**Subject:** Trail Ridge Landfill - Request for Technical Water Quality Report Due Date Extension WACS ID 33628  
**Date:** Thursday, September 24, 2020 2:38:35 PM

---

We are currently working on both the 2H 2020 semiannual water quality report and the 2.5 year technical report. The 2.5 year report must include the data from the 2H 2020 semiannual. The solid waste permit specifies the technical report is due September 30, 2020 and that semiannual reports are due 60 days from the receipt of data from the laboratory. The 2H 2020 sampling was conducted August 10-12 and we received the data from the lab on August 26, 2020, making the semiannual report due date October 26, 2020. Based on review of the data, TRLF elected to resample several wells to verify detections. The resampling occurred on September 21, 2020. We have not received the resampling data from the laboratory yet and would like to include it in the Technical Report.

On behalf of Trail Ridge Landfill, Inc., we are requesting the Department allow both the 2.5 year technical report and 2H 2020 semiannual report to be submitted NLT October 26, 2020. This will allow sufficient time to receive and review the data both from the initial August sampling event and September resampling event and incorporate both into the technical report.

Please let me know if this is acceptable or if you have any questions. Thanks
