Tallahassee, Florida 32399

Subject: J.E.D. Solid Waste Disposal Facility  
Abandonment and Replacement Water Quality Monitoring Wells MW-17R, 24, 25, 26  
Progressive Waste Solutions of FL, Inc.  
1501 Omni Way  
St. Cloud, Florida  
WACS Facility ID 89544

Dear Mr. Moore:

On behalf of Omni Waste of Osceola County, LLC (Omni), Weibu, LLC (Weibu) has prepared this report to the Florida Department of Environmental Protection (FDEP) summarizing the results of the initial water quality monitoring event performed at the J.E.D. Solid Waste Management Facility (JED) for monitoring well clusters MW-17R (A&B), MW-24 (A&B), MW-25 (A&B), and MW-26 (A&B). The results for this initial water quality monitoring event are provided in accordance with Rule 62-701.510(6)(b) of the Florida Administrative Code (FAC) and conditions of the facility's Monitoring Plan Implementation Schedule (MPIS), dated January 23, 2014, and Operating Permit Number SO49-0199726-022.

Should you have any questions or comments regarding activities completed as part of the plugging, abandonment and replacement of select monitor well clusters, please contact Mr. Mike Kaiser at (904) 673-0446, [michael.kaiser@progressivewaste.com](mailto:michael.kaiser@progressivewaste.com) or the undersigned at (813) 468-7553.

Sincerely,

Weibu, LLC  
Donald Thompson, PG (1946)

Orlando, Florida 32803-3767

Subject: J.E.D. Solid Waste Management Facility  
Initial Water Quality Monitoring Event for MW-17R (A&B), MW-24 (A&B), MW-25 (A&B),  
and MW-26 (A&B)  
Omni Waste of Osceola County, LLC  
1501 Omni Way  
St. Cloud, Florida  
WACS Facility ID 89544

Dear Mr. Lubozynski:

On behalf of Omni Waste of Osceola County, LLC (Omni), Weibu, LLC (Weibu) has prepared this report to the Florida Department of Environmental Protection (FDEP) summarizing the results of the initial water quality monitoring event performed at the J.E.D. Solid Waste Management Facility (JED) for monitoring well clusters MW-17R (A&B), MW-24 (A&B), MW-25 (A&B), and MW-26 (A&B). The results for this initial water quality monitoring event are provided in accordance with Rule 62-701.510(6)(b) of the Florida Administrative Code (FAC) and conditions of the facility's Monitoring Plan Implementation Schedule (MPIS), dated January 23, 2014, and Operating Permit Number SO49-0199726-022. The remainder of this report includes: (i) project background; (ii) monitoring well sampling information; (iii) sample analyses; (iv) summary of the analytical results; and (v) closure.

### **Project Background**

Omni recently completed construction of the Phase 4 Stormwater Management System and Cell 10 disposal area as authorized by facility permits. New well clusters MW-24, MW-25 and MW-26 were installed on the Phase 4 Stormwater Management System berm and replacement well cluster MW-17R was installed at a permanent location near the Cell 10 sump area.

The horizontal and vertical location(s) of the newly completed monitor well clusters were surveyed by Peavey and Associates on July 17, 2014. Table 1 shows a summary of the survey data and groundwater elevations for each well and locations are shown on Figure 1.

## Monitoring Well Sampling

Low-flow sampling techniques were utilized as part of this groundwater quality sampling and data collection event. All field activities were completed in conformance with the current applicable FDEP Standard Operating Procedures (DEP-SOP-001-01, December 2008) for groundwater sampling. The Groundwater Monitoring Report Form 62-701.900(31) is presented in Appendix A.

During the purging process, a YSI 556 water quality meter equipped with a flow-through cell was used to monitor the following field parameters: pH; temperature; field conductivity; oxidation-reduction potential (ORP); and dissolved oxygen. Turbidity levels were measured using a LaMotte 2020e turbidity meter. Field parameters were recorded on sample collection forms, which are contained in Appendix B. Observations pertaining to the color of the groundwater samples collected were also noted on the sample collection forms. When the field parameters stabilized within the acceptable tolerances required by the FDEP SOP, well purging was considered complete and groundwater samples were collected.

### *Turbidity Issues*

As with previous well purging and sampling activities, including sampling of monitoring wells as part of the initial site development, formation materials encountered were generally described as fine to silty-fine in texture. These formation materials consist primarily of a brown to dark brown, fine, silty-sand that generally fine downward. As a result, fine-grained and colloidal material are able to pass through the sand filter pack as well as, the well screens that are constructed using the smallest commercially available screen slot size (0.006 in.).

It is typical on this site for newly installed wells, particularly in the B-zone and C-zone (ie., deeper screen interval zones) to have turbidity values in excess of the 20 nephelometric turbidity unit (NTU) criterion even after extended well development and removal of multiple well volumes. This issue has been reported and noted in all of the previous water quality monitoring reports and will likely continue as the monitoring network is expanded in accordance with the MPIS.

During the initial well development of the newly installed site monitor wells cumulative purge volumes varied from 60 to approximately 500-gallons. The lowest cumulative well development and purge volumes were noted in the shallow, A-Zone wells. This was not unexpected since, formation materials encountered during drilling were described as fining downward. Therefore, the potential for extremely fine grained and colloidal materials entering the well screen are increased with depth of well completion. An extreme example of this phenomenon was noted in MW-26B which had nearly 500-gallons of water initially developed from the well prior to sampling. The final measured turbidity during development was noted as 200-NTU (Figure 2). Furthermore, an additional 90-gallons of water was purged from the well location during water-quality sampling with a final measured turbidity of 300-NTU. This behavior was noted in all of the newly installed monitoring wells. The least problematic wells as it relates to turbidity issues were noted as MW-17AR and MW-24A. As with previous sampling events, turbidity levels will likely decrease in the remaining wells as additional volumes are pumped to acquire samples. It is likely that multiple sampling and purging events will be needed to fully develop the screen and filter pack within the deeper zone wells. A scaled dot-plot was developed to provide a graphic comparison of turbidity measurements of current and previous water quality monitoring events (Figure 3). These data

compare favorably and further suggest that a general decrease in turbidity levels will occur during subsequent water quality sampling and monitoring events.

Monitor wells were sampled using two primary pumping methods and pump types which included; a stainless steel bodied submersible pump and a standard peristaltic pump. The submersible pump was decontaminated between well locations using a series of cleaning agents and steps to ensure sample integrity. In addition, down-hole tubing was changed after the collection of water samples in individual wells to ensure sample and data integrity. Monitor well cluster MW-17R was purged and sampled using a stainless steel submersible pump, all sample aliquots were filled directly from the down-well tubing. All remaining wells were purged and sampled using a peristaltic pump, with sample aliquots filled consistent with DEP-SOP-001-01.

The calibration of the water quality monitoring instruments was checked prior to commencing monitoring activities and at the completion of the sampling event. Water quality instrument calibration forms are presented in Appendix C. Samples were placed in coolers and packed with bagged ice for transport to the analytical laboratory. Chain-of-Custody (COC) forms were completed and accompanied the samples to the analytical laboratory. All COC forms are included in Appendix D. Trip blank samples accompanied all sample coolers with VOC samples. Temperature blanks were packed in each sample cooler and security seals were affixed to every cooler shipped.

### **Sample Analysis**

Samples were analyzed by ALS Group USA (fka Columbia Analytical Services, Inc. of Jacksonville, Florida) [ALS] in accordance with the National Environmental Laboratory Accreditation Conference (NELAC) standards. ALS holds certification from the Florida Department of Health (FDOH) for the analytical test methods used for this project and is certified in the State of Florida for analysis of environmental samples.

Groundwater samples were analyzed for total ammonia as nitrogen, chlorides, nitrate, total dissolved solids (TDS), iron, mercury, sodium, and the parameters listed in 40 CFR Part 258 Appendix I and Appendix II. Other required parameters (i.e., pH, temperature, conductivity, turbidity, ORP, and dissolved oxygen) were measured in the field during collection of the groundwater samples.

## Summary of Analytical Results

All analytical results collected as part of this initial water-quality sampling event are presented in Appendix E. Table 2 summarizes the parameters with detections above the method reporting limits. Any parameters exceeding the groundwater cleanup target levels (GCTL) or secondary drinking water standards (SDWS) are highlighted green (in Table 2) and are discussed below;

- pH - The groundwater pH was below the SDWS of 6.5 to 8.5 (standard units) in eight of the monitoring wells. The reported values ranged from 4.94 to 5.49. The groundwater pH values measured at the site have historically been below the SDWS lower limit of 6.5 standard units. Interestingly enough, reported values of the chemical composition of precipitation from a statewide network yielded an average value of pH of 4.77 (Table 3-Florida Geological Survey-Special Publication No. 34, 1992). These data clearly suggest that the pH excursions are likely a reflection of precipitation and indicate no impacts from landfill operations.
- Iron – The GCTL for iron (300 µg/L) was exceeded in nearly all of the samples collected from the newly installed wells. The highest concentration was reported in MW-25A and was noted at 5,900 ug/L with the lowest concentration noted in MW-17AR at 280 ug/L. The cause of elevated iron concentrations is most likely a consequence of the oxidation-reduction conditions in the aquifer that results in an increase in the more soluble (ferrous) iron concentrations. The source of the iron is likely naturally occurring and is a common occurrence throughout much of the State of Florida and has been reported as part of efforts to characterize background water quality for the surficial aquifer system (SAS). Statewide, 75% of the wells sampled as part of the background water quality monitoring efforts indicated exceedances in the iron above the GCTL. Furthermore, the median of reported value of total iron concentration as noted in 376 samples collected as part of the background monitoring program for the SAS was 880 ug/L (Table 14- Florida Geological Survey-Special Publication No. 34, 1992).

Groundwater excursions identified as part of this initial water quality sampling event do not indicate any impact from landfill operations. The results correspond well with previous sampling events as required by the current Permit and MPIS. Noting that turbidity issues have been identified and discussed in detail as to their cause and eventual mitigation and exceedances of select analytes which have been noted throughout the period-of-record for groundwater quality.

Specific discussions in regards to remaining analytes as contained in the 40 CFR Part 258 Appendix I and Appendix II lists were not completed since, there were no reported detections above applicable GCTL or significant detections above the individual method reporting limits. A comprehensive list of analytical laboratory results are included in Appendix E which included:

- Volatile Organic Compounds by EPA Method 8260B;
- Semivolatile Organic Compounds by EPA Method 8270C;
- Base Neutral Semivolatile Organic Compounds by EPA Method 8270C SIM;
- Select Pesticides and Halomethanes by EPA Method 8011;
- Organochlorine Pesticides by EPA Method 8081A;

JED Solid Waste Management Facility  
Baseline Water Quality Sampling Event (MW-17R, MW-24, 25, and 26)  
October 31, 2014  
Page 5 of 5

- Polychlorinated Biphenyls (PCBs) by EPA Method 8082;
- Inorganics by EPA Methods 6010B/6020 and 7470A; and,
- General Chemistry parameters EPA Methods 300/335.4/350.1, SM 2540C, and SM 4500-S2-F.

### Closure

The initial water quality monitoring results for recently completed wells included in the Phase IV expansion area are provided in accordance with the permit and FAC. Should you have comments or questions regarding the information presented in this report, please contact Mr. Mike Kaiser at (904) 673-0446, [michael.kaiser@progressivewaste.com](mailto:michael.kaiser@progressivewaste.com) or the undersigned at (813) 468-7553.

Sincerely,

Weibu, LLC

## WATER QUALITY MONITORING CERTIFICATION

### PART I GENERAL INFORMATION

(1) Facility Name J.E.D. Solid Waste Management Facility

Address 1501 Omni Way

City Saint Cloud

Zip 34773

County Osceola

Telephone Number (407) 891-3720

(2) WACS Facility ID 89544

(3) DEP Permit Number SC49-0199726-017 & SO49-0199726-022

(4) Authorized Representative's Name Mike Kaiser Title Southeast Region Engineer

Address 1099 Miller Drive

City Altamonte Springs

Zip 32701

County Seminole

Telephone Number (904) 673-0446

Email address (if available) michael.kaiser@progressivewaste.com

### CERTIFICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submission of false information including the possibility of fine and imprisonment.

Service Request No J1405085

Kirk Wills  
Waste Services of Florida, Inc.  
11500 43rd Street North  
Clearwater, FL 33762

### Laboratory Results for: JED SWDF (New Wells)

Dear Kirk,

Enclosed are the results of the sample(s) submitted to our laboratory July 11, 2014  
For your reference, these analyses have been assigned our service request number **J1405085**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. In accordance to the NELAC 2003 Standard, a statement on the estimated uncertainty of measurement of any quantitative analysis will be supplied upon request.

Please contact me if you have any questions. My extension is 4409. You may also contact me via email at [Craig.Myers@alsglobal.com](mailto:Craig.Myers@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

## CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables, including results of C samples analyzed from this delivery group. When appropriate to the procedure, method blank results have been reported with each analytical test. Analytical procedures performed by the lab are validated in accordance with NELAC standards. Parameters that are included in the NELAC Fields of Testing but are not included in the lab's NELAC accreditation are identified in the discussion of each analytical procedure.

### Sample Receipt

Two water samples and one trip blank were received for analysis at ALS Environmental on 07/11/2014. The samples were received in good condition and consistent with the accompanying chain of custody form. Samples are refrigerated at \_6 C upon receipt at the lab except for aqueous samples designated for metals analyses, which are stored at room temperature.

### Volatile Organic Analyses:

No significant data anomalies were noted with this analysis.

### Semi-Volatile Organic Analyses:

No significant data anomalies were noted with this analysis.

### Metals Analyses:

No significant data anomalies were noted with this analysis.

### General Chemistry Analyses:

No significant data anomalies were noted with this analysis.

### Report Revision Notes and Discussion:

This revision is provided to correct the sample ID for J1405085-001 per client request. The correct ID should be MW-17AR, not MW-17AK.

The second revision is provided to remove the Aluminum results per client request.

Approved by

A handwritten signature in black ink, appearing to read "Amy R. Miller".

## **Data Qualifiers**

### **Florida-DEP**

- ! Data deviates from historically established concentration ranges
- \* Not reported due to interference
- ? Data is rejected and should not be used
- A Value reported is the arithmetic mean of two or more determinations
- B Results based upon colony counts outside the acceptable range.
- D Measurement was made in the field.
- E Extra samples were taken at composite stations
- H Value based on field kit determination; results may not be accurate.
- I The reported value is between the laboratory method detection limit and the laboratory PQL.
- J Estimated value.
- K Off scale low. The value is less than the lowest calibration standard.
- L Off scale high. The analyte is above the acceptable level of quantitation.
- M The MDL/MRL has been elevated because the analyte could not be accurately quantified.
- N Presumptive evidence of presence of material.
- O Sampled, but analysis lost or not performed
- Q Sample held beyond the acceptable holding time.
- R Significant rain in the past 48 hours (typically in excess of 0.5 inches)
- T Estimated value, less than the MDL
- U Indicates that the compound was analyzed for but not detected.
- V Indicates that the analyte was detected in both the sample and the associated method blank.
- X Insufficient individuals were present in the sample to achieve a minimum of 280 organisms for identification (Stream Condition Index Analysis only)
- Y The laboratory analysis was from an unpreserved or improperly preserved sample.
- Z Too many colonies were present, the numeric value represents the filtration volume

Results flagged with an asterisk (\*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

Service Request No J1404955

Kirk Wills  
Waste Services of Florida, Inc.  
11500 43rd Street North  
Clearwater, FL 33762

### Laboratory Results for: JED SWDF New Wells

Dear Kirk,

Enclosed are the results of the sample(s) submitted to our laboratory July 08, 2014  
For your reference, these analyses have been assigned our service request number **J1404955**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. In accordance to the NELAC 2003 Standard, a statement on the estimated uncertainty of measurement of any quantitative analysis will be supplied upon request.

Please contact me if you have any questions. My extension is 4409. You may also contact me via email at [Craig.Myers@alsglobal.com](mailto:Craig.Myers@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

A handwritten signature in black ink, appearing to read "Craig Myers".

## CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables, including results of C samples analyzed from this delivery group. When appropriate to the procedure, method blank results have been reported with each analytical test. Analytical procedures performed by the lab are validated in accordance with NELAC standards. Parameters that are included in the NELAC Fields of Testing but are not included in the lab's NELAC accreditation are identified in the discussion of each analytical procedure.

### Sample Receipt

Two water samples and two trip blanks were received for analysis at ALS Environmental on 07/08/2014. The samples were received in good condition and consistent with the accompanying chain of custody form. Samples are refrigerated at -6 C upon receipt at the lab except for aqueous samples designated for metals analyses, which are stored at room temperature.

### Volatile Organic Analyses:

Method 8260B The upper control criterion was exceeded for the following analytes in Laboratory Control Sample (LCS) J 1405036-01 and Laboratory Control Sample Duplicate (LCSD) J 1405036-02 Acrolein and Dichlorodifluoromethane. The analytes in question were not detected in the associated field samples. The error associated with elevated recovery relates to a high bias. The sample data is not significantly affected and no further corrective action was appropriate.

### Semi-Volatile Organic Analyses:

Method 8270C The control criterion was exceeded for two surrogates in LCS J 1405065-02. The associated matrix spike recoveries of target compounds were in control, indicating the analysis was in control. The surrogate outlier is flagged accordingly and no further corrective action was appropriate.

### Metals Analyses:

No significant data anomalies were noted with this analysis.

### General Chemistry Analyses:

No significant data anomalies were noted with this analysis.

### Subcontracted Analytical Parameters:

The samples were delivered to ENCO Labs in Jacksonville, FL on 07/09/2014 for EPA Methods 8141B and 8151A determination. The certified analytical report has been included in its entirety in Appendix A Subcontracted Analytical Results.

The samples were delivered to SunLabs, Inc. in Tampa, FL on 07/09/2014 for EPA Methods 505, 8081, and 8270 determination. The certified analytical report has been included in its entirety in Appendix B Subcontracted Analytical Results.

## **Data Qualifiers**

### **Florida-DEP**

- ! Data deviates from historically established concentration ranges
- \* Not reported due to interference
- ? Data is rejected and should not be used
- A Value reported is the arithmetic mean of two or more determinations
- B Results based upon colony counts outside the acceptable range.
- D Measurement was made in the field.
- E Extra samples were taken at composite stations
- H Value based on field kit determination; results may not be accurate.
- I The reported value is between the laboratory method detection limit and the laboratory PQL.
- J Estimated value.
- K Off scale low. The value is less than the lowest calibration standard.
- L Off scale high. The analyte is above the acceptable level of quantitation.
- M The MDL/MRL has been elevated because the analyte could not be accurately quantified.
- N Presumptive evidence of presence of material.
- O Sampled, but analysis lost or not performed
- Q Sample held beyond the acceptable holding time.
- R Significant rain in the past 48 hours (typically in excess of 0.5 inches)
- T Estimated value, less than the MDL
- U Indicates that the compound was analyzed for but not detected.
- V Indicates that the analyte was detected in both the sample and the associated method blank.
- X Insufficient individuals were present in the sample to achieve a minimum of 280 organisms for identification (Stream Condition Index Analysis only)
- Y The laboratory analysis was from an unpreserved or improperly preserved sample.
- Z Too many colonies were present, the numeric value represents the filtration volume

Results flagged with an asterisk (\*) indicate values outside control criteria.

Results flagged with a pound (#) indicate the control criteria is not applicable.

Percent recoveries and relative percent differences (RPD) are determined by the software using values in the calculation which have not been rounded.

**ENCO Workorder(s): A403935**

Dear Craig Myers,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Wednesday, July 9, 2014.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

A handwritten signature in black ink, appearing to read "Ronald Wambles".

Ronald Wambles

## FLAGS/NOTES AND DEFINITIONS

- PQL** PQL: Practical Quantitation Limit.
- B** Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
- I** The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
- J** Estimated value.
- K** Off-scale low; Actual value is known to be less than the value given.
- L** Off-scale high; Actual value is known to be greater than value given.
- M** Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
- N** Presumptive evidence of presence of material.
- O** Sampled, but analysis lost or not performed.
- Q** Sample exceeded the accepted holding time.
- T** Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
- U** Indicates that the compound was analyzed for but not detected.
- V** Indicates that the analyte was detected in both the sample and the associated method blank.
- Y** The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
- Z** Too many colonies were present (TNTC); the numeric value represents the filtration volume.
- ?** Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
- \*** Not reported due to interference.
- QV-01** The associated continuing calibration verification standard exhibited high bias; since the result is ND, the impact on data quality is minimal.

July 23, 2014

SunLabs Project Number: **4070902**  
Client Project Description: **J1404955**

Dear Mr. Myers,

Enclosed is the report of laboratory analysis for the following samples:

Sample Number	Sample Description	Date Collected	Date Received
4070902-01	J1404955-003 (MW-24A)	07/07/14 13:40	07/09/14 09:30
4070902-02	J1404955-004 (MW-24B)	07/07/14 14:45	07/09/14 09:30

**Narrative**

Unless otherwise noted below or in the report and where applicable:

- Samples were received at the proper temperature and analyzed as received.
- Sample condition upon receipt is reported on the chain-of-custody attached to this report.
- Results for all solid matrices are reported on a dry weight basis.
- Appropriate calibration and QC criteria were satisfactorily met.
- All applicable holding times for analytes have been met.
- Copies of the chains-of-custody, if received, are attached to this report.

QC Batch B005991 had an exception for Kepone on the LCS and LCSD. Any positive result for this analyte may be biased low.

If you have any questions or comments concerning this report, please do not hesitate to contact us.

A handwritten signature in black ink, appearing to read "Michael W. Palmer".

Michael W. Palmer  
Vice President, Laboratory Operations

**Unless Otherwise Noted and Where Applicable:**

The results herein relate only to the items tested or to the samples as received by the laboratory. This report shall not be reproduced except in full, without the written approval of SunLabs. All samples will be disposed of within 60 days of the date of receipt of the samples. All results meet the requirements of the NELAC standards. Uncertainty values are available upon request.

**Footnotes**

*U* The compound was analyzed for but not detected.

*J* The reported value failed to meet the established quality control criteria for either precision or accuracy (see cover letter for explanation)

*I* The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

*\*\** SunLabs is not currently NELAC certified for this analyte. Unless directed otherwise by client, a NELAC certified sub-contract laboratory has performed this analysis (see cover letter for details).

*LCS / LCSD* Laboratory Control Sample / Laboratory Control Sample Duplicate

*MB* Method Blank

*MS / MSD* Matrix Spike / Matrix Spike Duplicate

### Laboratory Results for: JED SWDF (New Wells)

Dear Kirk,

Enclosed are the results of the sample(s) submitted to our laboratory July 10, 2014  
For your reference, these analyses have been assigned our service request number **J1405052**.

All analyses were performed according to our laboratory's quality assurance program. The test results meet requirements of the NELAP standards except as noted in the case narrative report. All results are intended to be considered in their entirety, and ALS Environmental is not responsible for use of less than the complete report. Results apply only to the items submitted to the laboratory for analysis and individual items (samples) analyzed, as listed in the report. In accordance to the NELAC 2003 Standard, a statement on the estimated uncertainty of measurement of any quantitative analysis will be supplied upon request.

Please contact me if you have any questions. My extension is 4409. You may also contact me via email at [Craig.Myers@alsglobal.com](mailto:Craig.Myers@alsglobal.com).

Respectfully submitted,

**ALS Group USA, Corp. dba ALS Environmental**

**Client:** Waste Services of Florida, Inc.  
**Project:** JED SWDF (New Wells)  
**Sample Matrix:** Water

**Service Request:** J1405052  
**Date Received:** 7/10/14

## CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples designated for Tier II data deliverables, including results of C samples analyzed from this delivery group. When appropriate to the procedure, method blank results have been reported with each analytical test. Analytical procedures performed by the lab are validated in accordance with NELAC standards. Parameters that are included in the NELAC Fields of Testing but are not included in the lab's NELAC accreditation are identified in the discussion of each analytical procedure.

### Sample Receipt

Four water samples and five trip blanks were received for analysis at ALS Environmental on 07/10/2014. The samples were received in good condition and consistent with the accompanying chain of custody form. Samples are refrigerated at \_6 C upon receipt at the lab except for aqueous samples designated for metals analyses, which are stored at room temperature.

### Volatile Organic Analyses:

Method 8260B The upper control criterion was exceeded for the following analytes in Laboratory Control Sample (LCS) J 1405036-01 and Laboratory Control Sample Duplicate (LCSD) J 1405036-02 Acrolein and Dichlorodifluoromethane. The analytes in question were not detected in the associated field samples. The error associated with elevated recovery relates to a high bias. The sample data is not significantly affected and no further corrective action was appropriate.

### Semi-Volatile Organic Analyses:

Method 8270C The spike recovery of p-Phenylenediamine for Laboratory Control Sample (LCS) J 1405196-02 was outside the lower control criterion. The analyte in question was not detected in the associated field samples. This analyte is known to have poor extraction efficiency, therefore no corrective action was required. The data is flagged to indicate the problem.

### Metals Analyses:

No significant data anomalies were noted with this analysis.

### General Chemistry Analyses:

No significant data anomalies were noted with this analysis.

### Subcontracted Analytical Parameters:

The samples were delivered to ENCO Labs in Jacksonville, FL on 07/11/2014 for EPA Methods 8141B and 8151A determination. The certified analytical report has been included in its entirety in Appendix A Subcontracted Analytical Results.

The samples were delivered to SunLabs, Inc. in Tampa, FL on 07/11/2014 for EPA Methods 505, 8081, and 8270 determination. The certified analytical report has been included in its entirety in Appendix B Subcontracted Analytical Results.

### **Florida-DEP**

- ! Data deviates from historically established concentration ranges
- \* Not reported due to interference
- ? Data is rejected and should not be used
- A Value reported is the arithmetic mean of two or more determinations
- B Results based upon colony counts outside the acceptable range.
- D Measurement was made in the field.
- E Extra samples were taken at composite stations
- H Value based on field kit determination; results may not be accurate.
- I The reported value is between the laboratory method detection limit and the laboratory PQL.
- J Estimated value.
- K Off scale low. The value is less than the lowest calibration standard.
- L Off scale high. The analyte is above the acceptable level of quantitation.
- M The MDL/MRL has been elevated because the analyte could not be accurately quantified.
- N Presumptive evidence of presence of material.
- O Sampled, but analysis lost or not performed
- Q Sample held beyond the acceptable holding time.
- R Significant rain in the past 48 hours (typically in excess of 0.5 inches)
- T Estimated value, less than the MDL
- U Indicates that the compound was analyzed for but not detected.
- V Indicates that the analyte was detected in both the sample and the associated method blank.
- X Insufficient individuals were present in the sample to achieve a minimum of 280 organisms for identification (Stream Condition Index Analysis only)
- Y The laboratory analysis was from an unpreserved or improperly preserved sample.
- Z Too many colonies were present, the numeric value represents the filtration volume

## Acronyms

ASTM	American Society for Testing and Materials
A2LA	American Association for Laboratory Accreditation
CARB	California Air Resources Board
CAS Number	Chemical Abstract Service registry Number
CFC	Chlorofluorocarbon
CFU	Colony-Forming Unit
DEC	Department of Environmental Conservation
DEQ	Department of Environmental Quality
DHS	Department of Health Services
DOE	Department of Ecology
DOH	Department of Health
EPA	U. S. Environmental Protection Agency
ELAP	Environmental Laboratory Accreditation Program
GC	Gas Chromatography
GC/MS	Gas Chromatography/Mass Spectrometry
LUFT	Leaking Underground Fuel Tank
M	Modified
MCL	Maximum Contaminant Level is the highest permissible concentration of a substance allowed in drinking water as established by the USEPA.
MDL	Method Detection Limit
MPN	Most Probable Number
MRL	Method Reporting Limit
NA	Not Applicable
NC	Not Calculated
NCASI	National Council of the Paper Industry for Air and Stream Improvement
ND	Not Detected
NIOSH	National Institute for Occupational Safety and Health
PQL	Practical Quantitation Limit
RCRA	Resource Conservation and Recovery Act
SIM	Selected Ion Monitoring
TPH	Total Petroleum Hydrocarbons
tr	Trace level is the concentration of an analyte that is less than the PQL but greater than or equal to the MDL.

**ENCO Workorder(s): A404034**

Dear Craig Myers,

Enclosed is a copy of your laboratory report for test samples received by our laboratory on Saturday, July 12, 2014.

Unless otherwise noted in an attached project narrative, all samples were received in acceptable condition and processed in accordance with the referenced methods/procedures. Results for these procedures apply only to the samples as submitted.

The analytical results contained in this report are in compliance with NELAC standards, except as noted in the project narrative. This report shall not be reproduced except in full, without the written approval of the Laboratory.

This report contains only those analyses performed by Environmental Conservation Laboratories. Unless otherwise noted, all analyses were performed at ENCO Orlando. Data from outside organizations will be reported under separate cover.

If you have any questions or require further information, please do not hesitate to contact me.

Sincerely,

A handwritten signature in black ink that reads "David M. Camacho".

## FLAGS/NOTES AND DEFINITIONS

<b>PQL</b>	PQL: Practical Quantitation Limit.
<b>B</b>	Results are based upon membrane filter colony counts that are outside the method indicated ideal range.
<b>I</b>	The reported value is between the laboratory method detection limit (MDL) and the practical quantitation limit (PQL).
<b>J</b>	Estimated value.
<b>K</b>	Off-scale low; Actual value is known to be less than the value given.
<b>L</b>	Off-scale high; Actual value is known to be greater than value given.
<b>M</b>	Presence of analyte is verified but not quantified; the actual value is less than the MRL but greater than the MDL.
<b>N</b>	Presumptive evidence of presence of material.
<b>O</b>	Sampled, but analysis lost or not performed.
<b>Q</b>	Sample exceeded the accepted holding time.
<b>T</b>	Value reported is less than the laboratory method detection limit. The value is reported for informational purposes only and shall not be used in statistical analysis.
<b>U</b>	Indicates that the compound was analyzed for but not detected.
<b>V</b>	Indicates that the analyte was detected in both the sample and the associated method blank.
<b>Y</b>	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.
<b>Z</b>	Too many colonies were present (TNTC); the numeric value represents the filtration volume.
<b>?</b>	Data are rejected and should not be used. Some or all of the quality control data for the analyte were outside criteria, and the presence or absence of the analyte cannot be determined from the data.
*	Not reported due to interference.
<b>J-02</b>	Result is estimated due to bias in the associated laboratory control sample (LCS).
<b>J-05</b>	Result estimated, calibration verification standard failed with low bias.
<b>QL-02</b>	The associated laboratory control sample exhibited high bias; since the result is ND, the impact on data quality is minimal.
<b>QM-07</b>	The spike recovery was outside acceptance limits for the MS and/or MSD. The batch was accepted based on acceptable LCS recovery.
<b>QV-02</b>	The associated continuing calibration verification standard exhibited low bias; the reported result should be considered to be a minimum estimate.

## **Appendix B**

### **Subcontracted Analytical Results**

Craig Myers  
ALS Environmental  
9143 Philips Hwy, Suite 200  
Jacksonville, FL 33256

July 23, 2014

SunLabs Project Number: **4071103**  
Client Project Description: **J1405052**

Dear Mr. Myers,

Enclosed is the report of laboratory analysis for the following samples:

Sample Number	Sample Description	Date Collected	Date Received
4071103-01	J1405052-005	07/09/14 09:55	07/11/14 08:45
4071103-02	J1405052-006	07/09/14 10:55	07/11/14 08:45
4071103-03	J1405052-007	07/09/14 12:00	07/11/14 08:45
4071103-04	J1405052-008	07/09/14 12:30	07/11/14 08:45

**Narrative**

Unless otherwise noted below or in the report and where applicable:

- Samples were received at the proper temperature and analyzed as received.
- Sample condition upon receipt is reported on the chain-of-custody attached to this report.
- Results for all solid matrices are reported on a dry weight basis.
- Appropriate calibration and QC criteria were satisfactorily met.
- All applicable holding times for analytes have been met.
- Copies of the chains-of-custody, if received, are attached to this report.

Samples 4071103-01 (J1405052-005) and 4071103-04 (J1405052-008) had a surrogate outside of acceptable limits due to matrix interference.

QC Batch B005991 had an exception for Kepone on the LCS and LCSD. Any positive result for this analyte may be biased low.

If you have any questions or comments concerning this report, please do not hesitate to contact us.

A handwritten signature in black ink, appearing to read "Michael W. Palmer".

Michael W. Palmer  
Vice President, Laboratory Operations

**Unless Otherwise Noted and Where Applicable:**

The results herein relate only to the items tested or to the samples as received by the laboratory. This report shall not be reproduced except in full, without the written approval of SunLabs. All samples will be disposed of within 60 days of the date of receipt of the samples. All results meet the requirements of the NELAC standards. Uncertainty values are available upon request.

**Footnotes**

*U* The compound was analyzed for but not detected.

*J* The reported value failed to meet the established quality control criteria for either precision or accuracy (see cover letter for explanation)

*I* The reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.

*\*\** SunLabs is not currently NELAC certified for this analyte. Unless directed otherwise by client, a NELAC certified sub-contract laboratory has performed this analysis (see cover letter for details).

*LCS / LCSD* Laboratory Control Sample / Laboratory Control Sample Duplicate

*MB* Method Blank

*MS / MSD* Matrix Spike / Matrix Spike Duplicate

*RPD* Relative Percent Difference
