Subj: **Quarter III 2010 Groundwater Monitoring Report**
Sumter County Closed Class I Landfill
Sumter County, Florida
FDEP Permit No. 22926-003-SF

Dear Mr. Morris:

On behalf of Sumter County Board of County Commissioners, The Colinas Group, Inc. (TCG) herewith submits one (1) copy of the report prepared by TCG entitled:

**Sumter County (Closed) Landfill Quarterly Groundwater Monitoring Report,
Quarter III (August) 2010**

The report was prepared and is submitted in satisfaction of part of the requirements of the Sumter County Closed Landfill Long-Term Care Permit. If you have any questions concerning the contents of the report please do not hesitate to contact me at your convenience.

cc: Ms. Denise Warnock (Sumter County)
Mr. Jimmy Wise (Sumter County)

**Sumter County (Closed) Landfill
Quarterly Groundwater Monitoring Report
Quarter III (August) 2010**

INTRODUCTION

The Colinas Group, Inc. (TCG) has reviewed the groundwater monitoring well sampling and analytical results for the Quarter III 2010 sampling event at the Sumter County (Closed) Landfill near Lake Panasoffkee in Sumter County. The sampling event was completed in accordance with the quarterly water quality monitoring and reporting requirements of the closed landfill Long -Term Care Permit #22926-003-SF.

The Groundwater Monitoring Plan for the closed landfill was amended in 2004 to replace three (3) existing monitoring wells deemed unsuitably located with respect to closed solid waste disposal areas. Existing wells MW-1, MW-7 and MW-9 were replaced by installation of new wells MW-11, MW-10 and MW-9A, respectively. The existing wells continue to be used as water level measuring points (piezometers).

New monitoring wells MW-4A and MW-4B, installed as part of a Preliminary Contamination Assessment completed at the landfill in January 2006, were added by the Florida Department of Environmental Protection (FDEP) to the facility groundwater monitoring network in May 2006. Groundwater sample analytical results for these new wells are included in this report. The current array of groundwater monitoring wells and piezometers at the facility is shown on Figure 1 (Attachment 1).

In accordance with Specific Condition 16d of the facility Long-Term Care Permit, sampling and analytical chemical parameters for this sampling event included the normal list of quarterly monitoring parameters. The Long-Term Care Permit requires an expanded parameter list, to include 40 CFR Appendix II parameters, during Quarter IV of each year.

SAMPLING EVENT

The Quarter III 2010 sampling event at the Sumter County Landfill occurred on August 12 and 13, 2010. Sampling was performed by TCG personnel in accordance with the FDEP Standard Operating Procedures (SOP) for Field Activities. Water samples collected from the facility groundwater monitoring wells were tested for the required field parameters. Monitoring wells were purged and the groundwater discharge allowed to stabilize prior to sample collection.

The results of field testing were recorded on Groundwater Sampling Logs (Attachment 3) and are listed in Table I. All samples were preserved and stored as required prior to shipment to the analytical laboratory. Laboratory analytical services were provided by Advanced Environmental Laboratories, Inc. (AEL) in accordance with the laboratory's NELAC and FDHRS Certification No. E53076, E84589, and E82574. The original analytical reports prepared by AEL are presented in Attachment 2 to this report.

Water table depth measurements in each facility groundwater monitoring well and piezometer were recorded on August 13, 2010. These measurements were used to develop the Groundwater Contour Map shown on Figure 1 (Attachment 1) for the uppermost receiving groundwater aquifer beneath the site. Depth to water table measurements and corresponding groundwater elevations are listed in Table II.

Decommissioned monitoring well **MW-9**, currently used only for water level measurements, was found to be damaged. The well has apparently been struck by a large moving object, most likely a grass mower, and partially pulled from the ground. The well is filled or plugged with soil and a water level measurement was not possible.

RESULTS

Field Tested Parameters

Results of field testing completed at groundwater monitoring wells for the August 2010 sampling event are summarized in Table I. Field tests were completed by TCG sampling personnel in strict accordance with the FDEP SOP requirements using properly calibrated field instruments (see Attachment 5).

pH

The field testing results indicate pH of groundwater in the uppermost aquifer was within the FDEP secondary standard (6.5 - 8.5 pH units) at eight (8) of the nine (9) groundwater monitoring wells sampled. The nearly neutral to slightly basic pH values measured are consistent across the landfill property and appear normal considering the monitoring well screen intervals at and near the top of carbonate rocks and sediments. One well (**MW-4B**) produced water with a pH above the upper FDEP range at **8.63** pH units. This well has consistently produced pH values above 8.5 since sampling of the well began in Quarter II of 2006.

Fluid Temperature

Temperature of each water sample was measured in the field immediately following discharge into the flow cell used to accept flow from the purging pump. Temperature measurements of groundwater from the monitoring wells ranged from a low of 24.80 C at well **MW-8** to 27.44 C at **MW-2**.

Dissolved Oxygen

Dissolved oxygen (DO) exceeded the FDEP sampling guidance level of 20% saturation at five (5) of the nine (9) monitoring wells sampled, including the facility background monitoring well **MW-6A**. These wells consistently produce groundwater with elevated DO concentrations.

Specific Conductance

Specific conductance of groundwater samples collected during this sampling event are included in Table I. Specific conductance values varied through a relatively narrow range of 130 umhos/cm to 883 umhos/cm. Lowest specific conductance was measured at well **MW-4B**. Highest specific conductance was measured at detection well **MW-9A**.

Turbidity

The FDEP recommends attainment of turbidity values less than 10 to 20 NTUs in groundwater samples obtained from monitoring wells. As shown in Table I, groundwater samples collected at all wells had measured turbidity values less than 20 NTUs. Fluid turbidity at all wells was less than 10 NTUs.

Regulatory Exceedances

A summary of groundwater laboratory analytical results for the August 2010 sample set is presented in Table III. As shown, six (6) analytical parameters were reported for certain monitoring wells at concentrations that exceed applicable regulatory levels. Exceeded parameters were aluminum, iron, manganese, nitrate nitrogen, radionucleides and total dissolved solids.

Aluminum

Aluminum was detected at concentrations above the Florida Secondary Drinking Water Standards (FSDWS) MCL (200 ug/l) in samples from four (4) monitoring wells: **MW-4B** (450 ug/l), **MW-9A** (420 ug/l), **MW-10** (540 ug/l), and **MW-11** (840 ug/l). Aluminum was detected by the laboratory at concentrations below the MCL at the remaining monitoring wells.

Iron

Dissolved iron was detected in two (2) monitoring wells at concentrations above the FSDWS MCL of 300 ug/l. Iron was reported at 620 ug/l at well **MW-9A** and 630 ug/l at **MW-10**. Iron was detected at concentrations less than 300 ug/l at three (3) other wells, and was below the laboratory MDL at the remaining monitoring wells.

Manganese

Manganese was reported above the FSDWS MCL of 50 ug/l in monitoring well **MW-9A** at 75 ug/l. Manganese was detected in all other wells at concentrations below the MCL 50 ug/l.

Nitrate Nitrogen

Nitrate was reported slightly above the 10 mg/l FPDWS MCL at monitoring well **MW-4A** at 11 mg/l. Elevated nitrate levels less than the MCL are noted in well MW-4 at 8.1 mg/l and the facility background monitoring well **MW-6A** at 6.5 mg/l. Nitrate was reported at significantly lesser values in the remaining monitoring wells.

Radionuclides

The sum of gross alpha plus radium 226/228 (corrected for the negative error range) reported for **MW-11** (16.1 pCi/l) slightly exceeded the drinking water standard MCL of 15 pCi/l.

Total Dissolved Solids (TDS)

TDS is reported at **MW-9A** just above the 500 mg/l MCL at 520 mg/l. TDS in other wells ranged from 88 mg/l to 440 mg/l.

No other exceedance of a parameter regulatory concentration level was reported in the laboratory analytical results for samples from groundwater monitoring wells at the Sumter County Closed Landfill.

Other Detected Parameters

Ammonia was detected in groundwater samples from two (2) monitoring wells (**MW-9A** and **MW-10**) at concentrations less than the FPDWS MCL of 2.8 mg/l. Ammonia was reported below the laboratory MDL in the remaining wells.

Antimony was detected in groundwater samples from seven (7) monitoring wells at concentrations ranging from 0.12 ug/l to 0.54 ug/l, well below the FPDWS MCL of 6 ug/l. Antimony was reported below the laboratory MDL in remaining monitoring wells.

Cadmium was detected in groundwater samples from two (2) monitoring wells (**MW-9A** and **MW-11**) at concentrations less than the FPDWS MCL. Cadmium was reported below the laboratory MDL in remaining monitoring wells.

Chloride was detected in groundwater samples from all monitoring wells at levels well below the FPDWS MCL of 250 mg/l. Chloride ranged from 1.7 mg/l to 25 mg/l.

Chromium was detected at all wells, including the facility background well (**MW-6A**), at low concentrations below the MCL (100 ug/l) for this constituent.

Lead was detected in seven (7) monitoring wells at levels well below the FPDWS MCL of 15 ug/l. Lead in these wells ranged from 0.15 ug/l to 0.68 ug/l. Lead was reported below the laboratory MDL in remaining monitoring wells.

Mercury was detected at 0.55 ug/l in monitoring well **MW-9A** and at 0.040 ug/l in **MW-11**, well below the FPDWS MCL of 2 ug/l, and was less than the laboratory method detection limit in samples from remaining wells.

Sodium and **chloride** concentrations reported for seven (7) of the nine (9) monitoring wells appear consistent between individual wells and typical for natural shallow groundwaters in Florida. Although significantly below respective regulatory MCLs, sodium/chloride concentrations at monitoring wells **MW-4**, **MW-4A**, and **MW-9A** are somewhat elevated above concentrations measured in samples from other monitoring wells.

Thallium was reported at low concentrations in three wells: **MW-4** (0.11 ug/l), **MW-4A** (0.27 ug/l) and **MW-9A** (0.20 ug/l). The FPDWS MCL for thallium is 2 ug/l. All other wells were reported below the laboratory MDL.

SUMMARY

Chemical characteristics of groundwater monitored at the Sumter County Landfill are reported for the Quarter III 2010 sampling event. Exceedances of specific constituent regulatory levels and MCLs are reported at specific monitoring wells for **aluminum**, **iron**, **manganese**, **nitrate nitrogen**, **radionucleides** and **TDS**.

Elevated **dissolved oxygen (DO)** levels were measured in five of the nine groundwater monitoring wells, including the facility background monitoring well. Prior sampling data indicate that elevated DO levels occur frequently and in many of the same monitoring

wells, suggesting that high DO in groundwater at these locations is likely a natural condition.

Aluminum was detected in samples from four wells (**MW-4B, MW-9A, MW-10, and MW-11**) at concentrations above the FSDWS MCL of 200 ug/l. Aluminum was detected below the MCL in remaining monitoring wells, including the facility background well **MW-6A**. The most likely source of aluminum measured in groundwater samples is natural deposits of aluminum-silicate clay minerals within and near the groundwater monitoring zone tapped by wells at the landfill.

Gross alpha radioactivity, including the sum of radium 226/228, exceeded the 15 pCi/l MCL in a groundwater sample from well **MW-11**, reported at a range of 16.1 - 22.5 pCi/l. Gross alpha individually is reported to range from 13.1 - 17.7 pCi/l in the groundwater sample.

Manganese was reported above the FSDWS MCL in the sample from **MW-9A**, one of the more recently-constructed monitoring wells. **Iron** was detected slightly above the FSDWS MCL in wells **MW-9A** and **MW-10**. Both of these elements occur naturally in sediments and carbonate rocks penetrated by the monitoring wells.

Nitrate nitrogen dissolved in groundwater was reported above the FPDWS MCL of 10 mg/l at well **MW-4A** (11 mg/l). As shown on the groundwater contour map for the May 2010 sampling event (Figure 1) well **MW-4A** was upgradient of well **MW-4** and the closed landfill waste disposal areas. Elevated concentrations of nitrate nitrogen were also reported at background well **MW-6A** and at all but one of the remaining monitoring wells at levels considered above naturally-occurring nitrate concentrations typically found in groundwater in Florida.

RE: Workorder: A1004699 Sumter County Landfill

Dear Rick Potts:

Enclosed are the analytical results for sample(s) received by the laboratory on Friday, August 13, 2010. Results reported herein conform to the most current NELAC standards, where applicable, unless otherwise narrated in the body of the report. The analytical results for the samples contained in this report were submitted for analysis as outlined by the Chain of Custody and results pertain only to these samples.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Sheila Wilcox

Note: 1) Used a graduated 5 gallon bucket and timed to measure purge volumes.
2) Packed samples on ice immediately upon collection.

MATERIAL CODES: AG = Amber Glass; CG = Clear Glass; PE = Polyethylene; PP = Polypropylene; S = Silicone; T = Teflon; O = Other (Specify)

SAMPLING/PURGING APP = After Peristaltic Pump; B = Bellier; BP = Bladder Pump; ESP = Electric Submersible Pump; PP = Peristaltic Pump
EQUIPMENT CODES: RFPP = Reverse Flow Peristaltic Pump; SH = Shear Method (Tubing Gravity Drift); VT = Vacuum Trap; O = Other (Specify)

Note: 1. The above do not constitute all the information required by Chapter 62-100, F.A.C.

2. STABILIZATION CRITERIA FOR RANGE VARIATION OF LAST THREE CONSECUTIVE READINGS (SEE FS 2212, SECTION 3H): ± 0.2 units; Temperature: ± 0.2 degrees C; Specific Conductance: ± 5%; Dissolved Oxygen: all readings ≤ 20% saturation (see Table FS 2200-2), optionally, ± 0.02 mg/L or ± 10% (whichever is greater); Turbidity: all readings ≤ 20 NTU, optionally ± 5 NTU or ± 10% (whichever is greater).

SAMPLING DATA

SAMPLED BY (PRINT) / AFFILIATION: H. L. Claytor, Collins Group, Inc.		SAMPLE(S) SIGNATURES <i>H. L. Claytor</i>	SAMPLING INITIATED AT: 1000	SAMPLING ENDED AT: 1010				
PUMP OR TUBING DEPTH IN WELL (in):		SAMPLE PUMP FLOW RATE (ml. per minute): < 250 mL	TUBING MATERIAL CODE: PE

		Various	Various	Various	None	--	Appendix I Parameters	ESP

REMARKS:

Field decorated SS 250, WL probe and 3 gallon PE bucket down
DEP 508 001/01, LC 1000. Placed SS 250 and WL probe in PE
bucket and poured 1 gallon of DI water over 250 and WL
probe. Started pump and pumped DI water through 1, pump
and over WL probe for ~2 minutes then collected EBB sampler

Notes: 1) Use a graduated 5 gallon bucket and tared to measure purge volumes.
2) Pack samples on ice immediately upon collection

MATERIAL CODES: AG = Amber Glass; CG = Clear Glass; PE = Polyethylene; PP = Polypropylene; S = Silicone; T = Teflon; O = Other (Specify)

SAMPLING/PURGING APP = After Peristaltic Pump; B = Boiler; BP = Bladder Pump; EPP = Electric Submersible Pump; PP = Peristaltic Pump
EQUIPMENT CODES: BFP = Borehole Flow Peristaltic Pump; SM = Slope Method (Turbine Gravity Design); VT = Variable Trans.; O = Other/Reservoir

EXCITATION CAUSES: RFFF = REVERSED FLOW FLAME & FROST. SRF = SWIRL FLAME.

Notes: 1. The above do not constitute all the information required by Chapter 62-100, F.A.C.
2. STAFF POSITION STATEMENT AND SOURCE LISTING ARE NOT THE SAME. CONSULT THE APPENDIX FOR THE REQUIREMENTS FOR A STAFF POSITION STATEMENT.

2. STABILIZATION CRITERIA: PORT RANGE VARIATION OF LAST THREE CONSECUTIVE READINGS (SEE FS 2211, SECTION 3H): ± 0.2 mbar; Temperature: ± 0.2 degrees C; Specific Conductance: $\pm 5\%$; Dissolved Oxygen: all readings $\leq 20\%$ saturation (see Table FS 2200-2), optionally, $\pm .02$ mg/l or $\pm 10\%$ (whichever is greater); Turbidity: all readings < 20 NTU, optionally ± 5 NTU or $\pm 10\%$ (whichever is greater).
