**12.0 - SECTION 12.0 - WTE FACILITIES**

## Requirements:

The requirements listed in this section provide an opportunity for the Department's inspector to indicate the conditions found at the time of the inspection. A "Not Ok" response to a requirement indicates either a potential violation of the corresponding rule or an area of concern that requires more attention. Both potential violations and areas of concern are discussed further at the end of this inspection report.

**COMMENTS:**

A routine operations inspection was conducted for this complex. The Lee County Resource Recovery Facility (LCRRF) has five (5) active permitted or registered solid waste processes at this location (waste to energy, construction & demolition - C&D - materials recovery, source separated organic processing facility (SOPF), waste tire collection and solid waste transfer station). Each of these processes were evaluated during this inspection.

## Waste to Energy:

The waste to energy plant was in operation during this inspection. Ferrous metals that make it through the furnace are recovered, processed (shaken to remove ash residue) and shipped to Allied Metals, Arcadia, Florida. Non-ferrous metals are recovered, processed and sent to a recycling facility in Pennsylvania. Ash is shipped to the Lee/Hendry Ash Monofill. There were no issues or violations noted in this area at the time of inspection.

## C&amp;D Debris Materials Recovery Facility:

Mixed C&D loads are received directly at the material recovery facility. Each load is inspected by a trained spotter. The mixed loads are dumped at the west end of the recovery line and placed on the conveyor belt by a track-hoe. Recyclable materials are manually recovered and separated into like materials and shipped to

downstream recyclers for further processing. Resulting waste materials are deposited on the east end of the recovery line and taken to the waste to energy plant for disposal. While in this area, a review was conducted with the unit manager on how facility personnel detects questionable or potentially unacceptable waste. The manager explained each load is manually inspected by trained facility personnel before and while they are being unloaded. If any suspicious or questionable waste is seen, the waste is isolated and the driver is questioned regarding the source of the C&D wastes. If it is deemed unacceptable at the MRF, the waste is reloaded on the truck that was used to deliver it to the facility. There were no issues or violations noted in this area at the time of the inspection.

#### Solid Waste Transfer Station:

The transfer station was in operation during this inspection. Solid waste was actively being consolidated for shipment to the Lee/Hendry Landfill for disposal. There were no issues or violations noted in this area at the time of inspection.

#### Waste Tire Collection Area:

At the time of inspection, there were less than 100 waste tires observed on the waste tire collection pads. A recent shipment had been made to Garden Street Iron & Metal for processing. There were no issues or violations noted in this area at the time of inspection.

#### Source Separated Organic Processing Facility (SOPF):

There are two locations to deposit incoming loads of yard trash for the SOPF area. The west side of the area collects bulk yard waste mainly from professional landscapers and county maintenance. The east side collects yard trash from domestic (residential and commercial) collection. This area sometimes receives yard trash in plastic bags. The bags are manually removed by Lee County Solid Waste personnel and the plastic is disposed of in the WTE facility. There were no issues or violations noted in this area at the time of inspection.

A review of the overall surface water management system was conducted. Lee County provided a narrative description of the approved surface water management system.

There were no issues or violation for any areas evaluated during this inspection.
