COMMENTS:

Permit 0297136-WT issued 2/6/19 and expires 4/7/24

The anticipated planned daily throughput is 60 tons per day and the planned annual throughput is 21,900 tons per year.

Annual fire safety-survey had been recently conducted at the site, the facility was awaiting the finalized report and will submit it with the next quarterly waste tire report.

The facility shall not exceed 80.4 of whole waste tires stored at one time. They keep an electronic tracking system of how many tires are received and burned to ensure compliance with this limit. The quantity of tires received is tracked and at the end of the 1st quarter approximately 22.2 tons of tires were on-site. No tires were burned in February or March due to issues with the equipment. Once fixed, the facility plans to begin operations again.

During the inspection, waste tires were stored inside of three (3) trailers and on the tire handling conveyor system. Each trailer holds approximately 13 tons of tires. Tires were not being processed at the time of inspection.

Please ensure that a copy of the fire-safety survey is made part of the next quarterly report. Also ensure that the emergency preparedness manual is on-site and accessible to all employees.
