

September 14, 2015

To Whom It May Concern:

On September 14, 2015 a walk though was completed by Fanning Springs Fire Rescue at Advanced Tire Recycling, 8369 SW County Road 313. During this visit we again observed the active progression of compliance with the DEP's last site visit's new recommendations. We noted that the isles were clear and access in and around the tires was provided. Tires were in the process of being moved to recommended locations. Fire extinguishers were readily available, marked and annual maintenance was up to date. The owner agreed to relocate some of the trailers back to previous positions that complied with our earlier recommendations.

We appreciate the owner's willingness to work with the fire department in mitigating as many hazards as possible within their control. Feel free to contact us with any questions or concerns.

Sincerely,

Ron McQueen
Chief, Fanning Springs Fire Rescue
