Attention: Ralph Hedgecoth

Reference: Citrus County Landfill
Batch PACT® Leachate Treatment System

Dear Mr. Hedgecoth:

The batch PACT® system as designed and installed at the Citrus County Landfill can hydraulically treat a flow of 60,000 gpd as long as the treatment system is not organically overloaded. It is our understanding that the excess flow is mainly rainwater and that at 60,000 gpd, the treatment plant will not be organically overloaded. The processing of the increased hydraulic flow can easily be accomplished by increasing the number of batches processed per day.

If we can be of any other assistance or you have any further questions, please contact us.

Sincerely,

ZIMPRO PASSAVANT
