EXECUTIVE SUMMARY

Semi-Annual Water Quality Data Report for Trail Ridge Landfill

This semi-annual monitoring report was completed on behalf of Trail Ridge Landfill located in Jacksonville, Duval County, Florida. The data reviewed in this water quality assessment was obtained during the first routine semi-annual detection monitoring event conducted in 2006. The ground water at Trail Ridge is monitored by thirty-seven wells including five background wells. Two surface water sample points and a leachate point are also monitored in accordance with Permit Number 0013493-010-SC. The ground water wells are monitored semi-annually for the detection monitoring parameters listed under Attachment III and Specific Condition 48 of the Permit. The surface water is monitored semi-annually for the detection monitoring parameters listed under Attachment IV and Specific Condition 49 of the above Permit. Leachate is monitored annually and reported during the 2nd semiannual sampling event for the parameters listed in Specific Condition 39 of the Permit.

A detailed review of the monitoring data indicates that iron exceeded the SDWS at 29 of the 37 monitoring wells including four of the five background wells. The levels of iron seen in the ground water at Trail Ridge Landfill result from the interaction of the ground water with the soil mineralogy and are characteristic of the ground water in Duval County. pH in 32 of the 37 wells was below the SDWS of 6.5 S.U. These included four of the five background wells. Methylene Chloride was detected during the original sampling event at concentration above the PDWS at MWB-17(D); subsequent resampling confirmed this compound not to be present above laboratory reporting limits. At MWB-34S TDS exceeded the SDWS. Surface water sample SW-1, the Class III standards for dissolved oxygen, pH, and iron were exceeded, and in SW-2 (background sample) the Class III standard for fecal coliform was exceeded. These constituents have all historically been detected in both up and downgradient surface water samples and are not considered a result of site activities. The remainder of the data meets the water quality standards as dictated by the FDEP. The data reported appears to be consistent with the overall ground water quality and historical data.

Based on recent monitoring well inspections, all of the wells are maintained in good condition. Surface seals, protective casings, well caps, and well locks are in-place and in proper condition at each well to ensure that samples collected from the wells are representative of the aquifer conditions. Trail Ridge Landfill will continue to closely monitor the facility and evaluate the water data obtained during detection monitoring to ensure that there are no water quality exceedances.

1.0 INTRODUCTION

This semi-annual ground water monitoring report is submitted on behalf of Trail Ridge Landfill located in Jacksonville, Florida. Trail Ridge Landfill is located on US Highway 301, in the western portion of Duval County, Florida. It is located at 5110 U.S. Highway 301 in Baldwin, Florida. The landfill is about 4 1/2 miles south of the intersection of US 301 and I-10. Trail Ridge is an active municipal solid waste landfill owned by the City of Jacksonville and operated by Waste Management. Operation of the Landfill is in accordance with the Permit Number 0013493-010-SC, issued December 19, 2003 and the applicable provisions of previous permits.

The data submitted in this ground water quality assessment was obtained during the routine semi-annual detection-monitoring event conducted on February 22-24, 2006. During this monitoring period, ground water wells were monitored for the parameters listed in Attachment III of the current permit. In conjunction with the ground water monitoring, surface water samples were collected and analyzed for the parameters listed in Attachment IV of the permit.

The ground water and surface water monitoring program at the Trail Ridge Landfill incorporates monitoring elements to provide environmental protection post closure. All field work, sampling methodologies, data evaluation, data QA/QC, and laboratory analyses were conducted in accordance with the site permit, and the sample team and National Environmental Laboratory Accreditation Conference (NELAC) standards.

1.1 Background

As identified in the following tables, thirty-seven wells comprise the facilities routine monitoring system with an additional nine wells that are maintained but only sampled if required for assessment monitoring. Five of the thirty-seven wells are designated background wells, seven wells are designated detection wells and twenty-five are designated as compliance wells. An additional nine compliance wells are part of the permitted groundwater monitoring system but in accordance with Specific Condition 48 of the permit not utilized unless required for assessment monitoring. Monitoring well designations are shown in the following tables.

The monitoring wells are installed around the perimeter of the landfill and are screened in three zones within the Surficial Aquifer (Shallow, Intermediate, and Deep zones). The monitoring wells are sampled and analyzed semi-annually for the parameters listed in Attachment III of the permit. Sampling is required by permit to be conducted prior to March 30, and September 30 of each year, with reports submitted to the FDEP for each sampling period no later than April 15 and October 15 each year. A 2-week extension was requested and approved by the FDEP to allow resample results to be incorporated into this report.

Surface water flow at the site mimics topography, with runoff in a predominantly eastward direction and drainage features trending west-east. There are two surface water monitoring sites (designated SW-1 and SW-2). Monitoring location SW-1 is located in a wetland, approximately 200 feet east of the landfill's

stormwater retention pond. Monitoring location SW-2 is located in a west-east trending drainage feature, approximately 500 feet north of the landfill. SW-2 is considered a background sampling location, since it does not receive run-off directly from the landfill area. In accordance with Chapter 62-701, FAC, surface water monitoring is performed on a semi-annual basis in conjunction with the groundwater monitoring schedule.

In accordance with Specific Condition 39 of the operating permit, leachate is sampled annually prior to September 30 and analyzed. Two samples are collected a composite sample (from tanks 1-5 designated LCS) and a sample of secondary leachate collection system (tank 6 designated LDSS). These samples are analyzed for the parameters listed in Specific Condition 39. Leachate sampling is conducted during the second semiannual sampling event.

Leachate collection pipes that lie on top of the primary liner terminate at the leachate collection sumps. These sumps also collect any leachate flowing along the secondary leak detection system. The sump is designed so that the leachate from the primary and secondary systems is separated. Therefore, it is necessary to have two pumps in each sump, one for the primary leachate collection system and one for the secondary leachate collection system.

The leachate is pumped from the sumps through primary and secondary force mains to six 20,000-gallon storage tanks. Tanks 1 through 5 (interconnected) receive the leachate collected from all of the primary leachate collection sumps via one force main. Tank 6 receives leachate that is pumped through a separate force main from the secondary leachate collection sumps. Previous sampling procedures required sampling of all six tanks. However, since tanks 1 through 5 contain the same leachate, sampling procedures were reduced during the 1997 permit renewal for the site to the collection of two (2) samples (one for the secondary leachate collection tank and one composite sample of the five primary leachate collection tanks).

In accordance with Specific Condition 14, gas condensate from the pump station is sampled semiannually for Toxicity Characteristic Leaching Procedure (TCLP) parameters with the results submitted to the FDEP no later than June 30 and December 31 of each year.

In a letter dated June 15, 2004, FDEP concurred with the site Contamination Evaluation Plan and follow-up letter requesting that the site return to Detection Monitoring and to terminate sampling of the compliance wells. However, because of the timing of this letter and the sample event, compliance wells MWB14S and MWB23S were sampled by the site (e.g. the laboratory sent sample kits). The results show that VOCs were not detected in these samples, further confirming the findings of the evaluation plan. As approved and unless otherwise required by FDEP, these compliance wells will not be sampled during future events and the site has returned to detection monitoring.

Biennial Water Quality Reports are submitted to the FDEP every two years. The last Biennial report was submitted to the Department on September 30, 2005. The facility's permit expires on November 25, 2007 and consistent with Specific Condition 48(m), groundwater samples collected during this event are to be analyzed for the expanded parameter list on Attachment 2 of the permit.

2.0 GROUND WATER MONITORING DATA

The following section contains an evaluation of the ground water monitoring data. The ground water data from each of the compliance wells is compared to the background ground water quality and the applicable water quality standards.

Professional Technical Support Services, Inc. (Pro-Tech) conducted the field activities at the Trail Ridge Landfill, in which ground water elevation data, field measurements, and samples for laboratory analyses were collected. STL-Tampa conducted the laboratory analyses. The FDEP Semi-Annual Ground Water Parameter Monitoring Report forms have been completed and are included in Appendix A. The laboratory reports for the ground water samples are included in Appendix B.

2.1 Field Data

On February 22-24, 2006, Pro-Tech completed the field activities at Trail Ridge Landfill. The field measurements, sample collection, and sample preservation were conducted in accordance with Rule 62-160, F.A.C. and the FDEP Standard Operating Procedures. Prior to purging, depth to water and water level elevations were recorded to the nearest hundredth of a foot from a surveyed reference datum. The water level measurements were utilized for determining water volumes in the well casing and for preparation of ground water contour maps (Figures 1-3) used to determine ground water flow direction and gradient at the site.

The average horizontal gradient across the site indicates that groundwater flow directions and gradients in the three zones are very similar, with the deep zone, on average, having a slightly flatter gradient than the intermediate and shallow zones. It is noted that this observation may at least partially be a result of having fewer data points for the deep zone, resulting in larger interpolations between data points than in the shallow zone. There were no obvious seasonal trends in gradient fluctuations. As noted in previous reports, groundwater flow direction in all three zones is predominantly eastward. Current data reflects little change or variation in flow direction in any of the three zones.

Bladder pumps were used to evacuate a minimum of three well volumes of fluid from within each monitoring well, with exception of monitoring well MWB-13S, which (as typical) was pumped dry after 1.2 well volumes (2.4 gallons). Following completion of purging activities, samples were collected from the wells using the bladder pumps. During sampling, field parameters including dissolved oxygen, pH, temperature, turbidity, specific conductance, and physical characteristics of the water samples, as well as the meteorological conditions at the time of sampling were noted on the field forms with the field data (Appendix C). Following collection of samples into laboratory provided containers and ice chests; the samples were forwarded to the contract laboratory under signed chain of custody documentation. Trip blanks were submitted for laboratory analyses with the samples.

A review of the field data shows that turbidity measurement reported in monitoring wells MWB-11IR (46.7 NTU), MWB-19(I) (27.3 NTU), MWB-32S (31.9 NTU), MWB-32I (236.1 NTU), and MWB-32(D) (115.1

NTU). The ground water turbidity levels in all other wells that were sampled were below 20 NTU at each of the ground water wells sampled during this monitoring period. These turbidity levels are consistent with historic sampling events, with the exception of MWB-32(D), which has increased from past events. Care will be taken next event to minimize turbidity, if unsuccessful, MWB-32(I) and MWB-32(D) will be redeveloped.

The pH levels reported for the groundwater samples collected at four background wells (MWB-2(S), MWB-3(S), MWB-2(I) and MWB-3(I)) and 28 compliance/detection wells (MWB-7(S), MWB-7(I), MWB-11(S), MWB-11(IR), MWB-12(S), MWB-12(I), MWB-13(S), MWB-13(I), MWB-17(S), MWB-17(I), MWB-17(D), MWB-19(S), MWB-19(I), MWB-20(S), MWB-21(S), MWB-22(S), MWB-27(S), MWB-27(I), MWB-27(D), MWB-29(S), MWB-29(I), MWB-29(D), MWB-32(S), MWB-32(I), MWB-32(D), MWB-33(S), and MWB-34(I)) were below the SDWS specified range of 6.5–8.5 SU. Based on historical data, such pH levels are characteristic of the site.

2.2 Laboratory Parameters

The ground water samples collected from the site were transferred to Severn Trent Laboratories, Inc. (STL-Tampa) for analyses. The laboratory analyses including the quality control procedures have been conducted in accordance with Rule 62-160, F.A.C. Samples submitted were analyzed within the required holding times, unless otherwise noted in the laboratory reports. Quality control exceedances are discussed in the narrative portion of the laboratory reports for each lot of samples obtained. The monitoring parameters were compared to the ground water quality standards as designated in 62-550.310 and 62-550.320, F.A.C.

A review of the ground water data notes that:

- Total iron exceeded the FDEP secondary ground water quality standard of 300 µg/L at four background monitoring wells (MWB-2(I), MWB-2(S), MWB-3(S), MWB-3(I)) and twenty-five compliance/detection wells (MWB-7(I), MWB-11(S), MWB-11(IR), MWB-12(I), MWB-12(D), MWB-13(S), MWB-13(I), MWB-17(I), MWB-17(D), MWB-19(S), MWB-19(I), MWB-19(D), MWB-20(S), MWB-21(S), MWB-27(I), MWB-27(D), MWB-29(S), MWB-29(I), MWB-29(D), MWB-32(S), MWB-32(I), MWB-32(D), MWB-33(S), MWB-34(I), and MWB-34(D)). Iron concentrations have historically been reported above the SDWS at this site and are considered to be reflective of natural groundwater conditions in the area. Iron was reported above the SDWS in four of the five background wells. As previously discussed turbidity levels of many of these samples were elevated which will bias results high.

- Vinyl chloride was not detected in MW-34(S). This combined with the last four events makes five events where the vinyl chloride concentration was below the FPDWS. The site appears to have addressed and mitigated the vinyl chloride detections.

- During the original sampling event, several volatile organic compounds (VOCs) were detected at low levels. Those VOCs detected consisted of:

- The sample collected from MWB-2(S), Toluene was detected at trace levels (0.54 I ug/L) below the laboratory reporting limit.
- Methylene Chloride was detected at the sample collected from MWB-17(D) at 18 ug/L, at a concentration above the primary drinking water standard. Subsequent resampling confirmed this compound was not present (see Appendix H & I) confirming this compound was not present in concentrations above the laboratory reporting limit.
- Benzene was detected at trace levels (0.52 I ug/L) below the laboratory reporting limit from the sample collected from MW-34(S).

- During the sampling event at MWB-34(S) several compounds were detected at concentrations exceeding secondary drinking water standards. These compounds detected include:
  - TDS was detected during the original sampling event at 520 mg/L, slightly above the SDWS of 500 mg/L. TDS concentrations appear to have decreased since the last sampling event.
  - Ammonia was detected during the original sampling event at 16 mg/L, above the background (typically less than 0.5 mg/L). The ammonia concentrations at MWB-34(S) appear to be decreasing since the 1st event in 2005.
  - We note that repairs were made to the leachate piping system last summer immediately adjacent to MWB-34(S). These low-level detections may be related to the repairs on the adjacent leachate line that were completed recently. Continued semiannual monitoring to confirm the downward trends and verify that the repairs were successful is warranted. The next scheduled sampling event is in the summer of 2006.

- All other ground water data are below ground water quality standards and are consistent with the historical data obtained.

3.0 SURFACE WATER MONITORING DATA

The following section contains an evaluation of the surface water monitoring data. The surface water data is compared to the applicable water quality standards. The FDEP Semi-Annual Surface Water Parameter Monitoring Report forms have been completed and are included in Appendix D. The laboratory reports for the surface water samples are included in Appendix E.

A review of the surface water data notes that:

- Of the volatile organic compounds (VOCs) monitored for, none were detected above the laboratory reporting limits.

- Total iron exceeded the FDEP Class III surface water standard of 1000 µg/L at surface water sample point SW-1 (1,500 µg/L).

- pH exceeded the lower end of the FDEP Class III surface water standard of 6 SU at surface water sample points SW-1 (4.59 SU) and SW-2 (4.35 SU). These values are consistent with background water quality in this area;

- Dissolved oxygen measured in the field at SW-1 (4.1 mg/L.) exceeded the FDEP secondary water quality standard of 5.0 mg/L;

- At SW-2 (background) Fecal Coliform bacteria exceeded the monthly Class III Surface water standard of 200 cfu/100ml. The reported concentration was 1265 cfu/100ml. The presence of birds has been noted at this sampling site. Birds are likely the source of the detected fecal coliform bacteria. Analytical data does not suggest any impacts to surface water.

- Exceedances of regulatory standards (Chapter 62-302, FAC for Florida Class III Surface Waters) were noted in the surface water samples collected at the site. In SW-1, the regulatory standards for dissolved oxygen, pH, and iron were exceeded, and in SW-2 the regulatory standard for fecal coliform bacteria was exceeded. It is noted that most of these constituents have been detected before at the site and that they are not considered a result of site activities. As these constituents have all been historically detected in both sample locations (i.e., upgradient and downgradient) they are not considered a result of site activities and therefore, no additional action is recommended beyond the routine semiannual monitoring.

All other surface water data are below ground water quality standards and are consistent with the historical data obtained.

4.0 LEACHATE AND CONDENSATE MONITORING DATA

In accordance with Specific Condition 39 of the permit, leachate is sampled annually prior to September 30 and analyzed. Two samples are collected a composite sample (from tanks 1-5 designated LCS), and a sample of secondary leachate collection system (tank 6 designated LDSS) and analyzed for the parameters listed in Specific Condition 39. Leachate samples will be collected during the summer 2006 sampling event. Previously, no exceedances of regulatory standards (40 CFR Part 261) have been noted in the leachate samples collected for analysis. In accordance with the permit, leachate is sampled and analyzed during the second semiannual sampling event.

In accordance with Specific Condition 14, gas condensate from the pump station was sampled for TCLP parameters with the results submitted to the Department no later than June 30 and December 31 of each year. No exceedances of regulatory standards (40 CFR Part 261) were noted in the condensate sample collected for analysis. During analysis of the original sample VOC's were analyzed by an incorrect method and therefore condensate was resampled and analyzed, the results again demonstrated no exceedances of regulatory standards (40 CFR Part 261).

5.0 SUMMARY

The data obtained during the first semi-annual monitoring event in 2006 at Trail Ridge Landfill are generally consistent with the historical data. The only constituents routinely exceeding a ground water quality standard are total iron and pH. These detections are consistent with background water quality. There was a VOC detection in well MWB-17D however resampling indicated the compound not to be present. Well MWB-34(S) indicated trace concentrations (below the PDWS and below the PQL) of benzene, TDS slightly exceeded the SDWS. Continued semiannual monitoring is recommended to track and confirm the downward trends in TDS and ammonia in MW-34(S). Total Iron, dissolved oxygen, pH, and fecal coliform were the only parameters exceeding FDEP surface water standards in the surface water samples. These constituents have all historically been detected in both up and downgradient surface water samples and are not considered a result of site activities. The remainder of the data is below ground water quality standards and is consistent with historical data. The monitoring well network continues to adequately monitor the landfill.

DATA REPORTING QUALIFIERS

Client: HDR Engineering Job Number: 660-7427-1

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
GC Semi VOA		
	J3	Estimated value; value may not be accurate. The reported value fails to meet the established quality control criteria for either precision or accuracy.
	U	Indicates that the compound was analyzed for but not detected.
Metals		
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
General Chemistry		
	U	Indicates that the compound was analyzed for but not detected.

Case Narrative:	STL Project 660-7387
Client:	HDR Engineering
Project:	Trail Ridge Landfill
Laboratory:	STL Tampa

Sixteen liquid samples and a trip blank were received on February 23, 2006 and logged in as STL Project 660-7387.

TDS

The original results for TDS on samples MWB29I, MWB29S and MWB2I were reported non detect at 5.0 U mg/l. Due to the correlation between chloride and TDS the lab re analyzed these samples for TDS and the results were higher than originally reported. We are reporting the re analyzed results. The samples were re analyzed after the EPA recommended hold time had exceeded. The results are flagged with a "Q".

DATA REPORTING QUALIFIERS

Client: HDR Engineering Job Number: 660-7387-1

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
GC Semi VOA		
	U	Indicates that the compound was analyzed for but not detected.
Metals		
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
General Chemistry		
	U	Indicates that the compound was analyzed for but not detected.
	Q	Sample held beyond the accepted holding time.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	NA	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True

Quality Assurance Qualifiers:

U The compound was analyzed for but not detected.

Definitions:

Water matrix refers to all aqueous matrices except drinking water, including but not limited to, wastewater, ground water, surface water, aqueous wastes and leach
Soil matrix refers to all non-aqueous matrices, including soils, solids, sludges, semi-solids, and non-aqueous waste samples
All results in mg/kg or % are reported in dry weight basis, unless notated otherwise. All results in mg/L are reported in wet weight basis.
MDL Method Detection Limit, without correction for dilution or moisture content
Adjusted Reporting Limit is the MDL accounting for all dilutions and moisture content cacluations.
PQL is defined to be 4 times the MDL, for all results qualified with a 'i' qualifier.
Sampling Method; G=Grab, P=Pump, C=Composite

ANALYTICAL REPORT

Job Number: 660-7458-1

Job Description: Trail Ridge

For:
HDR Engineering
200 W. Forsyth St., Suite 800
Jacksonville, FL 32202

Attention: Mr. Brad Stone

Nancy Robertson
Project Manager II
nrobertson@stl-inc.com

Project Manager: Nancy Robertson

DOH Certification #: E84282
These test results meet all the requirements of NELAC. All questions regarding this test report should be directed to the STL Project Manager who signed this test report. The estimated uncertainty associated with these reported results is available upon request.

SEVERN TRENT STL®

Case Narrative:	STL Project 660-7458
Client:	HDR Engineering
Project:	Trail Ridge Landfill COND
Laboratory:	STL Tampa

One liquid sample was received on February 25, 2006 and logged in as STL Project 660-7458.

TCLP 8260
Due to a laboratory error, the sample COND was analyzed for total volatiles and not TCLP volatiles. Although the results were below the TCLP limits, the client will re sample for TCLP volatiles.

FIELD INFORMATION FORM

WASTE MANAGEMENT

Site Name: TRAIL RIDGE LANDFILL

Site ...

Sample Point: COND (Sample ID)

This Waste Management Field Information Form is Required
This form is to be completed, in addition to any State Forms. The Field Form is submitted along with the Chain of Custody Forms that accompany the sample containers (i.e. with the cooler that is returned to the laboratory).

DATA REPORTING QUALIFIERS

Client: HDR Engineering

Job Number: 660-8365-1

Lab Section	Qualifier	Description
GC/MS VOA		
	U	Indicates that the compound was analyzed for but not detected.
	L	Off-scale high. Actual value is known to be greater than the value given.
Metals		
	U	Indicates that the compound was analyzed for but not detected.
General Chemistry		
	J3	Estimated value; value may not be accurate. The reported value fails to meet the established quality control criteria for either precision or accuracy.
	U	Indicates that the compound was analyzed for but not detected.
	I	The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

Sample Tube Type: — A-Teflon, B-Stainless Steel, C-PVC, D-Polypropylene, X-Other: _____

WELL DATA

Well Elevation (at TOC) (ft/msl)	Depth to Water (DTW) (from TOC) (ft)	Groundwater Elevation (site datum, from TOC) (ft/msl)

Total Well Depth (from TOC) (ft)	Stick Up (from ground elevation) (ft)	Casing ID (in)	Casing Material

Note: Total Well Depth, Stick Up, Casing Id, etc. are optional and can be from historical data, unless required by Site/Permit. Well Elevation, DTW, and Groundwater Elevation must be current.

STABILIZATION DATA (Optional)

Sample Time (2400 Hr Clock)	Rate/Unit	pH (std)	Conductance (SC/EC) (µmhos/cm @ 25 °C)	Temp. (°C)	Turbidity (ntu)	D.O. (mg/L - ppm)	eH/ORP (mV)	DTW (ft)

	4th	4th	4th					
Suggested range for 3 consec. readings or note Permit/State requirements:		+/- 0.2	+/- 3%	--	--	+/- 10%	+/- 25 mV	Stabilize

Stabilization Data Fields are Optional *(i.e. complete stabilization readings for parameters required by WM, Site, or State). These fields can be used where four (4) field measurements are required by State/Permit/Site. If a Data Logger or other Electronic format is used, fill in final readings below and submit electronic data separately to Site. If more fields above are needed, use separate sheet or form.*

FIELD DATA

SAMPLE DATE (MM DD YY)	pH (std)	CONDUCTANCE (umhos/cm @ 25°C)	TEMP. (°C)	TURBIDITY (ntu)	DO (mg/L-ppm)	eH/ORP (mV)	Other: _____ Units _____
04/10/06	7.29	5282	28.0	6.8			

Final Field Readings are required *(i.e. record field measurements, final stabilized readings, passive sample readings before sampling for all field parameters required by State/Permit/Site.*

FIELD COMMENTS

Sample Appearance: CLEAR Odor: YES Color: NONE Other: NO SHEEN

Weather Conditions (required daily, or as conditions change): Direction/Speed: E/S-10 Outlook: CLEAR, 78°F Precipitation: Y or (N)

Specific Comments (including purge/well volume calculations if required): _____

Question	T/F/NA	Comment
Radioactivity either was not measured or, if measured, is at or below background	NA	
The cooler's custody seal, if present, is intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
There are no discrepancies between the sample IDs on the containers and the COC.	True	
Samples are received within Holding Time.	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
VOA sample vials do not have headspace or bubble is <6mm (1/4") in diameter.	True	
If necessary, staff have been informed of any short hold time or quick TAT needs	True	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True
