*Subject: ADaPT File Reviews for Citrus County*

I received two separate sets of ADaPT files from Test America for the 2009 Second Semi-annual sampling event for the Citrus County Landfill. The first report contains the files associated with the sampling performed in July and the second report contains the files associated with the re-sampling performed in August. I have completed my review of both sets of ADaPT files.

There are several errors of code in both the lab EDD files and in the WACS upload errors string. The Lab EDD files contain over 1000 errors and the WACS uploads strings have approximately a dozen error code 6 and error code 7. None of the errors are critical.

I have reviewed these errors and determined that they have no significant impact on either the objective or the results of the sampling event. The results are valid.

Due to time constraints, I recommend the following course of action:

- Submit the EDD and Lab EDD to FDEP for the purpose of FDEP's data upload.
- Have a proper file naming methodology for future electronic reports.
