Subject: **Groundwater Monitoring Results**
Enterprise Recycling & Disposal Facility
Angelo's Aggregate Materials, Ltd.
FDEP Permit Nos. 177982-001-SC, 177982-002-SO
Pasco County, Florida

Dear Mr. Morris:

On behalf of Angelo's Aggregate Materials, Inc., Hartman & Associates, Inc. (HAI) is submitting for your review the groundwater monitoring results for the re-sampling of monitor well MW-7B at the subject site in Dade City, Florida, see Figure 1. HAI personnel were at the subject site on November 5, 2003 to the sample the above well. Copies of the field sampling sheet, chain of custody documentation, and laboratory analytical results for MW-7B are attached in Appendix A for your review.

Monitor well MW-7B was re-sampled due to the presence of phenol during the initial groundwater monitoring at the site, at a level of 11 ug/L. Phenol was detected at a concentration of 10 ug/L during the re-sampling of MW-7B. The State Groundwater Cleanup Target Level (GCTL) for phenol is 10 ug/L. The laboratory analytical results also showed a field pH exceedance of 10.84 and a laboratory analysis pH exceedance of 9.8 STD MW-7B. The previous sampling event showed a field pH exceedance of 11.05 STD.

According to Groundwater Chemicals (2nd Edition) by John H. Montgomery, phenol is typically found in antiseptics, disinfectants, epoxy and phenolic resins (in wood), as a solvent for refining lubricating oils, and as a laboratory reagent. Since the operation of the landfill has not yet commenced on this property, we believe the presence of phenol to be a pre-existing condition at monitor well MW-7B. Some of the potential sources of phenol near the site are the closed East Pasco County Landfill to the north, the Larkin Cemetery (due west of the site), and the Seaboard Coast Line Railroad (due west of the site, near SR 35A). Although those sites are not close, it should be noted that groundwater can potentially flow at rapid rates from distant contamination sources via fracture or conduit in the karst limestones of the Floridan aquifer. The next sampling event will occur in January 2004.

We trust this submittal will satisfy the Department's requirements. Please call us if you have any questions.

Very truly yours,

Hartman & Associates, Inc.

W. Bruce Lafrenz
Senior Hydrogeologist/Associate

DEC 19 2003
Southwest District Tampa

HAI # 99.0331.007-2 NAME: WJB/HLC

PROJECT NAME: Enterprise Rd L.A. DATE: 11/5/03

PROJECT LOCATION: Dade City, Fla.

TIME	COMMENTS
0830	Arrived on site, began set-up at MW-8. Decon'd equipment accordin to DEP SOP procedures, determined purge volume, installed new poly tubing. Calibrated field meter (Horiba U-10) as follows:
	parameter — standard / Actual
	ph — 4.00 / 3.99
	cond — 4.49 / 4.50 ms/cm
	turb — 0 / 0 NTU's
	D.O. — 8.41 / 8.74 mg/L
	temp — 24°C / 23.6°C
0907	Began purge (See Water Sampling Log for details)
0929	Well purged dry after ~ .75 gals. will allow to recover and sample. Left well to recover and proceeded to MW-7B and began set-up.
1005	Began purge (See Water Sampling Log for details) Parameters did not stabilized during 1st 3 consecutive readings. Continued to purge well until parameters were within SOP required readings.
1220	Completed Sampling. Samples on ice. Left site for Lunch
1310	Back on site on MW-8 to pull sample
1330	Completed sampling MW-8, Samples on ice, proceeded to MW-10 location. Will purge dry immediately last event and W.L. was lower this time. Used bailer to purge well. Well went dry after ~ .3 gals.
1420	Attempted to sample well MW-10. During last sampling event, attempted purging well with a peristaltic pump, was unsuccessful due to depth to to water which was 37.72' btoc. Peristaltic pump was unable to lift water from that deep. Inserted a 1.5" groundfos and was unable to stabilize pumping rate with drawdown (well pumped dry almost

TIME	COMMENTS
	immediately). Based on attempts during last event, we attempted purging/sampling this event using a new 12" bailer, following procedures in DEP-SOP-001/01, FC 2200, pg 2.1. After 3 passes with the bailer, well was dry. Allowed to recover 20 minutes and checked WL, had recovered only .09' (9 hundredths) Given estimated time to recover (~ 7 hrs) and ~~amount of~~ volume required to fill sample jars (~.75 gal), we would spend ~ 21 hours attempting to sample well MW-10. Talked it over with Project Manager (Jennifer Deal) and decided not to sample MW-10 due to insufficient volume of GW in well and slow recovery time once purged dry.
	Proceeded to completed water level Readings before Sampling next well.
1515	Completed Round of water levels on all wells.
1530	Left site
