Waste Tire Processing Facility Permit Application

D. E. R.

SEP 19 1989

SOUTHWEST DISTRICT TAMPA

1. Facility information:

Facility name: CITRUS COUNTY CENTRAL LANDFILL
Street address (main entrance): 380 W. Gulf-to-Lake Hwy. (Hwy. 44)
City Lecanto County Citrus Zip 32661
Mailing address: P. O. Box 440
City Lecanto State Florida Zip 32661
Telephone number: (904) 746-2694
Location: Section 1, Township 19, Range 18
Latitude 28° 51' 11", Longitude 82° 26' 22"

2. Application type (check appropriate box):

Proposed new facility.
Existing unpermitted facility.
Renewal of permitted facility. Permit number
[X] Modification of permitted facility. Permit number S009-111795
Other. Explain

3. Facility type (check appropriate box):

Waste tire processing facility.
Waste tire processing facility with on-site disposal of processed tires or processing residuals.
[X] Permitted solid waste management facility modification to allow waste tire site and processing.

4. Property owner information:

Owner's name: Citrus County Board of County Commissioners
Owner's mailing address: 110 N. Apopka Avenue
City Inverness State Florida Zip 32650
Owner's telephone number: (904) 726-8500
Ownership type (check appropriate box): Individual Partnership Corporation [X] Government
Other, explain

DER Form #	17-711.900(5)
Form Title	Waste Tire Processing Facility Permit Ap.
Effective Date	February 22, 1989
DER Application No.	(Filed in by DER)

5. Facility operator information (if different from owner):

Operator's name: Citrus County Division of Solid Waste Management

Operator's mailing address: P. O. Box 440

City Lecanto State Florida Zip 32661

Operator's telephone number: (904) 746-2694

Operator's type (check appropriate box): Individual Partnership Corporation Government

Other, explain _____

6. Preparer of application:

Name of person preparing application: James E. Barker, Jr.

Mailing address: P. O. Box 440

City Lecanto State Florida Zip 32661

Telephone: (904) 746-2694

Affiliation with facility: Director, Division of Solid Waste Management

7. Type of processing facility (check as many as apply):

Shredder Cutter Chopper Incinerator only Incinerator with energy recovery Pyrolysis

Other, explain _____

8. Required attachments:

Please include the following information items in the application or give an explanation, if they are not applicable.

A. Facility design.

NOTE: All maps, plan sheets, drawings, isometrics, cross sections, or aerial photographs shall be legible; be signed and sealed by a registered professional engineer responsible for their preparation; be of appropriate scale to show clearly all required details; be numbered, referenced to narrative, titled, have a legend of symbols used, contain horizontal and vertical scales (where applicable), and specify drafting or origination dates; and use uniform scales as much as possible, contain a north arrow and use NGVD for all elevations.

- 1) A topographic or section map of the facility, including the surrounding area for one mile, no more than one year old, showing land use and zoning within one mile of the facility.
- 2) Evidence that the facility is in conformance with local zoning.
- 3) A plot plan of the facility on a scale of not less than one inch equals 200 feet. At a minimum, the plot plan shall include:
 - a) The facility design, including the location and size of all storage and processing areas for waste tires, processed tires, and residuals from processing;
 - b) All wetlands and water bodies;
 - c) Stormwater control measures, including ditches, dikes and other structures;
 - d) Legal boundaries, easements and rights of way;
 - e) Location of all wells, operating and abandoned;
 - f) All structures and buildings that are or will be constructed at the facility; include those used in storage and processing operations;
 - g) All areas used for loading and unloading;
 - h) All access roads and internal roads, including fire lanes;
 - i) Location of all fences, gates, and other access control measures; and
 - j) Location of all processed tire or residual disposal areas.

DER Form	17-711.900(6)
Form Title	Waste Tire Processing Facility Permit Ap
Effective Date	February 22, 1989
DER Application No	(Filed in by DER)

- 4) A completed application to construct a resource recovery and management facility for any disposal areas (DER Form 17-7.130(1), 12/10/85) must be submitted along with this application, if processed tires or processing residuals will be disposed of at the facility and the facility is not currently permitted as a solid waste management facility.
- 5) A completed solid waste volume reduction facility data form (DER Form 17-7.130(1), 12/10/85).

B. Facility Operation.

- 1) Description of the facility's operation, including how waste tires and processed tires will be collected, stored and processed.
- 2) Description of how each of storage requirements of Rule 17-711.540, F.A.C., will be met.
- 3) Copy of the emergency preparedness manual for the facility.
- 4) Copy of the fire safety survey.
- 5) Description of how 75% of the annual accumulation of waste tires and processed tires will be processed and removed for disposal or recycling.

C. Completed closure plan for the facility as required by Rule 17-711.700(2) and (3), F.A.C.

D. Attach proof of financial responsibility as required by Rule 17-711.510(2), F.A.C.

E. Attach permit fee required pursuant to Rule 17-141, F.A.C.

9. Indicate the quantities of waste tires and processed tires, expressed in tons, stored at the facility:

	Current Storage (tons)	Storage Area (sq. ft.)	Maximum Storage (tons)
Waste tires	2,500	5,250	5,000
Processed tires	0	0	0
TOTALS	2,500	5,250	5,000

10. Facilities that will not be disposing of processed tires or processing residual on the facility site must indicate the permitted solid waste management facility where processed tires or residuals will be disposed.

Name of facility _____

Street address _____

City _____ County _____ Zip _____

11. Facilities that will be delivering processed tires to a recycling facility must describe the existing or proposed markets for processed tires.

DER Form #	17-711.900(6)
Form Title	Waste Tire Processing Facility Permit Ap.
Effective Date	February 22, 1989
DER Application No.	(Filled in by DER)

12. Certification:

A. Applicant.

The undersigned applicant or authorized representative of Citrus County Div. of Solid Waste Mgmt. is aware that statements made in this form and attached information are an application for a Waste Tire Processing Facility Permit from the Florida Department of Environmental Regulation and certifies that the information in this application is true, correct and complete to the best of his knowledge and belief. Further, the undersigned agrees to comply with the provisions of Chapter 403, Florida Statutes, and all rules and regulations of the Department. It is understood that the permit is not transferable, and the Department will be notified prior to the sale or legal transfer of the facility.

	James E. Barker, Jr. Director, Div. of Solid Waste Mgmt.	May 22, 1989
Signature of Applicant or Agent	Name and Title	Date

Attach letter of authorization if agent is not a governmental official, owner or corporate officer.

B. Professional Engineer registered in Florida.

This is to certify that the engineering features of this waste tire processing facility have been designed/examined by me and found to conform to engineering principals applicable to such facilities. In my professional judgement, this facility, when properly maintained and operated will comply with all applicable statutes of the State of Florida and rules of the Department. It is agreed that the undersigned will provide the applicant with a set of instructions for proper maintenance and operation of the facility.

	P. O. BOX 440
Signature	Mailing address
RICHARD A. BERG, P.E. DIRECTOR OF ENGINEERING LECANTO, FLORIDA	32661-0440

37546	(904) 746-2694
Florida Registration Number	Telephone number

(Please affix seal)

Mail completed form to appropriate district office listed on page 1.

**WASTE TIRE PROCESSING FACILITY
PERMIT APPLICATION**

The Citrus County Division of Solid Waste Management is hereby making an application to the FDER for a Waste Tire Processing Facility Permit in accordance with Rule 17-711.500 F.A.C. Upon receipt of the aforementioned permit, the County intends to use a predetermined portion of the site for the stockpiling and processing of waste tires.

The Citrus County Central Landfill is a 60 acre Class I solid waste management facility operating under FDER Permit #SO09-111795. A temporary stockpile site is shown on the attached site plan and is to be used until the Phase I closure of the landfill site is completed in October of 1989. Also shown is the anticipated stockpile and processing site to be used following closure of that area. This site will be utilized until either the expiration of our operating permit or closure of the entire site, whichever comes first. Prior to the cessation of waste tire processing at this site, an application will be submitted to the FDER requesting permit for waste tire processing at the new 80 acre landfill site.

The following supplemental information is to accompany FDER form #17-711.900(6) for clarification and explanatory purposes:

(1) Attachment I indicates the zoning classifications of the properties within a one (1) mile radius of the existing landfill site. The description of each classification is as follows:

- GU - Government Use
- RR2 - Rural Residential
- CRI0 - Commercial, Residential, Institutional, and Office
- AR - Agricultural Residential
- CG - General Commercial
- RS1 - Residential, Single Family 1
- PD(I)- Planned Development, Industrial

(2) The proposed waste tire processing facility is to be operated within the boundaries of an existing landfill previously permitted by the FDER, SWFWMD, and Citrus County. The land is zoned Government Use (GU) which allows the property to be landfilled, among various other optional uses.

(3) The pocket labelled Attachment II contains a site plan of the 60 acre landfill site. The indicated stockpile and processing area in the south-central section of the site is to be designated for waste tire stockpiling and processing. Waste tires will be stockpiled until approximately 10,000 tires are on hand. At that time, the contracted processing company will process the tires into pieces suitable for disposal. Following processing, the pieces will be disposed of in the nearby Class

III trench in accordance with FDER guidelines.

The landfill site is situated in an area of the County which is removed from any wetlands or water bodies. The site has excellent percolation due to extensive sand deposits. Stormwater controls already in operation consist of swales and retention areas which insure on-site retainage of stormwater.

The legal boundaries of the landfill site are as indicated on the site plan survey. Access to the site is via State Highway 44 right of way. No easements are associated with this project.

There are four operational wells on site. Three of the wells, monitor wells A, B, and C are used primarily for groundwater monitoring in accordance with operating permit requirements. In addition to groundwater monitoring, monitor well D is also used as the landfill supply well. None of the wells provide potable water or are accessible to the public.

All stockpiling and processing will be done outdoors, therefore no structures are proposed with this waste tire processing area. Depending upon the equipment used and the arrangement of the tires, the entire stockpile area may be used for loading and unloading. The existing access road will be utilized until the new road is constructed during phase 1 of closure.

A fence is constructed across the northern boundary of the site with a gate across the entrance to limit access. Vast woodlands, lack of roads, and high berms limit the access on each of the three remaining sides.

(4) Attachment III is a copy of the Emergency Preparedness Guidelines for the Citrus County Central Landfill.

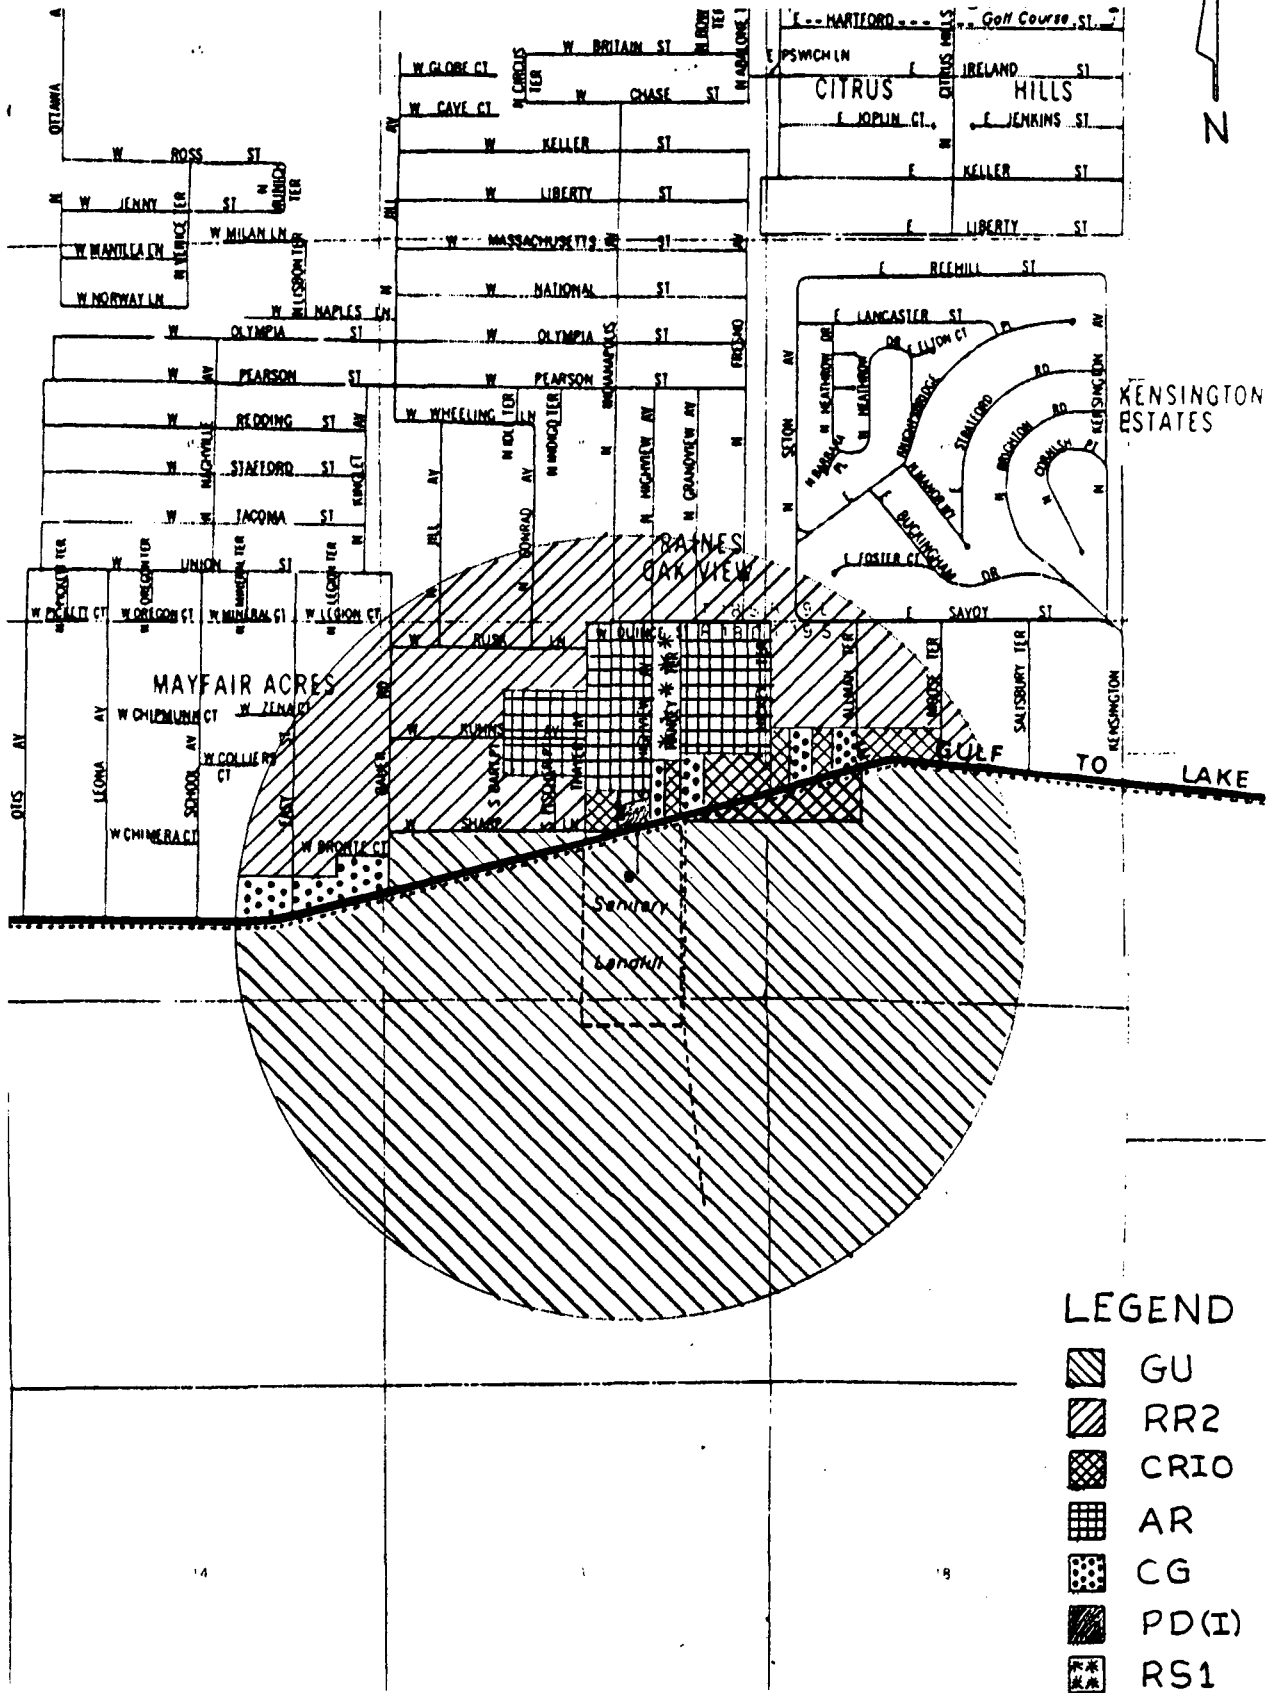

(5) Attachment IV is a copy of the recent fire safety survey for the facility.

(6) Processed tires will be disposed of at the Citrus County Central Landfill, a solid waste management facility operating under FDER Permit #SO09-111795. A closure plan for the entire site has been submitted to and approved by the FDER, therefore modifying the operating permit to allow for closure construction.

(7) Attachment V is a financial responsibility information document.

CITRUS COUNTY CENTRAL LANDFILL

EMERGENCY PREPAREDNESS GUIDELINES

The Citrus County Central Landfill, a government operated Solid Waste Management Facility located approximately five (5) miles west of Inverness, Florida on State Highway 44, has developed these guidelines as a manual for emergency preparedness. In the event of an on-site injury, fire, flood, or other disaster, these guidelines should be followed to assure that the emergency is dealt with in the most effective and expedient manner possible.

In the event of an emergency situation arising or anticipated at the landfill site, certain notifications must be made. If the emergency is dealing with severe personal injury or a fire, the emergency 9-1-1 service should be notified immediately. Following 9-1-1 notification, and in the case of other types of emergencies, certain key County personnel should be notified as soon as possible.

During normal working hours on weekdays, the key contacts are as follows:

Duane "Dusty" Rhodes, Landfill Operations Manager
.....(904) 746-5697
Jim Barker, Director, Division of Solid Waste Mgmt.
.....(904) 746-5000

After hours and on weekends, the following persons should be notified:

Jim Barker, Director, Division of Solid Waste Mgmt.
.....(904) 344-8679
Duane "Dusty" Rhodes, Landfill Operations Manager
.....(904) 489-3211

Notification of one or more of these key personnel concerning any emergency situation at the landfill site will result in notification and direction of applicable staff members and/or response agencies.

PERSONAL INJURY SITUATIONS

Landfill operations, as with other types of heavy construction, provides a potential for personal injury. Formal first aid and emergency preparedness training will take place with all landfill personnel on an annual basis. A first aid kit is available in the break-room to provide the materials necessary for minor personal injuries. All landfill personnel have been made aware of the location of the first aid kit(s) and the proper use of the materials contained therein.

Injuries which warrant hospital care and which are mobile enough for transportation should be transported to the emergency room at Citrus Memorial Hospital in Inverness by either County vehicle or ambulance service. The hospital is within short driving distance of the landfill and, therefore, will be utilized should the need arise.

Should an individual require ambulance service for transportation to the hospital, the emergency 9-1-1 service will be utilized immediately. The caller should be prepared to provide information regarding the landfill location, type of injury and its severity. The caller should also be prepared to take any instruction which may be given by 9-1-1 personnel to care for the injured person until emergency help arrives. The Division office should be notified following any call placed to the emergency 9-1-1 service as soon as the emergency situation permits.

FIRE EMERGENCIES

Should a fire start at the landfill, the emergency 9-1-1 service will be notified immediately. The 9-1-1 operator will notify the proper fire response team for the situation. The landfill does not operate any equipment, other than fire extinguishers, designated for emergency response. As was stated in the personal injury section, the caller should be prepared to provide the operator with the landfill location, types of materials involved in the fire (if possible), extent of fire spreading, and whether any personal injuries are involved in the situation.

Tires which may be involved in a fire at the waste tire site will result in an oily residue. This residue will be removed from the waste tire site along with any contaminated sand and properly disposed of in the Class I disposal area. Any sand removed from the waste tire site will be replaced with clean fill in order to maintain the access and drainage for the site.

Fire extinguishers will be placed in designated locations throughout the landfill site, as directed by the County Fire Prevention office. An annual safety training session will involve fire prevention equipment familiarization. All landfill employees will be introduced to the locations of this equipment and the proper handling of the extinguishers in any given situation. The extinguishers will remain in plain view and should never be obstructed in a way which may limit access to them should an emergency arise.

It should be noted that the decomposition process of the organic matter received at the landfill produces methane gas. This gas can become flammable at various concentration levels and, therefore, should be regarded as a possible fire hazard should a fire begin at the landfill. Any fire other than a small localized situation should result in the evacuation of the entire landfill site until fire safety personnel have properly handled the situation.

FLOOD EMERGENCIES

The topography, elevation, and the soils of the area make the possibility of flooding virtually impossible. Even under hurricane conditions, the area would only be subject to a minimum of localized flooding. Should a hurricane ever occur in this area, certain precautions should be taken. Under normal circumstances the threat of a hurricane is known in time to fully evacuate the site. Should a hurricane be anticipated, all personnel should be alerted and evacuation should begin in time to insure its completion prior to the extreme conditions. All equipment should be positioned at the highest suitable location on the site and any other applicable precautions should be taken to limit damage to the landfill equipment and facilities.

Following a hurricane or hurricane type of flooding emergency, the appropriate actions should be taken to redirect standing stormwater in a way which is acceptable to this office, the South West Florida Water Management District, and the Florida Department of Environmental Regulation. It should be noted that treatment of stormwater which comes in contact with Class I refuse will most probably be required prior to its application to the appropriate portion of the landfill site.

SUMMARY

Emergency situations are a possibility at the landfill site. The operation of this site requires that many materials be handled on a daily basis, six days a week. Fortunately the landfill has operated for quite some time without any major emergency situations arising, but being prepared for any type of emergency situation is a necessary part of each employee's daily duties.

Under severe injury or fire situations, the emergency 9-1-1 service will be notified immediately followed by notification of this office. Minor injuries may be handled on-site by personnel who have been trained to handle such a situation. Small localized fires may be handled by landfill personnel, but should be reported to the Division office as soon as possible. And, in the event of a hurricane, evacuation may be the only alternative and should be followed by appropriate clean-up procedures.

Probably the most important point to be made in these guidelines is the fact that any type of emergency requires being prepared. It is the desire of this office that through annual training/ refresher sessions with up-to-date methods and equipment the staff of the landfill and the staff which supports the operations will be prepared for any emergency situation which may arise.

LECANTO, FLORIDA 32661

Officer:

William M. (Mike) Connell

(904) 746-1335

MEMO:

TO: Jim Barker, Director of Solid Waste

FROM: William G. Hoppert, Captain, Fire Prevention Division *WGH*

DATE: September 12, 1989

SUBJECT: Tire stock pile and processing area in the Citrus County Landfill

Standard Fire Prevention Code 1988, 502.3, Storage of Readily Combustible Materials, 502.3.1, No person shall store in any building or upon any premises in excess of 2500 cu. ft. gross volume of combustible empty packing cases, boxes, barrels, or similar containers, or rubber tires, rubber or cork or other similar combustible material without a permit.

Fire Prevention Code, 1987 Edition, Chapter 3 General Fire Safety Regulations, 3-1.1.10, Required Access for Fire Apparatus, All premises that the fire department may be called upon to protect in case of fire are not readily accessible from public roads shall be provided with suitable gates, access roads, and fire lanes so that one side of all buildings on premises is accessible to fire apparatus aisles between stock piles. Aisles between the tire stock piles shall be 14 feet to allow enough area for firefighter to escape in the event the tire should fall over.

3-5, Fire Protection Required, 3-5.1, Portable Fire Extinguishers, The provision, in installation, and maintenance of portable fire extinguishers shall be as required by the Fire Marshal and the applicable provision of the NFPA codes and standards as listed in Annex A. Recommend a 200 gallon tank with pump and foam capability mounted on a trailer.

3-1.1.11, Smoking, Where condition exist that make smoking a fire hazard on any premises, "No Smoking" signs shall be posted as directed by the Fire Marshal. "No Smoking" signs shall be of a color, size, lettering, and location approved by the Fire Marshal. No person shall remove such "No Smoking" signs or light, or ignite, or otherwise set fire to or smoke any cigar, cigarette, pipe tobacco, or other form of smoldering substance or hold, possess, throw, or deposit any lighted or smoldering substance in any place where occasion or action would constitute a fire or life hazard.
