Subject: FDER Permit No. SC29-199393
Permit to Construct and Operate a
Leachate Treatment and Reclamation Facility
Southeast County Facility, Hillsborough County, Florida

Dear Dr. Garrity:

SCS Engineers (SCS) received the permit to construct and operate the Leachate Treatment and Reclamation Facility at the Southeast County Facility (Permit No. SC29-199393), dated April 30, 1992. Upon review of this permit, SCS found a modification that had not been included in any previous drafts or in the notice of intent to issue. Specifically, paragraph 9.c. of the Specific Conditions contains an additional column outlining maximum contaminant levels for grab samples of treated leachate.

SCS was not aware that this additional column would be added to the permit. We do not understand why Hillsborough County or SCS were not given an opportunity to review this modification to the draft permit. We discussed our concerns regarding this matter with Kim Ford on May 5, 1992. We would appreciate an explanation as to why the changes were made without notifying the affected parties.

Very truly yours,

RECEIVED
