-fix.com).

NOTES :

1. REGULATORY LIMITS are for LDR Volatiles in Non Waste Water (solid) Matrices.
2. Unless otherwise indicated, concentrations are reported on an as-received rather than dry weight basis.
3. Results reported as N/D did not have detectable amounts of the analyte.
4. Results reported as N/Q could not be analyzed for due to sample interference.
5. The PAS Laboratory analytical method SOPs are based on modified SW-846 methods where applicable.
6. The PAS Laboratory is not certified by the state for volatiles analysis. Therefore these results cannot be used to make regulatory determinations.
7. Results with reported values less than PQL must be regarded as estimates and may not be compared to regulatory limits.

This report has been prepared and reviewed in accordance with Perma-Fix of Florida, Inc. standard operating procedures.
Please direct any questions to Sophia Barbour, Laboratory Manager.

NOTES:

1. REG. LIMITS are for LDR Semi-Volatiles in Non Waste Water (solid) Matrices.
2. The PQL (Practical Quantitation Level) is based on 4x the MDL or the lowest calibration standard.
3. Results reported as N/A were not analyzed for.
4. Results reported as N/Q could not be analyzed for due to sample interference.
5. Results reported as N/D did not have detectable amounts of the analyte.
6. Results with reported values less than PQL must be regarded as estimates and may not be compared to regulatory limits.
7. Unless otherwise indicated, concentrations are reported on an as-received rather than dry weight basis.
8. The PAS Laboratory is not a state certified lab for semi-volatiles analysis, therefore these results cannot be used to make regulatory determinations.
9. PAS Laboratory analytical method SOPs are based on modified SW-846 methods where applicable.

DATA QUALIFIERS:

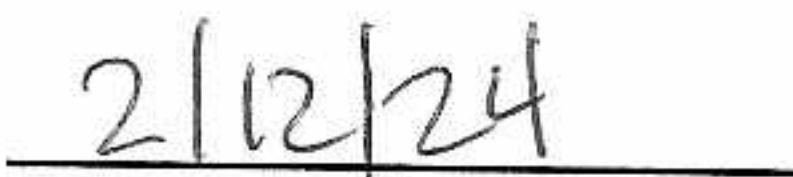

** The reported value is an estimate. The quality control limits have been exceeded.

This report has been prepared and reviewed in accordance with Perma-Fix of Florida, Inc. standard operating procedures. Please direct any questions to Sophia Barbour, Laboratory Manager.

RE: Surrogate Spike Weights

Rich,

Performed 26 July, 2024.

Balance Model	Serial Number	Capacity (gm)	Resolution (gm)
Ohaus SPX6201	C336769016	6200	0.1

Organic Spike:

Gross Weight (gm)	Tare Weight (gm)	Net Weight (gm)
4602.6	1204.4	3398.2

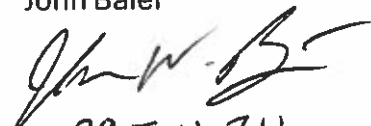

Metals Spike:

Gross Weight (gm)	Tare Weight (gm)	Net Weight (gm)
1171.0	40.2	1130.8

Note that these are the weights with the spikes weighed as received, then shaken and poured out for tare. Lid securing tape was maintained with the organic spike for gross and tare. Lids were maintained for gross and tare on both spikes. Net weights represent "to deliver" weights, i.e. what was added to each drum of surrogate material.

Thanks,

John Baier

Analytical Report

Testing of Organic and Metals Spike Mixtures

Prepared by:

Jackie Ranger

Prepared for:

Perma-Fix of Florida, Inc.

SwRI Project #: 28407.06.005

SwRI TO#: 240520-2

INTRODUCTION

Two spike solution samples were received at SwRI on 5/13/2024. The samples were logged into SwRI's Laboratory Information Management System (LIMS) under Sample Receipt Record (SRR) #71145 and were assigned to task order #240520-2. Table 1 contains the sample information. The SwRI task order and sample receipt information are provided in Appendix A.

Table 1. Sample Information

SwRI System ID	Customer Sample ID
720195	Metals Spike
720196	Organic Spike

METALS SPIKE SAMPLE ANALYSIS

The Metals Spike sample contained yellow-orange precipitate. Five milliliter aliquots of well-mixed sample were weighed in triplicate. The aliquots were initially digested with nitric acid, followed by hydrochloric acid, and then brought to fifty milliliter final volume with DI water. A preparation blank and laboratory control sample were also prepared with the samples.

The resulting digestates were analyzed for arsenic, cadmium, chromium, and lead by ICP-AES, using SW-846 Method 6010D as a guide. The results are presented below in Table 2. The report and raw data are provided in Appendix B.

All QC criteria were met. The calibration verification (ICV/CCV) recoveries were within 90-110%. No analytes were detected above SwRI's reporting limits (RL) in the initial and continuing calibration blanks (ICB/CCB). The low level, check standard recoveries were within 80-120%. The percent recoveries for the ICSAB interference check samples were within 80-120%. The limits (which are the ICSA true value \pm 2 times the RL) were met for the ICSA interference check samples.

No analytes were detected in the preparation blank above SwRI's RLs. The laboratory control sample recoveries were within 80-120%. The recoveries for the post-digestion spike (AS) analyses were within 75-125%. The duplicate (D) and triplicate (T) relative percent differences (RPD) were less than 20%, when compared to the parent sample. The percent differences for the serial dilution analyses were less than 10%.

Table 2. Metals Spike Sample Results (in weight percent)

SwRI ID	Arsenic	Cadmium	Chromium	Lead
720195	1.69%	1.58%	1.49%	1.37%
720195D	1.68%	1.55%	1.48%	1.34%
720195T	1.64%	1.52%	1.45%	1.31%
Target	1.72%	1.62%	1.47%	1.46%

ORGANIC SPIKE SAMPLE ANALYSIS

The bulk density was determined for the Organic Spike sample according to SwRI TAP 01-0406-164. The test was performed at room temperature of 21.4°C. The sample was analyzed in duplicate (D). The RPD was less than 20%. DI water was used as the laboratory control sample, and an acceptable recovery of 100.2% was obtained. The results are presented in Table 3. The report and raw data are provided in Appendix C.

Table 3. Bulk Density Results for the Organic Spike Sample

SwRI ID	Bulk Density
720196	1.26 g/mL
720196D	1.26 g/mL

The Organic Spike sample was analyzed for the requested volatile organic compounds (VOC) using a purge and trap GC/MS method (similar to SW-846 Method 8260D). It was prepared using a methanol extraction procedure due to the high level of VOC's present in the sample. A method blank and two laboratory control samples (LCS, LCSD) were prepared with the sample.

The VOC results are presented below in Table 4. The report forms and raw data are provided in Appendix D. The sum of the reported VOCs is 102%. Given the large level of dilutions required, and the inherent variance in the instrumentation's daily performance, this value is within accuracy and precision data for this method.

Most QC met criteria. All compounds were recovered within the accepted limits for the initial calibration verification. The percent difference limits for the continuing calibration checks were met for all compounds. The bromofluorobenzene (BFB) instrument performance checks were acceptable. The surrogate recoveries were within 70-130%. The internal standard acceptance limits were met for the areas (-50% to 100%) and retention times (± 0.50 minutes).

No target compounds were detected in the method blank above SwRI's RLs. The recoveries for the LCS and LCSD were within 70-130%. The LCS/LCSD RPDs were less than 20%.

Table 4. Organic Spike Sample Results (in weight percent)

Compound	Result	Target
Ethylbenzene	0.890%	----
M/P-Xylene	6.40%	6.67%
O-Xylene	1.40%	
Tetrachloroethene	5.60%	6.67%
1,2-Dichlorobenzene	83.0%	80.0%
Naphthalene	5.00%	6.67%

Client(s): Perma-Fix of Florida, Inc.Project(s): 28407.06.005
Manager(s): Ranger, Jacqueline
To Client: 06/03/24**Instructions**

Refer to client emails before starting.

The samples include 1 organic mixtures (4 compounds) and 1 aqueous metal mixtures (4 metal compounds in water). The client is using them for a treatment test. They are using a mass balance basis to determine test inputs and outputs. They need SwRI to analyze the mixtures to determine the actual mass-based concentrations of:

1. Each organic compound relative to the total mixture
2. Each metal (as pure metal) relative to the total mixture.

TAT: 21 days

Tests to include:

1. Metals list: As, Pb, Cd, and Cr
2. GC/MS Volatile Analysis for: Xylenes (o, m/p), Ethylbenzene, Dichlorobenzene-1,2, Tetrachloroethylene, and Napthalene
- NOTE per Elaine: run low level if Medium level indicates we can go lower
3. WET-MISC: Density for Organic Mixture sample only

Metals solution will be returned to the client.

Email results to: Rich Devin, rick.devin@perma-fix.com

Creation Date: 05/13/24

Notes

1 cooler was delivered to SwRI's Shipping & Receiving Warehouse. Division 01 AEC LOGIN staff picked up the cooler from Receiving and took custody. Samples were received intact.

FED Ex Tracking #:

7763 0803 0164 _16.5°C (wet ice).

See the chain-of-custody for more information.

Test requirements located on the applicable Task Order.

DELIVERY DISCREPANCY _ Cooler under FED EX Tracking # 7763 0803 0164 was shipped out on 05-09-2024 for anticipated delivery on 05-10-2024 (Friday). Due to a delay with FED EX, the cooler was finally delivered to SWRI on 05-13-2024 (Monday). The cooler arrived at an elevated temp of 16.5°C, with melted ice.

VOLATILE ANALYSIS

One liquid sample under this SDG was received and analyzed for VOC analytes per SwRI TAP 01-0404-043 Rev.14. The samples were analyzed by using purged a seven-point standard calibration. If %RSDs for target compounds were less than 20% in the initial calibration, the compounds were quantitated using the average response factor from the initial calibration curve. If the %RSD was greater than 20%, a linear regression type curve was used ($R^2 > 0.990$). Calibration data is found on Form VI of the data package.

ICV was analyzed at 25ppb after calibration curve. All monitored compounds were recovered within the accepted limits. See Form 7FICV of the data package.

When required, mid-level standards at 25 ppb were analyzed after BFB tuning analysis at the beginning of new 12-hour clock. A continuing calibration standards met %D for all analytes. See Form VII of the data package.

Closing CCV at 25 ppb of the mid-level standard was analyzed at the end of analytical batch. The closing CCV met %D of 50% for analytes.

Due to the nature of the sample matrix, the samples were analyzed by using methanol extraction procedure due to high level of sample matrix. The sample was analyzed by different dilution factors in order to bring concentration of compounds into the calibration range. If detected, volatile analytes are reported on Form Is. Tentatively identified compounds (TICs) are not required. Concentrations of detected analytes are reported based on weight in units of $\mu\text{g/kg}$.

Surrogate compounds were monitored for recovery within the criteria in the blank, LCS, and the samples. Results are summarized on Form II of the data package.

LCS and LCSD were analyzed as quality controls. All spiked compounds were monitored for recovery within the acceptance QC limits and %RPDs were within the acceptance limit. See Form III of the data package.

MS/MSD analyses were unable to perform due to sample matrix.

No target analytes were detected in method blank above the reporting limit. All samples associated with the method blank are summarized on Form IV of the data package.

For Purge & Trap GC/MSD method (method 8260D.) with scan mode, a BFB tuning was performed prior to analyze all other QC samples and samples. All abundance criteria were achieved for BFB tuning. Samples were analyzed within 12 hours of injection of 25ng of p-bromofluorobenzene. See Form V of the data package.

Internal standard compound areas were monitored within the acceptance range of -50% to +100% of the midpoint calibration standard or daily continuing standard in the blank, QC samples, and samples. Internal standard retention times were monitored within the acceptance limit of +/- 0.50 minutes of those in the midpoint. Results are summarized on Form VIII of the data package.

Manual integration:

Several peaks required manual integration by the analyst to correct the automated integration in cases where a baseline was improperly integrated, a peak was misidentified, a partial peak was integrated, or a peak was missed. These manual integrations have been flagged with "m" on the raw data and initialed and dated by the analyst.

Sample calculation:

Calibration standard REVEILLE060724S04
Response of 10ppb Ethylbenzene = 140174
Response of 5ppb Chlorobenzene-d5 (IS3) = 190169

$$RRF = \frac{Area_{(analyte)}}{Area_{(IS)}} \times \frac{Conc_{(IS)}}{Conc_{(analyte)}}$$

$$RRF = \frac{140174}{190169} \times \frac{5ppb}{10ppb} = 0.369 \text{ (Form VI)}$$

Mean RRF = 0.372 (Form VI)

For sample Organic Spike (720196), Filename REVEILLE061424004
Response for Ethylbenzene = 355018
Response for Chlorobenzene-d5 (IS3) = 209894

$$\text{Concentration} = \frac{Area_{(analyte)}}{Area_{(IS)}} \times \frac{Conc_{(IS)}}{MeanRRF} \times \text{Extraction Factor} \times \text{Dilution Factor}$$

Where IS = Internal Standard

$$\begin{aligned} \text{Conc. of Ethylbenzene} &= (355018 / 209894) \times (5.0 \text{ ng/mL} / 0.372) \times (10\text{mL}/1.12\text{g}) \\ &\quad \times (44\text{mL}/0.001\text{mL}) \\ &= 8931246.3 \text{ ng/g} = 8931246.3 \text{ ug/kg} \end{aligned}$$

Concentration of Ethylbenzene reported on Form I = 8900000 ug/kg

DATA REPORTING QUALIFIERS

- B This flag is used when the analyte is found in the blank as well as the sample.
E This flag indicates compounds whose concentrations exceed the calibration range.
J Indicates an estimated value.
U Indicates compound was analyzed for, but not detected. Report the minimum detection limit for the sample with U (e.g. 10U) based on necessary concentration dilution action (This is not necessarily the instrument detection limit).

Instrument Performance Check

Bromofluorobenzene (BFB)

File ID: REVEILLE061424T01

BFB Injection Date: 06/14/24

BFB Injection Time: 10:39:00

Instrument: REVEILLE

GC Column: Rtx-624 30m x 0.25mm ID

m/e	Ion Abundance Criteria	% Relative Abundance	
50	15.0 - 40.0% of mass 95	15.8	
75	30.0 - 60.0% of mass 95	45.7	
95	Base Peak, 100% relative abundance	100.0	
96	5.0 - 9.0% of mass 95	6.6	
173	Less than 2.0% of mass 174	1.0	1.1 (1)
174	Greater than 50.0% of mass 95	97.1	
175	5.0 - 9.0% of mass 174	6.8	7.0 (1)
176	95.0 - 105% of mass 174	93.7	96.5 (1)
177	5.0 - 9.0% of mass 176	5.8	6.2 (2)

1. Value is % of Mass 174 2. Value is % of Mass 176

This check applies to the following samples

Re: VTD TSCA TEST 2024 VTD_TSCA_Post Test_1-3_EPA
Work Order: 660771

Dear Sophia Barbour:

GEL Laboratories, LLC (GEL) appreciates the opportunity to provide the enclosed analytical results for the sample(s) we received on March 30, 2024. This original data report has been prepared and reviewed in accordance with GEL's standard operating procedures.

Test results for NELAP or ISO 17025 accredited tests are verified to meet the requirements of those standards, with any exceptions noted. The results reported relate only to the items tested and to the sample as received by the laboratory. These results may not be reproduced except as full reports without approval by the laboratory. Copies of GEL's accreditations and certifications can be found on our website at www.gel.com.

Our policy is to provide high quality, personalized analytical services to enable you to meet your analytical needs on time every time. We trust that you will find everything in order and to your satisfaction. If you have any questions, please do not hesitate to call me at (843) 556-8171, ext. 4422.

Sincerely,

Adrian Melendrez for
Jacob Crook
Project Manager

Laboratory Identification:

GEL Laboratories LLC
2040 Savage Road
Charleston, South Carolina 29407
(843) 556-8171

Summary:

Sample receipt: The samples arrived at GEL Laboratories LLC, Charleston, South Carolina on March 30, 2024 for analysis. The samples were delivered with proper chain of custody documentation and signatures. The samples were screened according to GEL Standard Operating Procedure. All sample containers arrived without any visible signs of tampering or breakage. Containers were checked for pH, where appropriate, and matched the preservative as documented on the accompanying chain of custody. Shipping container temperature was within specification (0 - 6C). Samples were received within the specified holding time. There are no additional comments concerning sample receipt.

Sample Identification: The laboratory received the following samples:

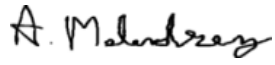

<u>Laboratory ID</u>	<u>Client ID</u>
660771001	12045.B1.Top Front.EPA
660771002	12045.B1.Middle Front.EPA

Case Narrative:

Sample analyses were conducted using methodology as outlined in GEL's Standard Operating Procedures. Any technical or administrative problems during analysis, data review, and reduction are contained in the analytical case narratives in the enclosed data package.

The enclosed data package contains the following sections: Case Narrative, Chain of Custody, Cooler Receipt Checklist, Data Package Qualifier Definitions and data from the following fractions: GC/MS Volatile, GC/MS

Semivolatile and Metals.

A handwritten signature in black ink, appearing to read "A. Melendrez".

Abigail,

The chain is correct, 12045. I apologize for the discrepancies, multiple hands in the project, all sleep-deprived. Don't hesitate to reach out if you need anything further.

John,

Thank you for the clarifications! The lid for this container reads B1.BF.PFF, NW: 71.7. Apologies, but that was a typo in my previous email – the COC reads **12045**.B1.Bottom Front.PFF and the container reads **14045**.B1.Bottom Front.PFF. The only difference is the second digit in the ID.

Thanks,

Abigail Martin

Abigail,

Corrections below in red. Transcription errors on the chain.

12045.B1.Bottom Front.PFF (COC) vs. 14042.B3.Bottom Front.PFF (Container) – Please clarify, what is marking on lid?

Thanks,
John Baier

Subject: [POTENTIAL SENDER IMPOSTER - SPF ERROR] Perma-Fix Sample ID/Collection time discrepancies

Hi Sophia,

The samples received on Saturday, March 30th with the COCs attached here had some discrepancies between the sample IDs and collection times on the chains of custody vs. that of their container label. Could you please clarify the correction information that we should report in our system for the following collection times:

12042.B3.Bottom Front.PFF:

COC collection time - **07:30 - incorrect**

Container collection time – **07:35 - correct**

12042.B3.Bottom Front.EPA:

COC collection time - **07:30 - incorrect**

Container collection time – **07:35 -correct**

And the following sample IDs:

12042.B3.Top **Front**.PFF (COC) - **Incorrect** vs. 12042.B3.Top **Back**.PFF (Container) - **correct**

12042.B3.Middle **Front**.PFF (COC) - **Incorrect** vs. 12042.B3.Middle **Back**.PFF (Container) - **correct**

12045.B1.Bottom Front.PFF (COC) vs. 14042.B3.Bottom Front.PFF (Container) – **Please clarify, what is marking on lid?**

12042.B3.Bottom **Front**.PFF (COC) - **Incorrect** vs. 12042.B3.Bottom **Back**.PFF (Container) - **correct**

12042.B3.Middle **Front**.EPA (COC) - **Incorrect** vs. 12042.B3.Middle **Back**.EPA (Container) - **correct**

12042.B3.Bottom **Front**.EPA (COC) - **Incorrect** vs. 12042.B3.Bottom **Back**.EPA (Container) - **correct**

A copy of both COCs with the samples in question highlighted is attached here. Let me know if there is anything I need to clarify, thank you!

Thanks,

Abigail Martin

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

Continuing Calibration Verification Requirements

All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8260D for samples and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8260D outlier acceptance criteria. The results are reported.

Quality Control (QC) Information

Blank (MB) Statement

Target analytes were detected in the blank 1205692482 (HB) below the reporting limit. The associated data are qualified accordingly and reported.

Relative Percent Difference (RPD) Statement

The RPD between the matrix spike pair (See Below) were not all within the acceptance limits. However, the spike recoveries passed. The unacceptable RPD may be attributed to matrix interference and/or sample non-homogeneity.

Sample	Analyte	Value
1205692483PS and 1205692484PSD (12045.B1.Top Front.EPA)	1, 2, 4-Trichlorobenzene	RPD 26* (0%-20%)

Technical Information

Sample Dilutions/Methanol Dilutions

Samples were analyzed employing a methanol dilution extraction procedure because the sample matrices were not amenable to more concentrated analyses.

Analyte	660771

Several	50X	50X	50X	50X	50X	50X	50X	50X

Miscellaneous Information

Additional Comments

Samples were characterized as miscellaneous solids.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Qualifier Definition Report for

PERM001 Perma-Fix of Florida

Client SDG: 660771 GEL Work Order: 660771

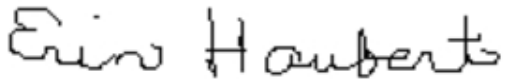

The Qualifiers in this report are defined as follows:

- * A quality control analyte recovery is outside of specified acceptance criteria
- ** Analyte is a surrogate compound
- B The target analyte was detected in the associated blank.
- J Value is estimated
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- DL Indicates that sample is diluted.
- RA Indicates that sample is re-analyzed without re-extraction.
- RE Indicates that sample is re-extracted.

Review/Validation

GEL requires all analytical data to be verified by a qualified data reviewer. In addition, all CLP-like deliverables receive a third level review of the fractional data package.

The following data validator verified the information presented in this data report:

Semi-Volatile Analysis

Case Narrative

**GC/MS Semivolatile
Technical Case Narrative
Perma-Fix of Florida
SDG #: 660771**

Product: Analysis of Semivolatile Organic Compounds by Gas Chromatography/Mass Spectrometry

Analytical Method: SW846 3541/8270E

Analytical Procedure: GL-OA-E-009 REV# 48

Analytical Batch: 2589785

Preparation Method: SW846 3541

Preparation Procedure: GL-OA-E-066 REV# 9

Preparation Batch: 2589781

The following samples were analyzed using the above methods and analytical procedure(s).

1205690505	660751001(NonSDG) Matrix Spike Duplicate (MSD)

The samples in this SDG were analyzed on an "as received" basis.

Data Summary:

All sample data provided in this report met the acceptance criteria specified in the analytical methods and procedures for initial calibration, continuing calibration, instrument controls and process controls where applicable, with the following exceptions.

Calibration Information

CCV Requirements

All Calibration Verification Standards (CCV) did not meet the acceptance criteria as outlined in Method 8270D/E for samples 660771001 (12045.B1.Top Front.EPA), 660771002 (12045.B1.Middle Front.EPA), 660771003 (12045.B1.Bottom Front.EPA), 660771004 (12044.B1.Top Back.EPA), 660771005 (12044.B1.Middle Back.EPA),

660771006 (12044.B1.Bottom Back.EPA), 660771007 (12038.B2.Top Front.EPA), 660771009 (12038.B2.Bottom Front.EPA), 660771010 (12043.B2.Top Back.EPA), 660771011 (12043.B2.Middle Back.EPA), 660771012 (12043.B2.Bottom Back.EPA), 660771013 (12041.B3.Top Front.EPA), 660771014 (12041.B3.Middle Front.EPA), 660771015 (12041.B3.Bottom Front.EPA), 660771016 (12042.B3.Top Back.EPA), 660771017 (12042.B3.Middle Back.EPA) and 660771018 (12042.B3.Bottom Back.EPA) and the associated QC. However, the method allows for a designated number of outliers dependent on the requested analyte list. This SDG satisfied the 8270D/E outlier acceptance criteria. If required, a CRDL was analyzed after the CCVs to demonstrate that there is adequate sensitivity to detect the failed compounds at the applicable lower quantitation limit.

Technical Information

Sample Re-extraction/Re-analysis

The initial analysis for samples 660771017 (12042.B3.Middle Back.EPA) and 660771018 (12042.B3.Bottom Back.EPA) was outside of the DFTPP TUNE window. The samples were re-analyzed within a new DFTPP TUNE window. The data results are reported from the re-analysis.

Miscellaneous Information

Manual Integrations

Samples (See Below) required manual integration in order to properly identify one or more peaks and/or to correctly position the baseline as set in the calibration standard injections.

Sample	Analyte	Value
660771002 (12045.B1.Middle Front.EPA)	Benzoic acid	Result 790ug/kg
660771009 (12038.B2.Bottom Front.EPA)	Benzoic acid	Result 783ug/kg
660771011 (12043.B2.Middle Back.EPA)	Benzoic acid	Result 774ug/kg
660771012 (12043.B2.Bottom Back.EPA)	Benzoic acid	Result 796ug/kg
660771014 (12041.B3.Middle Front.EPA)	Benzoic acid	Result 890ug/kg

Additional Comments

Diphenylamine Statement

Diphenylamine has superseded the reporting of N-Nitroso-diphenylamine. As per the EPA, N-Nitroso-diphenylamine decomposes in the gas chromatographic inlet and cannot be separated from Diphenylamine. Studies of these two compounds at GEL, both independent of each other and together, showed that they not only co-elute, but also have similar mass spectra. N-Nitroso-diphenylamine and Diphenylamine are therefore reported as Diphenylamine on all reports and forms.

Certification Statement

Where the analytical method has been performed under NELAP certification, the analysis has met all of the requirements of the NELAC standard unless otherwise noted in the analytical case narrative.

Qualifier Definition Report for

PERM001 Perma-Fix of Florida

Client SDG: 660771 GEL Work Order: 660771

The Qualifiers in this report are defined as follows:

- * A quality control analyte recovery is outside of specified acceptance criteria
- ** Analyte is a surrogate compound
- J Value is estimated
- U Analyte was analyzed for, but not detected above the MDL, MDA, MDC or LOD.
- DL Indicates that sample is diluted.
- RA Indicates that sample is re-analyzed without re-extraction.
- RE Indicates that sample is re-extracted.

Review/Validation

GEL requires all analytical data to be verified by a qualified data reviewer. In addition, all CLP-like deliverables receive a third level review of the fractional data package.

The following data validator verified the information presented in this data report:

Signature: 

Name: Barbara Bailey

Date: 04 APR 2024

Sample Summary

SDG Number: 660771

Lab Sample ID: 660771018

Client ID: 12042.B3.Bottom Back.EPA

Batch ID: 2589785

Run Date: 04/03/2024 16:41

Prep Date: 04/02/2024 07:52

Data File: S040324\1D0307.D

Date Collected: 03/29/2024 07:35

Date Received: 03/30/2024 09:30

Client: PERM001

Method: SW846 3541/8270E

Inst: MSD1.I

Analyst: LL2

Aliquot: 10.55 g

Column: Description: DB-5ms

Matrix: MISC SOLID

Project: PERM00224

SOP Ref: GL-OA-E-009

Dilution: 1

Inj. Vol: 1 uL

Final Volume: 1 mL

CAS No.	Parmname	Qualifier	Result	Units	MDL/LOD	PQL/LOQ
91-94-1	3,3'-Dichlorobenzidine	U	948	ug/kg	284	948
57-97-6	7,12-Dimethylbenz(a)anthracene	U	948	ug/kg	284	948
56-49-5	3-Methylcholanthrene	U	948	ug/kg	284	948
126-68-1	Triethylphosphorothioate	U	948	ug/kg	284	948
