Pre-existing Area Of Concern:

Rule: 62-701.620(9), 62-701.510(2)(b)

Question Number: 2.39

Explanation: During the inspection facility staff could not locate all of the piezometers listed in the monitoring plan. PZ-9 and PZ-11 should be in place along the East slope of Phase I, but these piezometers could not be located during the inspection.

Corrective Action: DEP is anticipating the submittal of an application for closure of Phase I in October of 2008. Due to the imminence of closure, the intended function of these piezometers is less critical and may not be needed. However should closure of Phase I be delayed, the DEP may ask that these piezometers be reinstalled and that the monitoring of them be resumed.

Overall the facility has much improved. Phase I has sufficient cover and grading. Phase II is being filled in sequence, and the working face kept a manageable size. The leachate collection system is being properly operated and the metering equipment is functioning as intended. Monitoring submittals are current and the on-site paperwork was in order.
